On the return home a short stop was made at the two herds referred to by his father, and here he saw many great cows of wonderful capacity. He noticed that they had wonderfully well-lighted barns on their farms, and he saw their advantage, knowing that tuberculosis, that dread disease among cattle, would not thrive in plenty of light. He also noticed that the calves were provided with nice healthy pens, where the sun in winter could reach them. These stables were not especially expensive, but they were sanitary, furnishing absolutely necessary conditions for producing the best grade of milk. The stables were clean, the cattle free from dirt and dust, and though kept in during the day in this hot July weather on account of flies, they were in clean, healthful surroundings. These two farms sold milk to a very particular trade, one of them shipping to New York City. Recent years have seen patrons of milk-producers calling for far more care in milk-production, giving them an essentially germ-free milk. To show how particular some buyers are, Mr. Frith showed John a letter, of which the following is a copy:

"Please ship me two quarts of pasteurized milk from a cow whose bag has been washed in peroxide hydrogen and wrapped in antiseptic cotton during the heat of the day. I desire this from a cow that is given distilled drinking water, and is fed microbe-disinfected meadow grass, free from noxious weeds. Also see that her temperature is down to 80° F. when she is milked. See that the stable is thoroughly disinfected daily."

These herds showed strikingly the effects of careful breeding. He noticed the bulls used were short-legged and strong-bodied, with much quality. He found that the owners used sires from dams that had udders of very superior shape, and they stated that the daughters of these bulls tended to reproduce through them the mother's characteristics. Bogswell brought out a ring of four grand cows. He called them "The Big Four," and lined them up for his inspection, udders toward him. He marveled at their size and apparent capacity. The owners laid much emphasis on the part the bulls played in fixing this type. Bogswell more than once said: "Mr. Winslow, the bull is more than half the herd; yes, sir, more than half the herd."

John reached home after ten days of what seemed to him to be a most profitable and enjoyable trip. At the supper table that night he began the story of that journey, and the lights didn't go out in the sitting-room till far later than was common in the Winslow family. "John," said the old man, "what made the biggest impression on you in that dairy-cattle barn at the fair?" "The dairy type," said John. "I was satisfied after my inspection that these smooth, meaty cows could not do the business we want done."

Later that fall the final report on this exposition herd of ten different breeds was made. The father, after supper one night, pulled the wrapper from his "Dairy Intelligencer" and read the results of the test. Looking it over, he said: "John, your judgment on the exposition cows was good. Hear this from the report about results: A Guernsey, Mary Marshall, produced in six months a butter profit of \$59.49, ranking first. A Red Poll cow, named Mayflower, of a very milky type, which I remember you especially told about, stood second, her hutter making a profit of \$52.10. Excepting for this one case, the other cows of the first ranking ten were all cows of dairy breeds. Where the total record of five cows in each breed is recorded, I see that they show the Guernsey first, with butterfat worth \$230; the Jerseys second, with \$225 credit; the Ayrshire third, with \$218; and the Holsteins fourth, at \$211. From the hutter point of view, the dairy breeds beat the others out of their hoots. We had better stick to our type and work deeper into the breed, my son." "Yes, father," said John; "I believe it is absolutely essential, if we are to get the very best dairy results from our herd, that we must stick to cow type and never lose sight of its importance."

(To be continued.)

A magnificent steel engraving of Hagerman Pass, the most famous mountain pass in Colorado, has been issued by the Colorado Midland Railway. This engraving is 26 by 40 inches and suitable for framing. It will be sent to any address on receipt of 15 cents in stamps by Morell Law, traveling passenger agent, 566 Sheildley Bldg., Kansas City, Mo., or C. H. Speers, G. P. A., Denver, Colo.

The school of thoughtlessness has many graduates.

The Poultry Yard

Conducted by Thomas Owen.

Theory vs. Practice.

The Biblical injunction to "Prove all things; hold fast to that which is good" applies to poultry matters fully as much as to religious affairs. A noted writer on poultry matters early this season advanced a new theory concerning freshly-laid eggs being unhatchable. He claimed that an egg taken from a hen as soon as laid and placed in an incubator would not hatch; that the animal heat in the egg had first to be eliminated from the egg and after cooling a day or two it would hatch all right. He had other reasons to advance for his theory. Now the writer had always surmised that the fresher the egg was the more surely it would hatch, but never having tested the matter he thought perhaps that this new theory might be all right. However, he determined to see for himself, being of the tribe of Doubting Thomas. He took an egg just laid, still warm, out of the nest and placed it in an incubator, and behold it was the very first egg to pip and it hatched out a strong, healthy chick. The next time he set his incubator he took several freshly-laid eggs and placed them therein and after marking them, watched the results. The rule was that they were the ones that pipped the soonest and of course hatched the soonest. So much for this man's very elaborately woven theory.

Another old theory used to be that when eggs for hatching are shipped a distance from home, they should be allowed to rest for at least twenty-four hours before setting under a hen. A great many poultry-breeders still advise their patrons to give the eggs a good rest before giving them to the hens, so as to settle the eggs after their rough usage on the journey. It was only a theory and does not hold good in practice. The eggs will have resting enough in the nest, and the sooner they are placed there after their receipt, the sooner you will have young chicks.

Another old theory was that you should feed young chicks just as soon as they come out of the shell. This has been exploded and now well-posted raisers of poultry rarely feed them anything for thirty-six or forty-eight hours after hatching and some go so far as to say seventy-six hours will not hurt them.

Another theory was that the very first thing to give young chicks was hard-boiled eggs, the most indigestible food you could give them. But as practical tests are made from time to time, all these fine-spun theories are exploded into the air and our feet are placed on the foundation of solid facts.

Poultry Notes.

In answering an inquiry relating to turkeys in last week's KANSAS FARMER, the types made us say "State Turkeys." We wrote slate but probably our 1 and 2 were so nearly alike, that the compositor could not distinguish one from the other. The name slate is given the turkeys on account of their color, being slate-colored.

After the hatching of chicks comes the raising of them, and the latter is more important than the former. One great cause of mortality among chicks is the exposure to sudden rain storms resulting in the drowning of thousands and the stunting of tens of thousands. When a rain storm comes up see that they are gotten under shelter before the storm breaks.

If you are having poor success with your incubator hatches, try manipulating the eggs more than you have been doing. Change their positions from one end of the tray to the other and from the sides to the center and ruffle them around so that they are in a different position each time you turn them, and that ought to be twice each day. The writer found a decided improvement in the hatches where he had handled them considerably, over the others where he had not disturbed them so much.

Rearing the Farm Turkey.

MRS. ANDREW BROOKS.

It has been my experience that the louse is one of the greatest drawbacks to successful turkey-raising. If turkeys have access to the same runs or buildings as hens, they are quite sure to be thus afflicted and the pests increase faster than on hens, and many puzzling losses among the young stock may be traced to that source. I take no

POULTRY BREEDERS' DIRECTORY.

FOR SALE—Choice Light Brahma eggs, \$1 for 15; \$1.75 for 30. Wm. Plummer, Barclay, Kan.

EGGS FOR SALE—Buff Rocks exclusively. Farm range, 50 cents for 15; \$3 per 100. F. S. Lovelace, Muscotah, Kans.

ROSE COMB BROWN LEGHORN EGGS, 15 for \$1.50 for 30, 100 for \$4. Mrs. John Holzhey, Benden, Kans.

EGGS FOR HATCHING—From one of the best laying strains of S. C. Leghorns in the West, 15 for \$1.50 eggs, both brown and white. Special prices on larger lots. L. H. Hastings, Quincy, Kansas.

BARRED ROCKS and Silver Faced Wyandottes. Having hatched all the chicks I wish, will sell eggs from my high scoring pens at \$1.25 per 15; utility eggs at 5 cents each. Mrs. Chas. Ostorn, Eureka, Kans.

BARRED ROCK EGGS—Heavy winter laying strains. Pen No. 1, \$1.50 per 15. Pen No. 2, \$1 per 15; \$5 per 100. Mrs. W. H. Schreier, Aragona, Kans.

Kansas Chick Feed
For baby chicks, a balanced ration which makes the little fellows healthy, hearty and happy. Price, 25 pounds for \$1. Our Kansas Lice Killer is guaranteed to kill the lice; 5 packages for \$2, prepaid. W. E. Smith, Osborne, Kansas.

chances on that score but dust the birds once each week while sitting and just as often after hatching, until the young turkeys are well feathered and are noticed freely dusting themselves in fresh earth. After this insects will not cause further trouble.

If the turkey should want to sit in an inconvenient place, like the henhouse, I do not molest her for a few days until the incubating instinct is strong and not easily broken up. Then at night, I move her to some place where she will be undisturbed. An unused barn-floor is a good place. There food, grit, and water may be left, allowing her to come off at will. Sprinkle the eggs with warm water the last few days before hatching, and watch to see that the old bird does not leave the nest too soon.

Sometimes the first poult to hatch will fall out of the nest and their peeping may cause her to leave before all are out. In such cases wrap them warmly in flannel and keep by the kitchen fire. No food will be needed the first two or three days. Stale bread-crums squeezed from sweet milk is the best food, gradually getting them into johnnycake by the time they are a week or ten days old. Light feeding will suffice, as there is danger of overfeeding or making them lazy. Once or twice a day lettuce, dandelions, or onion-tops should be cut up and fed with the cake, using one-fourth or one-third in bulk of the green food.

I have never had much luck cooping the young turkeys. If confined only a few days they would lose strength and droop. I now place them on the part of the farm where it is desired they should range, preferably in a pasture, where the grass is short. They are not let out in the mornings when small, until the dew is off unless the grass is very short.

When the turkeys are small the mother will not bring them home, so every afternoon about 5 o'clock, or earlier on cloudy days, I go after them. By waiting too long they will be located for the night and difficult to find unless their roosting place is known. They may usually be found at nearly the same place, since they take much the same route each day.

The automobile is making its way to the ends of the earth. In the upper part of Transkei (Kaffirland) a service of motor cycles has recently been established, ridden by natives, to carry the mails from Mount Frere to the outlying stations, and up on to Kokstadt, a distance of seventy miles.

Make yourselves nests of pleasant thoughts. None of us as yet know what fairy palaces we may build of beautiful thought—proof against all adversity.—Ruskin.

The Great American Hen. The greatest thing in the United States to-day is the hen. Her portrait "rampant" ought to appear on every dollar, half, quarter and dime that Uncle Sam puts out; for the actual fact is "Biddy's" business brings in more of these same dollars, halves, and quarters than any other single—and I might almost say double—American industry. Three hundred million dollars' worth of poultry products is "Biddy's" yearly contribution to the farmers' pocket-book, and if the exact truth were known, a goodly number of those three hundred millions were made by men and women who have studied how to feed the hen.

Such men use good, sound, chicken sense. They begin with young chicks, and follow a consistent system of feeding all through the life of the hen; using with the regular ration, that wonderful discovery of Dr. Hess—Poultry Pan-a-ce-a—which builds healthy flesh, bone, and feathers, and makes early laying a habit. Now let me say right here that Dr. Hess' Poultry Pan-a-ce-a is not a stimulant. Rather, it is a health-giving tonic, which helps the hen to get out of her food all that Nature would otherwise supply.

Poultry Pan-a-ce-a helps the hen to digest her food properly, which in itself gives her health and vigor. It aids assimilation—every grain or particle of food goes where it is most needed, to build bone, flesh, feathers, or to make eggs, so that the greatest possible good is realized in the least possible time.

The saying that "an ounce of prevention is worth a pound of cure" is doubly true in the poultry business. The wise hen man cures his hens before they get sick, and his one certain agent for doing it is Dr. Hess' Poultry Pan-a-ce-a.

Poultry Pan-a-ce-a and Instant Louse Killer are the result of long study and experiment under just such conditions as the farmer meets with in his own yards.

Dr. Hess & Clark, of Ashland, Ohio, are so confident of the good you will get from these preparations that they are willing to give a written guarantee with every package. The cost is so small it's hardly worth considering.

Every Tuesday, balance of the year, the Chicago Great Western Railway will sell homeseekers' tickets to Minnesota, North Dakota, and Canadian Northwest at about half rate; to other territory first and third Tuesdays. Write G. W. Lincoln, G. P. A., 7 West 9th St., Kansas City, Mo. State number in party and when going.

MRS. IDA STANDIFERD, "Up-To-Date" Farm.

CHICK FEED

The cleanest, purest feed for baby chicks on the market. Every day egg producer on alfalfa mash. Starts the hens to laying and keeps them laying. Wholesale poultry supplies. Send for circular.

The Otto Weiss Alfalfa Stock Food Co. Wichita, Kansas

Eggs for Hatching

Send for my special Barred Rock circular; also ten other varieties of choice standard leaders. All free. Write me your wants.

A. H. DUFF, Larned, Kansas

White Plymouth Rocks EXCLUSIVELY.

Good for Eggs, Good to Eat and Good to look at.

W. P. Rocks hold the record for egg-laying over every other variety of fowl; eight pullets averaging 289 eggs each in one year. I have bred them exclusively for twelve years and to them scoring 94 to 96%, and as good as can be found anywhere. Eggs only \$2 per 15; \$5 per 45, and I prepare expressage to any express office in the United States. Yards at residence, adjoining Washburn College. Address THOMAS OWEN, Sta. B, Topeka, Kans.

BUFF LANGSHANS

13 eggs, White \$2, Black \$2, \$1 and \$1 per 100; Buff Leghorns, Orpingtons, Cochins, S. & D. C. B. and White Leghorns, B. and W. Rocks, W. and S. L. Wyandottes, L. Brahmas, \$1.50 to \$2.00 per 15. Toulouse Geese eggs 20c each. M. B. turkeys, \$1.50 and \$2 per 9 native high-scoring blood

eggs per 100. Imported and in our yards. Mention Kansas Farmer when writing. America's Central Poultry Plant. J. A. Lovette Mullinville, Kans.

STEINMESCH'S CHICKENS

Winners at St. Louis and Portland. Farm raised. 15 varieties. Catalog FREE. Contains "Some Good Suggestions". Write Steinmesch & Co., 812 Market St., St. Louis, Mo.

The Veterinarian

We cordially invite our readers to consult us when they desire information in regard to sick or lame animals, and thus assist us in making this Department one of the most interesting features of THE KANSAS FARMER. Kindly give the age, color, and sex of the animals, stating symptoms accurately, and how long standing, and what treatment, if any, has been resorted to. All replies through this column are free. In order to receive a prompt reply all letters for this Department should be signed with full name and should be addressed to the Veterinary Department of THE KANSAS FARMER, Topeka, Kans., or to Dr. C. L. Barnes, Veterinary Department, Kansas State Agricultural College, Manhattan, Kans.

If in addition to having the letter answered in THE KANSAS FARMER, an immediate answer is desired by mail, kindly enclose a 2-cent stamp. Write across top of letter: "To be answered in KANSAS FARMER."

Horse with Sore Tongue.—I have a horse with a sore tongue; she began to fall last September, lost her appetite and flesh; she looks pretty well out of her eyes. Her tongue swelled three times the natural size, was red and "furry," with 6 sores around top edge of tongue—one at the end of tongue the size of a quarter, and one at the base the size of a dollar. I can find no one who can give me a remedy. The tongue at present is down to natural size, but she is not doing well. Can you tell what the trouble is, and a cure? J. C. H.

Humboldt, Kans.

Answer.—From the symptoms you give of your horse with a sore tongue would think that the condition came from an irritant of some kind that the animal had eaten, or some foreign substance that had become lodged in the tongue; from the fact that your animal is not doing well at present would advise your getting the following condition powder filled and give in the feed, ground feed being preferable: One ounce of nux vomica, 2 ounces pulverized gentian, 2 ounces pulverized fenugreek, 8 ounces pulverized glycyrrhiza root, 1 ounce pulverized potassium iodide; mix and place in 10 pounds of oil meal; give a heaping teaspoonful night and morning in ground feed.

Horse with Watery Eyes.—I have a horse that has had a running at the eyes for the past two months; they look all right but water all the time. Can you tell me what is the trouble and a remedy? W. F.

Eimdale, Kans.

Answer.—There is probably some inflammation in your horse's eyes; would advise your poulticing the eyes with hot water, as hot as the animal can stand; apply the water to the eye by soaking a large piece of cotton, having the cotton attached to a piece of cheese cloth and tied to the halter; change the poultice as often as it gets cool.

Sore on Gelding—Calves with Ringworm.—I have a light bay gelding, 3 years old, that has a sore 2 inches above the ankle on right hind leg; it is about the size of the end of my finger and extends out so that when I run the curry comb over it it bleeds. Will you please tell me what the sore is, and a remedy?

I also have some calves with spots around their eyes and necks with the hair rubbed off. What is the cause, and what can I do for it? H. A. U.

Rozel, Kans.

Answer.—It is not uncommon for a sore to come on the legs of horses such as you describe, especially if any filth has been allowed to accumulate. Apply the following powder to the sore after it has been washed with clean water to which have been added a few drops of carbolic acid: Iodiform 1 ounce, tannic acid 2 ounces, acetanilid $\frac{1}{2}$ ounce, boracic acid $\frac{1}{2}$ ounce. Mix and place in a dusting box. keep wound covered with this powder. Do not tear the scabs off as they form, but allow them to peel off of their own accord.

The calves evidently have ringworm and I would advise your using a disinfectant, any that will not run into the eye will be desirable. Bathe the areas with a weak solution of one of the common disinfectants, and then apply a preparation of lard and sulfur. A few applications will remedy the trouble.

Weakness in Mare.—I have a large mare 11 years old; she has been bred to a jack every year for seven years. One year she did not have a colt; last year she had a colt which stood and suckled, but when a day old died. This spring she had a colt that was small but lively; he suckled and seemed to be in perfect health. The next morning I found him dead in corner of box stall: no external injuries. I shall not breed her this year. How do you account for it? C. D. A.

Hickmans Mills, Mo.

Answer.—There is evidently some weakness which would be considered constitutional in the case of your mare. Would therefore advise your giving the

animal a course of treatment to build up her condition before raising any more colts. Use one of the condition powders that you have seen recommended in these columns.

Cocked Ankles.—Can a horse that has cocked ankles be cured if taken in time. He only shows signs after a hard drive. J. E. S.

Lakin, Kans.

Answer.—If a horse is properly cared for after a long drive the cocked ankles can be prevented by rubbing and poulticing with antiphlogistine and then bandaging so as to hold the ankles in position.

Mare Out of Condition.—I have a 12-year-old sorrel mare that had distemper for several weeks, and then a bunch came on the small of the back and hips, and in a few days her limbs and breast were swollen so she could hardly move. She has been in this condition for ten days. She has a good deal of fever in her limbs. What can I do for her? M. T.

Traver, Kans.

Answer.—I would advise using a teaspoonful of nitrate of potash in the mare's drinking water night and morning. Apply hot water to the limbs, rubbing them thoroughly for several minutes after using the water, then apply a liniment that will not blister.

Indigestion.—I have a 5-year-old bay mare that breathes as if in pain; she will breathe naturally for a minute or two then inhales and exhales with a grunt. She has been in this condition for a month. I work her all the time on the farm. V. M.

Answer.—The condition you mention with your mare is often brought about by digestive trouble coming on from feeding alfalfa or dusty hay. The remedy is to take away the feed that is causing the trouble and feed very little roughness and considerable grain for a month or more.

Lump on Mare's Jaw—Horses Have Worms, Etc.—I have been using the liniment you prescribed for the lump on my mare's jaw; the lump gets no larger or smaller. The sore is growing larger and discharges a white matter; what would be best to use to clean the sore out?

I also have some young horses that seem to be hide-bound and wormy; they rub a good deal; have had grain all winter but are not doing well.

McPherson. A. R. J.

Answer.—I would advise opening the lump on the mare's cheek, and then heal the wound by the use of some of the common disinfectants which are found on the market. If you have nothing else a half teaspoonful of carbolic acid in a quart of water makes a good disinfectant.

I would advise using oil-meal for the animals that are hide-bound; give them plenty of salt and I think this will rid them of the worms. If it fails to do so, give 1 ounce of turpentine to a dose, six hours apart until you have given 4 doses, while the animals are fasting. It would be best to give the turpentine in half a pint of raw linseed oil.

C. L. BARNES.

Hebrew's Hog Sale.

(Continued from page 463.)

China hogs and has recently added to his herd some of the best blood in the country. If you will notice the accounts of the most prominent sales which have been held during the past year, you will find that Mr. Hebrew's name is among the buyers of the high-priced stuff. Col. John Brennen cried the sale, and the following is a list of the buyers:

T. M. Cooper, Stockton; G. N. Johnston, Stockton; L. L. Marshall, Stockton; J. M. Mellon, Stockton; Jack Dryden, Stockton; Thos. Shaw, Stockton; J. G. Woodrum, Stockton; W. T. Low, Jewell City; C. N. McNulty, Stockton; Jack Shaw, Stockton; W. E. Daniels, Stockton; V. Hollenworth, Stockton; E. G. Davis, Stockton; Richard Marjewell City; C. N. McNulty, Stockton; Ed. Hays, Stockton; O. B. Smith, Cuba; F. Schruber, Stockton; Ed. Hederhorst, Stockton; T. M. Cooper, Stockton; D. W. Cook, Stockton; A. J. Iman, Stockton; A. H. Sanders, Stockton; O. Hazen, Stockton.

Gossip About Stock.

G. H. Ramaker, of Prairie View, Kans., has a fine herd of Duroc-Jersey hogs. His herd was started about four years ago, and he has taken great pains to get good foundation stock. Among his brood sows we found Perfection Girl 98904 by Red Perfection, dam Iowa Girl; Gold Mine 77498 by Missouri Boy; Prairie View 77504 by Missouri Boy; and others equally as good. His herd boar is Journal 2d by Duroc Jim 22829, dam Chandler's Journal 31998. Mr. Ramaker will be an advertiser in this paper later in the season. Watch for it as he will have some bargains.

Volume 64 of the American Short-horn Herd Book is off the press and ready for distribution. It contains the pedigrees of bulls numbered from 242180 to 247190, both inclusive, and the pedigrees of 6857 females. The price of this volume to non-members is \$3.30, postage prepaid. Volume 65 is now in press and entries for Volume 66 have been closed. All names sent in

hereafter will appear in Volume 47 or a later one. Address Secretary John W. Groves, Live Stock Record Building, Chicago, Ill.

Hon. T. A. Hubbard, who is known throughout Kansas as the owner of Rome Park Stock Farm, and who has long been a very active member of the Kansas State Board of Agriculture, still keeps close to the alfalfa roots by raising some of the best hogs in Southern Kansas. Just now he has a nice bunch of Poland-China boars and bred sows for sale. Twenty-five of the boars are ready for service now, though he can furnish pigs if desired. With the blood of Lamplighter Jr. 35311, Medler 39541, Simply O. K. Jr. and Perfection 38771 in his herd he is able to supply the best. He also has some fine Berkshires from Rutger Judge 2d 2'680, Hubbard's Jumbo 85973, Baron 86921 and Royal Dick 88116, who have each found a home at the head of this herd. Mention THE KANSAS FARMER and write for these hogs.

Farming Lands in New Zealand.

The New Zealand Government, knowing they have one of the best agricultural countries in the world and desiring to increase their population by having settle among them, English speaking farmers from America, have entered upon an extensive advertising campaign in this country to show American agriculturists the opportunities they have for bettering their condition in New Zealand.

The country is marvelous in every way, a moderate climate, no extremes of heat or cold. Enormous crops are raised of all such products as are grown in temperate climates. Potatoes, turnips, and mangels are measured by the ton rather than the bushel. Wheat, oats, barley and fruit are produced in immense quantities. It is one of the greatest sheep-raising countries in the world. The dairy exports amount to millions of dollars annually.

Farmers are prosperous everywhere. The New Zealand Government aids and assists them in every way and loans money to settlers at 5 per cent per annum.

The country has less than a million population. There are 276,000 people, or almost one-third the population who have money in the savings banks amounting to \$43,331,000. The country has never had a drought or failure of crops.

The Government has millions of acres of land for sale to farmers. It issues very handsome literature with illustrations of farm lands, stock, etc., and gives a full and accurate account of the country as it is, what lands are worth, etc. This literature is sent free by the Government to any address upon request, and if any of our readers are interested in knowing more of this magnificent country, we suggest they write at once for literature and information to Mr. T. E. Donne, Superintendent Government Department, Wellington, New Zealand. See advertisement on page 476.

Earthquake in Wisconsin.

Kendalls, Wis., April 11.—By special dispatch—The following telegram tells how three separator manufacturers met an earthquake that jarred the ground under their feet.

Kendalls, Wis., April 11.

The Sharples Separator Co., Chicago.

"In the presence of forty dairymen, Tubular won big contest here yesterday, over three competitors. Sold committee six sixes."

Mr. Maire is the traveling representative of the Sharples Separator Co., of West Chester, Pa., Chicago, Ill., and Toronto, Canada, manufacturers of the famous Sharples Tubular Cream-Separator. The Sharples Separator Co. certainly seems to have things about its own way, easily winning all public contests in which it enters its machines. This contest certainly proved an earthquake to the three defeated competitors, as Mr. Maire's telegram says they were not only defeated but that six of the popular number six Tubular Cream-Separators were sold on the spot as a result of this contest.

CHEAPER FARM LAND

SOUTHWEST OFFERS BEST OPPORTUNITIES FOR SECURING HOMES

Many farmers in the Northern and Eastern States are selling their high priced lands and locating in the Southwest. Many who have been unable to own their homes in the older country are buying land in the new country.

Unusual opportunities exist along the lines of the Missouri Pacific-Iron Mountain Route. The rich, alluvial, delta lands and river bottom lands of Southeast Missouri, Eastern Arkansas, Louisiana, and Texas, capable of producing 60 bushels of corn, abale of cotton, 4 to 6 tons of alfalfa, 150 bushels of potatoes, and other grains, vegetables, and hay crops, can be bought for \$7.50@15 per acre. When cleared and slightly improved will rent for \$4@6 per acre cash.

Uplands more rolling, lighter soil, adapted to fruit-growing—peaches, pears, plums, grapes, berries—also melons, tomatoes, and other vegetables, can be bought for \$5@10 per acre in unimproved state. Many places with small clearings and some improvements can be bought very cheap.

This is a fine stock country. No long winter feeding. Free range, pure water, mild climate. A healthy, growing country, with a great future.

Write for map and descriptive literature on Missouri, Arkansas, Louisiana, Texas, Kansas, or Indian Territory. Very cheap rates on first and third Tuesdays of each month.

Address.

GENERAL CONDITIONS.

The past week has experienced extremes in temperature and precipitation yet the weather has been springlike. The week began with low temperatures over the State, the minimum temperature being 28° in the northern

15th but was seasonable on the other days, reaching a maximum of 82° on the 21st.

LaBette.—The weather was a little cool the first of the week, the temperature falling to 35° on the morning of the 15th, but after that date the maximum temperatures ranged in the seventies each day. There was a light shower on the 20th.

Linn.—The first of the week was cool with a minimum temperature of 32° the morning of the 15th, but it gradually got warmer and a maximum of 84° was registered on Saturday. All the days excepting one were clear.

Lyon.—The nights were a little cool the first of the week but the days were warm and pleasant with maximum temperatures generally in the seventies. Saturday was the warmest day. There was no rain and most of the time it was clear.

Marshall.—Every day was clear and there was no rain. Maximum temperatures ranged in the seventies on all but the first day of the week, and minimum temperatures ranged in the forties on all days except the 15th, when a minimum of 28° was recorded.

Montgomery.—It was cool the first of the week but there were summer temperatures the last of the week. The 19th and 20th were cloudy with a trace of rain on the 20th. Timber belts and orchards are getting green, hedges are leafing, and lilacs are in bloom.

Osage.—There were light showers the first two days of the week with a minimum temperature of 33° Sunday morning, but after that the weather was fair with maximum temperatures in the seventies.

Riley.—It was cold enough on the morning of the 15th to form thin ice but it seems to have done no damage. The days have been warm and pleasant with the nights a trifle cool. Northeasterly winds have generally prevailed.

Shawnee.—This has been a very pleasant week. The first two days were a little below normal in temperature with a light frost the morning of the 15th. The temperature and sunshine for the week were above normal. A light rain fell on the 19th. There were no high winds during the week.

Wilson.—The first four days of the week were warm and pleasant. On Friday there was a very beneficial thunderstorm and .70 of an inch of rain fell. It was a little cool the morning of the 15th but the days were warm.

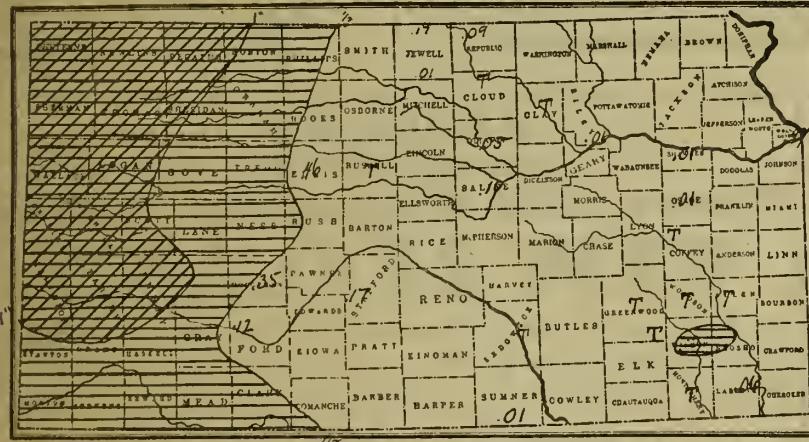

Woodson.—The week has been fair and pleasant with only three partly cloudy days and no cloudy day. The minimum temperature was 33° on the 15th and the maximum was 88° on the 21st.

Wyandotte.—Excepting the first two days which were cool, the temperature was warm and seasonable. A thunderstorm with a fairly good rain occurred on the evening of the 19th and was followed by warm, sunshiny weather the balance of the week.

MIDDLE DIVISION.

Barton.—The week was partly cloudy. There was one cloudy day but no rain. The high-

RAINFALL FOR WEEK ENDING APRIL 21, 1906.

counties east of Phillips County, and 29° in Clay, Riley, and Saline Counties with a light frost extending to the southern line of the State. The temperature rose rapidly for two days, then remained nearly stationary until Saturday when a warm wave crossed the State, giving a maximum of 85°, and a weekly range of temperature for the State of 60°. The precipitation occurred generally on the 19th. In the extreme western counties it began on the 18th and ended on the 19th. Several counties in the middle and eastern divisions report no precipitation, several report a trace. In the Kaw Valley it was light. Fair showers occurred in the western counties of the middle division, with heavy rains generally over the western division—the reports showing the ground to be thoroughly soaked in the western portion of the western division.

CONDITIONS IN DETAIL.

EASTERN DIVISION.

Allen.—The week was warm and pleasant with light winds averaging from 3.8 to 6.6 miles per hour. No precipitation except a trace of rain on the 21st. There was a light fog in the early morning of the 21st.

Anderson.—A warm week with much sunshine. Good growing weather.

Bourbon. Thursday and Friday were cloudy but the rest of the week was clear with reasonable temperatures. The highest temperature was 86° on the 21st. There was no precipitation.

Chase.—The weather has been fair, the only precipitation was .02 of an inch on the 19th. Thursday was cloudy but there was plenty of sunshine the other days. Trees and grass look green again.

Chautauqua.—Very pleasant weather with very few clouds on any day except Tuesday. There was no rain during the week.

Coffey.—Very pleasant week with uniform day temperatures. The lowest temperature was 24° on the 15th and the highest was 87° on the 21st. There was no rainfall.

Crawford.—Fine growing weather since Monday. Only a few scattered showers. Thursday and Friday were cloudy but the rest of the week was clear.

Elk.—There was a light frost on the 15th but it did no damage. Good weather has prevailed all week with very light showers on the 17th and 20th.

Greenwood.—A warm, pleasant, sunny week. There was no rain except a light shower on the 17th. The highest temperature was 85° on the 21st and the lowest was 24° on the 15th.

Jefferson.—A light frost was observed on the morning of the 15th. It was a good week for outdoor work. There was no rain and there was plenty of sunshine.

Johnson.—The weather has been fine. It was partly cloudy Thursday but the other days were clear. The temperature fell to 31° on the

lowest 34° on the 15th. The 17th was windy.

Butler.—This has been a pleasant week with reasonable temperatures. The coolest weather was the first of the week with a minimum of 35° on the 15th, but it gradually warmed up and a maximum of 84° was recorded on the 21st.

Clay.—There was a light frost on the morning of the 15th with a minimum temperature of 29°, but the balance of the week was warm and pleasant. The only precipitation was a light shower on the 17th.

Cloud.—The first two days of the week were cool but the remainder of the week was from 2° to 9° above the seasonal average. The sunshine was 49 per cent of the possible amount.

Harvey.—There was a trace of rain on the 19th.

Cowley.—This has been a dry week with two days cloudy and one partly cloudy. The temperatures were very uniform, the maximums ranging in the seventies on all but the last day and the minimums generally being in the forties and fifties.

Ellis.—The first of the week was cloudy and a little cool. On the 19th, .26 of an inch of rain fell. The last two days were clear and warm.

Elliott.—The minimum on the morning of the 15th was 32° but there was a gradual warming up after that and summer temperatures prevailed the last two days. The highest temperature recorded was 87° on the 20th. There was no rain.

Jewell.—Seasonable temperatures prevailed with light showers on the 15th, 16th, and 19th. The lowest temperature was 28° on the 15th, after that the maximums generally ranged in the seventies.

McPherson.—There were no rains. The weather was cloudy except the last three days. There were no frosts.

Ottawa.—The weather has generally been clear and reasonable with light showers on the 15th and 16th.

Pratt.—The weather has been very uniform and pleasant, but it was windy on the 15th and 17th. The lowest temperature was 38° on the 15th, and the highest was 80° on the 21st.

Reno.—The week was rainless. The middle part was partly cloudy to cloudy but the fore part and latter part were clear. Maximum temperatures generally ranged in the seventies.

Republic.—There were light showers on the 16th and 18th, and the 19th was cloudy but the rest of the week was clear and the weather was reasonable.

Russell.—There was a trace of rain on Friday. It was a little cool the morning of the 15th with a minimum of 34° but summer temperatures prevailed the last of the week. The maximum temperature was 82° on the 21st.

Sedgewick.—The weather was clear on the morning of the 15th with a temperature of 29°. Seasonable temperatures prevailed the balance of the week. There was a trace of

rain on the 15th and a light shower on the 20th but none on the other days.

Sedgewick.—Light frost was observed on the morning of the 15th. The temperature was below normal the first three days and above the last four. With the exception of a trace of rain on the 15th the week was without precipitation. The weather was clear on the 15th, becoming partly cloudy on the 16th and clear again on the 20th.

St. Francis.—Seasonable temperatures prevailed after the 15th, which was a little cool. .17 of an inch of rain fell on the 20th but none on the other days.

Sumner.—A light frost occurred on the 15th but the week was warm and pleasant with only .01 of an inch of rain. The highest temperature was 80° on the 21st and the lowest, 35° on the 15th.

WESTERN DIVISION.

Clark.—The weather has been unusually favorable with rain on only one day, and seasonable temperatures.

Decatur.—There was a trace of rain on the 15th and a heavy rain of 1.03 inches on the 19th. The rest of the week was clear. Temperatures were generally seasonable except that it was a little cool on the 15th and 19th.

Finney.—The weather was generally warm with a rainfall of 1.40 inches on Thursday. The ground is now thoroughly soaked.

Ford.—The 16th, 17th, and 19th were below the normal temperature, and the other days were above the normal. There were light showers on the 15th, 16th, 18th, 19th, and 20th. The sunshine for the week was 68 per cent of the possible amount.

Gove.—It was a fine week with a moderately heavy shower on the 19th. The highest temperature was 78° on the 18th and the lowest was 41° on the 20th.

Grant.—There was rain on the 19th and 20th. The only clear day was the 18th.

Gray.—Showers fell on the 16th, 19, and 20th. All the days up to the 21st were cloudy or partly cloudy. The maximum temperature was 80° on the 21st, and the minimum was 30° on the 15th.

Hamilton.—Showers fell on the 17th, 18th, and 19th. The 17th, 18, 20th, and 21st were warm but the other days were a little cool.

Hodgeman.—There was .35 of an inch of rain fell on the 19th but none on the other days. Maximum temperatures ranged in the sixties or seventies and minimum temperatures generally in the forties.

Kearny.—A heavy rain fell on the 19th and a moderate shower on the 20th. The temperature fell to the forties at nights and rose to about seventy each day.

Lane.—The 16th and 17th were partly cloudy with considerable wind. On the 19th a fine rain fell. The 20th was clear and warm.

Scott.—An inch of rain fell on the 19th and a trace on the 20th. The highest temperature was 80° on the 21st and the lowest was 37° on the morning of the 20th. On the other mornings the minimum recorded was in the forties.

Thomas.—On Wednesday and Thursday a total of an inch and a half of rain fell. Friday and Saturday were beautiful spring days.

Trego.—A good shower fell on the 19th which was a rather cool, cloudy day. Maximum temperatures generally ranged in the seventies the rest of the week. The minimum did not fall below 40° after the 15th.

Grain in Kansas City.

Receipts of wheat in Kansas City today were 73 cars; Saturday's inspections were 34 cars. Offerings were large. A few early sales of milling wheat were at unchanged prices. The general demand was poor, and average prices were 1/2@1c lower. The sales were: No. 2 hard, 1 car fancy yellow \$3c, 2 cars 81 1/2c, 1 car turkey yellow 81c, 4 cars 81c, 5 cars yellow 81c, 3 cars 80 1/2c, 7 cars 80c, 3 cars 79 1/2c, No. 3 hard, 1 car turkey 81c, 1 car 78 1/2c, 1 car 78c, 7 cars 77c, 5 cars 76c, 6 cars 75c; No. 4 hard, 1 car 75c, 4 cars 72c, 3 cars 71c, 2 cars 70c, 1 car 68c, 1 car 67c, 1 car 66c, 1 car 65c; rejected hard, 1 car 65c, 5 cars 62c; No. 2 red, 1 car 91c; No. 3 red, 1 car 87c; No. 4 red, 1 car 86c; No. 2 mixed, 2 cars 88c; No. 4 mixed, 2 cars 65c.

Receipts of corn were 60 cars; Saturday's inspections were 37 cars. There was an increased supply, but the demand was good.

Prices were unchanged to 1/2c lower, as follows: No. 2 white, 1 car 48 1/2c, 3 cars 48c; No

FARMERS!

There's Land Waiting For YOU In NEW ZEALAND

The Paradise of the Pacific; Sixteen Days Steam from San Francisco

THERE IS ROOM FOR THOUSANDS OF SETTLERS

Rich Soil. Abundance of Water. No Droughts. No Snow-bound Winters. Mild and Equable Climate. A Land of Peace and Plenty. New Zealand's WEALTH Per Head of Population Is the Highest in the World.

ITS DEATH RATE IS THE LOWEST IN THE WORLD.

Government land is obtainable on easy terms, perpetual leasehold or freehold. Government assistance to new settlers. State loans to farmers at low rate of interest.

New Zealand is a magnificent dairyland meat-raising, lumber and wool-growing country. Last year the produce of the farms of New Zealand totaled a value of one hundred million dollars. New Zealand's butter, wool and frozen mutton fetch the highest prices in the world's markets.

New Zealand Railways are owned by the Government. Cheap freight and passenger rates. Government and Municipal ownership of public utilities. Government Trust Offices, Insurance, Savings Banks, etc.; Government Sanatoria and Hot Mineral Water Spas.

New Zealand is a region of grand and novel scenery. It is largely visited by American tourists who escape the rigors of winter.

A land of splendid sport. Trout-fishing and Deer-stalking. Thousands of miles of angling waters carrying the biggest trout in the world.

It is SUMMER in New Zealand when WINTER in America. New Zealand's summer is cool and enjoyable for traveling. Comfortable hotels. Good Transportation. Cheap rates.

YOU WILL FIND OUT ALL ABOUT NEW ZEALAND

by dropping a postcard to T. E. DONNE, Superintendent, Govt. of Tourist and H. M. Mail Steamers from San Fran to New Zealand Every Three Weeks.

JUST ISSUED

Farm Grasses of the United States

By W. J. SPILLMAN

Agrostologist, U. S. Department of Agriculture

An intensely practical discussion of the farm grasses of the United States of America is presented in this volume. It is essentially a resume of the experience of American farmers with grasses, and it is safe to say that no other work has covered the ground so thoroughly. No attempt has been made to give a connected account of all the grasses known in this country, but the aim has been rather to give just the information which a farmer wants about all those grasses that have an actual standing on American farms. The whole subject is considered entirely from the standpoint of the farmer. One of the most valuable features of the book is the maps showing, at a glance, the distribution of every important grass in the United States; and the reasons for the peculiarities in this distribution are fully brought out. The principal chapters treat on the grass crop as a whole and the relation of grass culture to agricultural prosperity, meadows and pastures, the seed and its impurities; the bluegrasses; millets; southern grasses; redtop and orchard grass; bromegrass; grasses for special conditions; haying machinery and implements; insects and fungi injurious to grasses, etc., etc. The methods followed on some pre-eminently successful farms are described in detail, and their application to grass lands throughout the country is discussed. The discussion of each grass is proportional to its importance on American farms.

This book represents the judgment of a farmer of long experience and wide observations regarding the plan in agriculture of every grass of any importance in American farming. In its preparation its use as a text book in schools as well as a manual of reference for the actual farmer has constantly been kept in mind. The book is most conveniently arranged and splendidly indexed, so that the reader may find any subject at a glance.

Illustrated, 5x7 inches, 248 pages. Cloth, Price, postpaid, \$1.00.

GEO. ALLEN'S STRAIGHT CRUICKSHANK SHORTHORN SALE

At Sale Pavilion, South Omaha, Nebraska, Tuesday, May 1, 1906

I will consign at public auction four head of pure Cruickshank and Scotch Shorthorns of my own breeding, of which twenty-seven are cows and heifers from one to four years old, and fourteen bulls from twelve months to three years old, representing such choice Cruickshank families as Victorias, Lavenders, Seereis, Barmponts, Butterflies Acanthus, Village Princesses, Matchlesses of Mall Valley, Misses and Nonpareils and one pure GRAND DUCHESS cow without an antler. Note the breeding of a few of those in the sale:

No. 8. BARMPTON DUKE 2d. Bull.

Red Roan, bred by George Allen, Lexington, Neb., calved Nov. 30, 1904.

Got by Godwin 115676.....W. A. Harris

In selecting the foundation of my herd I was careful to get the best Cruickshank breeding and individuals to be found, and they cost me from \$500 to \$1000 each. This consignment is made up of choice young animals, many of which I would have preferred to keep, but it being my first sale in the West, I desired to make it an attractive one. All cows and heifers old enough for service will be safe in calf, or have calf at side by the Scotch bulls whose pedigrees will appear in the catalog, which will be sent on application. Breeding lists furnished at time of sale. This will be a good time to get choice show cattle and herd-headers.

WALNUT GROVE FARM ...FOR SALE...

Upon the advice of several specialists I am going to New Mexico for my health. On this account I must dispose of all my Kansas property, including the famous Walnut Grove farm, the most complete and profitable stock farm in Kansas. This includes 130 acres of the best land in Kansas, two miles from Emporia. Over 200 good O. I. C. hogs. All our Barred Plymouth Rocks, 36 Collies, 44 head of cows, 8 head of horses, the best farm house in the State. Also one small farm house, 2 large barns, 2 large cattle-sheds, one 300-foot hen house, one 250-foot broiler house, 20 brooder houses, capacity of plant, 4000. The best hog house in the West, double-deck cement floors; many small hog houses. This is not an experiment, but a successful stock farm. Price, \$20,000 cash.

H. D. NUTTING, Emporia, Kans.

THE AMERICAN QUEEN NEW YORK A SPLENDID HOUSEHOLD MAGAZINE

THE AMERICAN QUEEN is a splendid household monthly magazine, size of The Ladies' Home Journal, twenty to twenty-four pages each issue, beautifully illustrated and printed on good paper, not a new magazine, but an established publication in its tenth successful year, giving invaluable Fashion articles and ideas, Dressmaking hints and practical helpful suggestions, Floriculture, Money-making Ideas, Beauty and Medical Hints and questions on these subjects answered by celebrated specialists. Physical Culture, Animals, Building Plans and Ideas, Beautifying Homes, Splendid Stories, Brilliant Humor, Entertainments for Church, Home and Societies, Fancy Work, Cooking, Money-saving Ideas and other interesting features. Up to date, reliable and helpful.

BOUNDARY LINES OF FARMS.

EDITOR KANSAS FARMER:—Several interested parties would be pleased to get information about boundary lines of farms. Twenty-six years ago A and B each purchased adjoining quarter sections of land and set their hedge rows on the line between them, according to the corner stones of the Government survey, and have regarded this hedge row as the dividing line between them for the past twenty-seven years. The Government corner stones have since been lost.

Two neighbors who own land on the opposite side of the road from A and B disagree in regard to the location of the boundary line between their farms and call on the county surveyor to survey the land. The county surveyor sends out notices to sixteen farmers, residents of four sections of land where the lines are in dispute, and tells them that their lines and corners will be affected by this survey. Only two men, of the sixteen property-owners, desire this survey; the others are all satisfied with the lines and corners as they are.

Can A and B's line be changed by this survey? Must all these farmers help pay for a survey they do not want and is only called for by these two men who are unable to agree?

Marion County. S. A.

It will be well for the parties interested in this matter to read carefully chapter 29 of the General Statutes of Kansas. Section 7 of said chapter provides that any party or parties having a survey to make in which another party or parties are interested, shall notify the county surveyor, who shall notify such interested party or parties and that such notified parties shall pay their proportionate part of the expense of a survey by the county surveyor. If it seem unjust that any owner of land should be thus empowered to order a survey with attendant costs upon the lands of his neighbors, it must be remembered that an official survey is a legal proceeding. As in bringing a law suit a person may place others under needless expense, so in causing a survey to be made a cranky person may create costs that ought not to be created. Section 31 of the chapter mentioned provides that the county surveyor shall apportion the costs among the several parties interested. In the cases that have gone to the Supreme Court these sections of the law have been considered conclusive as to costs.

That the line which was established according to the original Government survey markings and has been recognized for twenty-seven years should continue to be the line, there is no doubt. Any survey which disturbs such line would be promptly set aside if the case were taken into court. On this point Judge Cooley on Boundary Lines, quoted by Chief Justice Horton in 28 K. 665, says: "To bring these lines into discredit when people concerned have not questioned them, not only breeds trouble in the neighborhood, but it must often subject the surveyor himself to annoyance and discredit, since in legal controversy the law, as well as common sense, must declare that a supposed boundary line long acquiesced in, is better evidence of where the real line should be than any survey made after the original monuments have disappeared. . . . It is merely idle to direct a surveyor to locate or establish a corner as the place of the original monument according to some inflexible rule, however erroneous may have been the original survey. The monuments that were set nevertheless govern, even though the effect be to make one-half of a

quarter-section of land ninety acres and the adjoining one seventy acres, for parties buy, or suppose they buy, in reference to these lines, and no more, be it more or less."

Sections 27-30, chapter 29, provide that any interested party may appeal from the finding of the county surveyor to the district court. The appeal must be taken within thirty days. If appeal be taken, it will doubtless be necessary to employ an attorney, so that it is not necessary that the procedure on appeal be described here.

It is proper to call the attention of the county surveyor to the facts and the evidence as to the location of the Government survey, and to urge that this line be left unchanged. Indeed it will do no harm to call the county surveyor's attention to THE KANSAS FARMER's discussion of the subject, for, though he is doubtless conversant with the law and the decisions of the courts, he may like to refresh his memory thereon.

DAMAGES ON ACCOUNT OF ROADS.

EDITOR KANSAS FARMER:—Please inform me through the columns of THE KANSAS FARMER whether a man must give the required amount of land for a public road, on a section line, or whether he can collect pay for it, or in other words can he sell it to the State?

If a road is being opened through his land, compelling him to move fences, or build new ones, can he hold the township for the expense of doing this work? NIC. SUHLER.

Kingman County.

The subject of "Roads and Highways" is treated in chapter 154, General Statutes of Kansas. The owner of land over which a road is proposed is entitled to compensation for the land taken for public use, or rather for the easement by which the public acquires the right to the use of the land for the purposes of a highway. In several counties of Kansas all section lines have been declared public highways by special enactments. The Supreme Court, 53 K. 655, sustained the constitutionality of such acts on the ground that "a proper tribunal is constituted by the provisions of the act, so that the land-owners can claim and receive damages for the land taken for highways."

Section 3 of chapter 154 provides for a hearing as to damages sustained by any person. Our correspondent should ask his township trustee or a justice of the peace to allow him to examine said chapter 154, and he should read carefully sections 3, 4, 5, and 8, and the brief statements of decisions of the Supreme Court thereon. He will observe that it is necessary to present his claim for damages to the road viewers, and to present it at the proper time.

A HARDY BERMUDA GRASS.

The Oklahoma Experiment Station has again rendered valuable service to the farmers of the Territory by discovering and propagating a variety of hardy Bermuda grass. Bermuda grass grown from seed either winterkills, or is so greatly injured by the Oklahoma winters that it is very unsatisfactory. But by close observation at the experiment station, it was learned that in some of the plats sown as long ago as 1892 there was to be found a hardy variety which endured the winters well, started early in the spring, and yielded abundantly for pasture and satisfactorily for hay. This grass yields no seed in Oklahoma, so that it has not been possible to reproduce the hardy variety from seed. It is easily propa-

gated from sod, however, and this method is reported to be reasonable in cost.

The station has distributed trial lots of this hardy grass sod to all parts of Oklahoma and has received favorable reports from every county but one. It has endured a temperature of 18° below zero without injury.

For preventing washes and for filling old washes Bermuda grass excels. It endures overflow, having been submerged for three weeks and kept on growing. "Eighteen inches of tough clay have been tamped down on an established sod of Bermuda grass, and in six weeks, the grass made its way through and formed a sod on top," says a bulletin from the Oklahoma Station. "Strips of Bermuda sod have been placed four feet apart across gullies by the roadside, and within two years, it was necessary to plow out a gutter to furnish a place for the water to run. Ditches in cultivated fields, so deep as to be impassable for farm machinery, have been filled in one season by the dirt caught by Bermuda grass planted in the hard soil in the bottom of the ditch."

As a lawn grass Bermuda grass is about the only thing that is satisfactory south of the Kansas line.

Possibly Bermuda grass may be adapted to the climate of Kansas by the method pursued in finding a variety adapted to Oklahoma. The chance of such a find is well worth a search.

RESPONSIBILITY FOR DAMAGES BY FIRE.

EDITOR KANSAS FARMER:—I would like to inquire whether a man is responsible for damages done by his setting fire on his own farm, and it crosses over to his neighbor's land, and burns up three hundred grapevines, an acre of strawberry plants, some blackberry vines, etc. He owns eighty acres of land. Can he be made to pay the damage? Would it be a State case?

Johnson County. J. L.

Section 416 of Chapter 100, General Statutes of Kansas, reads as follows: "If any person shall set on fire any woods, marshes, or prairies so as thereby to occasion damage to any other person, he shall be liable to the party injured for the full amount of such damage, to be recovered by civil action."

Several cases under this statute have gone to the Supreme Court. In discussing them the court has inclined to a strict construction of the statute. Much importance has been attached to the words "woods, marshes, or prairies." The general tenor of the decisions is to the effect that a person has a right to set on fire any grass or trash on his own farm and that he is responsible for all damages that result from the spread of the fire to other property "through his negligence." If he exercised due diligence but the fire got away on account of causes beyond his control, as from a sudden shifting of the wind, he is not responsible. The court also holds that adjacent property-owners must not neglect to do all that they reasonably can to protect their properties from the fire.

On the other hand if any person without due regard to danger of injuring his neighbor's property or without taking proper care to prevent damage to his neighbors, starts and allows a fire to get beyond his control he is responsible for the damage done.

If any person "wantonly and willfully" starts a fire in any woods, marshes, or prairies in such a way as to occasion damage to any other person, he becomes liable on conviction to a fine of not more than \$500 nor less

than \$50, or to imprisonment in the county jail for not more than six months and not less than ten days or to both such fine and imprisonment.

Our correspondent's statement of his case, it will be seen, is too indefinite as to his neighbor's efforts to control the fire, and as to the question of wantonness and willfulness to enable the writer to determine the degree of his responsibility.

ARE THEY SWINDLERS?

EDITOR KANSAS FARMER:—A firm has written to me and told me that I had been recommended to them as a suitable person for their employ, and wrote me a nice letter representing their business. They also offered me a good salary to be paid weekly and expenses in advance, but in order to get me acquainted with their business, I must work thirty days at the rate of three dollars per day, regardless of results. All they asked was good, honest labor and when the thirty days were up, the salary and the expenses were to begin. They told me that they were a responsible firm and they meant just what they said, and signed their name to the letter. Was that binding them to do as they agreed in their letter? Then after the thirty days were up they presented an article to be signed which was very different in tone from the letter and I found that I had been misled. Did they use the mail for fraudulent purposes in order to deceive and draw me on? Does the firm sending out these letters with no intention of doing as promised, throw itself liable, and in what way?

Is there a soldiers' home in Fort Dodge? Will you give full particulars as to how it is conducted, who can and who can not be inmates, and on what conditions?

F. SHANNON.

Lyon County.

It is safe to assume in every case of employment offered that the compensation will come within the value of the services to be rendered. Persons, or, as they generally call themselves, companies, that offer extraordinary inducements and "sure things" for untrained service generally protect themselves by skillfully worded contracts or by conditions not noticed by the unwary. When they say that some agents are making "big money" or that they will pay such and such salaries, they are not probably lying in a literal sense. There are persons in agency work who are technically called "wind artists" who can sell anything to almost anybody without much regard to the value or utility of the article sold. Such agents bring big returns to their employers and receive big pay which they generally manage to spend before received. It is useless for an honest person to try to match these wind artists. It can not be done honestly. It should be always remembered that business consists in exchanging values and that no one has a right to take from another that for which he does not give an equivalent in commodities or services, or both.

It is poorly worth while for our correspondent to try to place the persons who have deceived and mistreated him in the toils of the law. Probably their literature and correspondence when carefully scrutinized will be found to furnish plenty of loop-holes for escape. The best plan is to keep clear of all extravagant schemes however attractively presented.

If our correspondent feels that he has been swindled and that it would be right for him to assist in guarding others against like treatment, it may be worth while to take all of the correspondence to the postmaster and ask

that it be referred to the proper division of the postal service.

There is a soldiers' home at Dodge City. This is scarcely the place to give full details as to how it is conducted and who may be admitted to it. This information may be had by addressing the Soldiers' Home, Dodge City, Kans.

ARCHED CELLAR.

EDITOR KANSAS FARMER:—I am planning to build a stone arch cellar, and I wish to know how to make it water tight. I intend to dig down about four feet and wall it up and arch it over. I intend to lay it up with lime and cement, and plaster it inside with cement. Will this keep the water out? Some say it will not. If not, how can I build it so as to keep the water out?

I saw a stone arch cellar that had been laid up with lime and cement which had about a foot and a half of water in it. This would not be very pleasant to jump into when dodging a cyclone or something of that kind.

Elk County. GEO. W. SMITH.

A stone cellar may be made proof against water by making the excavation deep enough so that a four-inch cement-concrete floor may be laid extending under the wall, and large enough so that the wall may receive a coat of cement plaster all over the outside.

It is possible to plaster a stone wall inside with cement mortar and make it hold against water pressure of, say, four feet. The wall should be left without pointing. It may even be nec-

essary to pick out some of the mortar in an unpointed wall so as to give the cement plaster abundant opportunity to bind to the wall. The wall should be free from all loose sand and dirt and should be well sprinkled with water just before the cement plaster is applied. The plaster may be made of one part Portland cement and two parts clean, sifted sand. It should be pressed hard with the trowel. The arch should be cemented on the top.

The floor may be made of cement concrete composed of 1 part cement, $\frac{1}{2}$ parts clean sand, and 5 parts coarse gravel or broken stone. This may be top-dressed with a thin coat of cement and sifted sand troweled smooth.

Mr. Smith may well consider the advisability of making the entire wall and the arch of cement concrete. In answer to an inquiry from Dr. B. F. Harriman, of Fort Cobb, Oklahoma, for directions for making a six-inch wall in a cave 12 by 22, 7-foot ceiling, THE KANSAS FARMER of October 5, 1905, made the following suggestions:

In making concrete walls the larger the proportion of cement the stronger the concrete. But it is not necessary to have the strongest possible concrete. By properly gauging the thickness of the wall sufficient strength can be secured at reasonable cost. For the purposes of our correspondent the proportion used in constructing the seawall at Galveston will doubtless give ample strength. In this wall there was used one part cement, three parts sand, seven parts broken granite.

Used in these proportions the fine sand of the sand-hills will answer. The editor does not like the term "crushed stone." It implies that some of the stone may be reduced to powder. There should be no considerable quantity of fine dust in either the sand or the rock. The broken stone may be of many sizes from that of a grain of wheat to that of a walnut. So, too, there may be both fine and coarse sand with advantage. But materials as fine as clay or silt weaken the work.

Mix the cement and sand dry; then mix with the broken stone; then add water. Two active men may mix 100 pounds—about 1 cubic foot—of cement

with the other materials at a "batch" without danger of serious injury from setting before it can be used if the cribbing be first made ready to receive the materials. The inexperienced will do well, however, to begin by using one bucket of cement and proportionate amounts of the other materials until a little experience has been gained.

If no broken stone is used and sand varying from fine sand to gravel is at hand, very good work may be done by using one of cement to five or even six of sand and gravel.

The cribbing for holding the cement in place until it sets is important. It must be strong enough to bear considerable pressure. The diagram shows a cross-section of the cribbing suggested for our correspondent's cave. The interior height of the cave is seven feet. The under side of the roof is made on a seven-foot radius. Should it be desired to make the cave higher the drawing may be considered as representing only the upper part. The side walls should be erected first. We have assumed that in digging the cave care will be taken to make the sides of the excavation true enough to serve as supports for the concrete.

The walls may be made in sections. In this case the first section will be made about twelve feet long. The cribbing will then be moved and the side completed. It will be necessary to have enough 2 by 6 by 12 pieces to support an entire section of the roof. This will require joists enough to make the cribbing for a section on each side so that the method shown for bracing for the cribbing may well be used. The frame

jobs to give their time to necessary legislation. They "take no thought what ye shall eat" except at the pie counter. Let us have a law to protect our stomachs.

THE DEMOCRATIC NOMINATIONS.

The Democrat State Convention met at Topeka last week, and placed in nomination the following ticket:

Governor—Wm. A. Harris, Leavenworth County.

Lieutenant Governor—Hugh P. Farrelly, Neosho County.

Secretary of State—Hugh C. Ahlbom, Smith County.

State Auditor—W. F. Bowman, Atchison County.

State Treasurer—Patrick Gorman, Bourbon County.

Attorney General—David Overmyer, Shawnee County.

State Superintendent of Public Instruction—A. B. Carney, Cloud County.

Associate Justices (for six-year term) —A. M. Jackson, Cowley County; D. M. Dale, Sedgwick County; (for four-year terms) W. S. Glass, Marshall County; Lorenz Hawn, Leavenworth County.

Railroad Commissioners—Harry McMillan, Ottawa County; C. A. Cooper, Rice County; Jas. Humphrey, Geary County.

Insurance Commissioner—J. W. Morphy, Russell County.

State Printer—W. F. Feder, Barton County.

In placing Colonel Harris at the head of the ticket, no less than in placing him on a platform to which little exception can be taken except that in style it is rather gushing, the Democrats have taken a strong position in State politics. In the United States Senate, Mr. Harris made a record of which Kansas is justly proud. His most conspicuous single service was rendered in connection with the settlement of claims of the Government against the Pacific railroads, in which settlement it is conceded that the Kansas Senator saved many millions of dollars for the Government.

The Republican State Convention is in session, at Topeka, this week. At this writing the slate-makers and the slate-breakers are busy, and some parts of the outcome are uncertain. It is generally realized that a strong ticket and strong positions will be necessary to the perpetuity of the one-sidedness of campaigns and majorities which have characterized recent Kansas elections.

BLOCKS OF TWO.

The regular subscription price of THE KANSAS FARMER is one dollar a year. That it is worth the money is attested by the fact that thousands have for many years been paying the price and found it profitable. But the publishers have determined to make it possible to secure the paper at half price. While the subscription price will remain at one dollar a year, every old subscriber is authorized to send his own renewal for one year, and one new subscription for one year, and one dollar to pay for both. In like manner two new subscribers will be entered, both for one year, for one dollar. Address, The Kansas Farmer Company, Topeka, Kans.

Many a man has a blind notion of stewardship about his property, but very few have it about their knowledge. . . . One grows tired of seeing cultivated people with all their culture cursed by selfishness.—Phillips Brooks.

Twenty-five Bushels of WHEAT to the Acre

means a productive capacity in dollars of over

\$16 per Acre

This on land, which has cost the farmer nothing, but the price of tilling it, tells its own story. The

Canadian Government

gives absolutely free to every settler 160 acres of such land.

Lands adjoining can be purchased at from \$6 to \$10 per acre from railroads and other corporations.

Already 175,000 farmers from the United States have made their homes in Canada.

For pamphlet "20th Century Canada," and all information apply to Superintendent of Immigration, Ottawa, Canada; or to the following authorized Canadian Government Agent

J. S. CRAWFORD, 125 W. 9th Street, KANSAS CITY, MO. Mention this paper.

Modern Silage Methods

That is the title of our new 216 page book. It tells everything anybody could possibly want to know about the silage subject. You can't think of a question that it does not fully answer. How to build, from foundation up, all kinds of silos. All about the crops and how to cut and fill. How to feed, with the most complete feeding tables ever published. About 40 illustrations help to make things plain. Used as a text book in many Agricultural Colleges. We have always sold the book for 10 cents, but for a limited time, to any reader who will ask for it, and name this paper, we will send a copy free. Write at once.

SILVER MFG. CO., Salem, Ohio.

Agriculture

Do Not Sow Alfalfa on New Land.

I am breaking a pasture this week, will finish in ten days. It is fifteen feet to rock (no water). Could I raise alfalfa on this ground? Had I better wait until fall or could I disk and harrow it and plant now? How many times should I disk the land and how many times harrow it before planting?

Barber County. M. C. CAVANAUGH.

It would not be advisable at all to sow alfalfa on the new breaking this spring, and I would not advise to seed to alfalfa even this fall. You could grow some sod crop this season and by cultivation subdue the sod and get the land into fairly good condition for seeding a year from this spring. Or if you do not grow a crop this season and disk the sod thoroughly, continuing the cultivation at intervals during the summer, doubtless a fairly good seedbed may be prepared for early fall seeding. Probably no amount of disking could put this new breaking in condition for spring seeding of alfalfa. Alfalfa seed sown on such land would not germinate except under the most favorable conditions and with an abundant supply of moisture.

If you have older land which has been farmed for several years and really needs a rotation with grasses or alfalfa I would advise to seed the older land to alfalfa and not to seed down immediately the new land which you are breaking. Alfalfa is a soil-renewing crop and should be used as such as well as for the profit which it may bring in as a crop. The new land is not in need of rotation with alfalfa, while the older farming land doubtless is already becoming exhausted in fertility and would be greatly benefitted by a few years' cropping with alfalfa. Also, old land, unless it is too exhausted in fertility, may be seeded down with alfalfa even more readily than new land, especially new breaking—such land will be too loose and mellow for a year or two to produce the best seed-bed condition for securing a stand of alfalfa. Alfalfa does not start well in a loose, deep, mellow seed-bed, rather the seed-bed for alfalfa should be quite firm and only loosened about as deep as the seed is planted—an inch and a half to two inches. The disregard of these points by farmers in the preparation of seed-beds is one of the main causes for failure to secure successful stands of alfalfa.

A. M. TENEYCK.

Interest in Improvement of Corn Advanced by Corn Contests.

PROF. V. M. SHOESMITH.

The farmer has for centuries shown considerable interest in live stock, and has organized associations of breeders for the purpose of furthering the interests of the respective breeds. He, however, has shown much less interest in the improvement of the farm crops. He has planted the ordinary seed of the neighborhood in which he lives, or perhaps has sent to another State, where the conditions are strongly contrasted to his own, and secured seed which is not at all suited for growing in his locality. He has not made a study of his corn, wheat, or alfalfa as he has of his live stock, and consequently knows very little about the best varieties of these crops to grow, best means of improvement, best methods of culture, etc.

The price of land and labor is increasing and our economic conditions are changing in such a way, that the best methods of farming must be practiced in order to get a fair return on our investments and the farmer is waking up to the fact that the best way to meet these changed conditions in the next few years at least, is by study and improvement of his farm crops and by better methods of culture for the same. He is now asking for the best seeds which are adapted to his conditions and is forming organizations for the improvement of corn and other farm crops. At the Kansas Experiment Station at Manhattan, eighty to ninety varieties of corn are tested each year, and the yield per acre of grain and stover are carefully taken, and notes are taken on the drought resistance, date of maturity, grade of corn, and other qualities which determine the value of the corn. Of the one hundred and twenty-five varieties tested in the past three years, which include about sixty-five varieties secured from other States, eight of the nine which have given the highest average yields are native corns, showing that

each State and each locality must work out its own questions in regard to the improvement of corn. It is necessary that we grow some of the native corns or adopt some of the recognized breeds of the older corn-growing States. Results at the Experiment Station indicate plainly that the former plan is by far the better.

If our native corns are the best for Kansas conditions the best of these should be included in the Corn-Breeders' Association's official list of pure-bred corn—provided they have strong type characteristics—as soon as their merits have been satisfactorily determined. This is what the Kansas Corn-Breeders' Association has planned to do. The objects of the Association, as enumerated in Article I, Section 2, of the constitution, are as follows: (1) "To establish improved types and breeds of corn which shall in the best possible way meet the needs of Kansas corn-growers in various parts of the State; (2) to promote the growing of pure-bred corn for seed purposes throughout the State of Kansas; (3) to furnish a means by which valuable native corn which shows purity of breeding may be recognized as pure-bred corn; (4) to establish a bureau for the inspection of the corn grown by the corn-breeders of the State and furnish certificates of type and breed for the same; (5) to protect farmers who desire to purchase pure-bred seed-corn, by supplying such information as will enable them to distinguish the different breeds of corn, and furnishing them with the names of reliable growers; (6) to aid in procuring the enactment of such laws and in doing such other acts as shall protect the growers of pure-bred seed-corn in their efforts to furnish farmers with seed-corn of the breed desired, and to further in any way possible the corn-growing interests of the State; (7) to establish a score-card or standard of perfection for each recognized breed of corn."

Article V., Section 1, specifies the manner in which a corn may be recognized as a pure-bred corn: "Any corn may be included as a pure-bred corn under the rules of this association by vote of the association in annual session assembled: (1) Provided, such corn has been bred and selected separate and apart from all other breeds, strains, or varieties for five years or more; (2) provided, that the board of directors, through at least one of its members or some competent inspector appointed by the board of directors, has carefully examined such corn in locality where grown as to its quality and uniformity of shape, size, color of ears, in regularity of kernels, in filling of butts and tips, in space between rows at crown and tips of kernels, in shape, size, depth and color of kernel, in percentage of shelled corn, in firmness of ear on cob, and in composition of kernels as indicated by the proportional size of germ, hard, flinty, and starchy portions, and provided also that the committee recommends to the association that such corn be recognized as a pure-bred corn; (3) provided, that the breeder of such corn brings one bushel of selected ears of it to the session of the association at which the association votes on the question of recognizing it as a pure-bred corn, and presents to the association a detailed description of the corn, including such history of the breeding and production of the corn as he may be able."

The association wishes to go slow in this matter and has not yet recognized any corn as pure-bred but has recommended the following native corns as desirable ones for growing in Kansas: Hildreth, yellow dent; Kansas Sunflower; Hammett White Dent; McAuley's White Dent; Mammoth White Dent; and Griffing Calico. The following varieties originated in other States have been recommended for planting, providing they have been adapted to Kansas conditions and have maintained their qualities after having been grown in the State for five successive seasons: Boone County White, Silvermine, Reid's Yellow Dent, Legal Tender, Hogue's Yellow Dent, Leaming, and Pride of the North.

The association holds each year in connection with its annual meeting a corn show, in which valuable prizes are offered for the best samples of corn. Expert judges are secured to place the awards and in this way the best corns are brought out and all the members present are given an object lesson in judging corn.

Another contest which the association has provided for is the largest yield from an acre of land, in which suitable prizes are offered. The contestants are allowed to use any corn and any methods of treatment they de-

sire. They are assisted in making the weights and measurements by a responsible person appointed by the Agricultural Department of the college, and one bushel of the corn is sent to the college as a moisture sample, so that all of the yields may be figured to the same (15 per cent) moisture content. Entries must be in by the 1st of September. In planning for this contest it would be well to observe the following suggestions:

1. Plant on the portion of your farm which has the best natural fertility.
2. Plant where the crop will not be liable to suffer from drought or floods.
3. Plant on alfalfa or clover land or land that has grown either of these crops in recent years.
4. Unless the land has been made extremely fertile by being into alfalfa for many years apply a medium thick coat of well rotted manure, but do not plow under coarse or strawy manure.
5. Prepare a good seed-bed, especially if the surface planter is to be used.
6. Plant several acres in one field, so that the best acre may be secured from many.
7. Choose a variety which is known to be a good producer and is well adapted to your conditions.
8. Test your seed-corn for vitality, germinating kernels from each ear separately so that the ears which show low vitality may be discarded.
9. Choose ears which have kernels of regular shape and size so that they may be planted evenly.

10. Use an edge-drop planter or litterer and test it before going to the field; if it fails to drop the proper number of kernels, more than five times out of a hundred, select your corn more carefully or change the size of the cells in the planter plates to more carefully fit your corn.

11. Cultivate your corn sufficiently often to keep the soil free from weeds and covered at all times with a soil mulch two to three inches deep.

For further information in regard to these contests address secretary of Corn Breeders' Association, Manhattan, Kansas.

Treating Seed-Corn.

Can you inform me how to treat seed-corn before planting to prevent crows and birds from digging it up?

Cherokee County. J. C. SEVERIN.

Corn is sometimes soaked in kerosene and other materials for the purpose of keeping birds, gophers, and other animal pests away from it, but carefully conducted experiments show that this practice is not to be recommended. If the corn is soaked for a sufficient time to keep the pests away the vitality is largely destroyed and it is a better plan to get rid of the pests in some other way or to leave them undisturbed rather than to run the risk of a very thin stand on account of low vitality of the seed.

V. M. SHOESMITH.

Pasture Questions.

I have four acres of English bluegrass, sown a year ago, that is rather thin, and four acres adjoining, sown last September, that is coming up well, but is, I fear, too thin to pasture. Can I do anything to make a thicker pasture of it? Will it do harm to pasture it by June 1? The September sowing is very clean except where the grass is coming up thin.

Also, I have a small lot used as a cow pasture last year, and I wish to make a calf and hog pasture of it. I had planned to sow cane. Is there any other plant—grass or clover—that it will pay to sow with the cane?

Butler County. H. L. MARSH.

It will not be possible to thicken up the stand of grass on the field in question by reseeding this spring. Early in September you may disk the fields and sow 5 or 6 pounds of alfalfa-seed per acre, or if you do not desire to use alfalfa in combination with the grass for pasture on account of the danger of pasturing alfalfa with cattle, you may disk early the following spring and sow clover with a little more grass-seed.

I would prefer Bromus Inermis to English blue-grass for pasture, and by sowing early in the spring, just as soon as you can get on to the ground, you will stand a fair chance of getting the young grass and clover to start. Sow 4 or 5 pounds of clover per acre with 6 or 8 pounds of Bromus Inermis. Bromus Inermis may also be sown in the fall with the alfalfa or without it, provided you do not wish to use the alfalfa, and a little clover could be seeded early in the spring without cultivation, taking care to sow the clover so that it may be covered by the freezing and thawing of the ground and the

action of early spring rains. English blue-grass does not thicken up and you can only get a thicker stand of grass by reseeding.

The fall seeded fields should stand light pasturing by the first of June this season.

There is nothing which may be sown and grown successfully with cane which will add much to the value of the pasture—some prefer to sow a little Kauri-corn with the cane. At this station we have tried sowing cow-peas with cane, but the rank thick growth of the cane usually causes a very dwarf growth of cow-peas. By sowing the cane rather thin the cow-peas have a better chance, but the thinner sowing is not so desirable for pasture. Instead of trying to sow a combination of cane with some other crop it may answer your purpose to grow some other kinds of crops for pasture in the same field along side of the cane. Corn and cow-peas grow better together than cane and cow-peas. Sow about a half a bushel of corn and two to three pecks of cow-peas per acre. Also, cow-peas sown alone at the rate of 4 or 5 pecks per acre make excellent pasture for all kinds of stock. Grasses and clover could be successfully used for pasture in the same field with cane, but it will be necessary to seed the grass and clover the year previous in order to establish a stand and a sufficient growth to produce profitable pasture.

A. M. TENNEYCK.

Farmers' Institute at Hays.

A fine audience gathered in G. A. R. hall at Hays City at 2 p.m., April 23, to hear the speakers sent out by the State Agricultural College. Peter Johnson called the meeting to order and introduced Mr. J. H. Miller, the institute secretary of the Agricultural College who, in a brief statement, made known the purposes, aims, and benefits of the Farmers' Institutes that are being organized throughout the entire State. Mr. Miller had previously appointed a committee of the prominent farmers of the county and had impressed upon them the advantages to be derived by every farmer and merchant in the county from the organization of such an institution. Acting upon his suggestions, this committee had drafted a constitution and by-laws, which Mr. Miller presented to the meeting.

THE CONSTITUTION.

Section 1. The name of this association shall be the Ellis County Farmers' Institute Association.

Section 2. The object of this association is to diffuse knowledge concerning the scientific principles underlying the processes in operation on the farm, and in the household; to improve the farm practice and the household management in the county; to awaken in the young a realization of the inherent charm of rightly managed rural life; and in any other ways to add to the material, moral, and intellectual advancement of the people.

Section 3. The officers of this association shall be a president, four vice-presidents, secretary and treasurer, the duties of whom shall be those usually devolving upon such officers, and they shall be the executive committee of the association.

Section 4. Any person above the age of 16 interested in rural pursuits may be elected to membership.

Section 5. This constitution may be amended by a majority vote of the members present at any regular meeting, notice of the proposed amendment having been given at a previous regular meeting.

Upon vote of the meeting, the constitution was adopted. Mr. Miller then read the by-laws prepared, which are as follows:

BY-LAWS.

Section 1. This association shall meet annually in Hays, at a time to be arranged by the officers, unless fixed by the association; or upon call of the executive committee.

Section 2. The expenses of this association shall be met by voluntary contributions, except as otherwise provided by law.

Section 3. The annual dues of members of this association shall be 25 cents for each member.

Section 4. Persons elected to membership shall sign the constitution and by-laws and pay an admission fee of—

Section 5. All topics presented at meetings of this association shall be open to discussion. In discussion no one shall speak longer than five minutes at a time, and when the time available is limited preference shall be given those who have not spoken, over those who desire to speak a second time.

Section 6. No noisy or otherwise disturbing features shall be permitted to

be in operation while papers are being presented or discussion of them taking place.

Section 7. These by-laws may be amended at any regular meeting of the association by a majority vote, and may be suspended by a two-thirds vote of the members present.

Opportunity was given for remarks, and none being offered, the vote of the meeting on the adoption of the by-laws as read was called for, the same being in favor of their adoption, it was so ordered.

THE OFFICERS.

The appointed committee next presented through Mr. Miller, the chairman, the following list of officers which, upon vote of the meeting, were accepted. J. R. Chittenden, president; Peter Johnson, Jr., secretary and treasurer; B. F. Replogle, A. W. Copeland, Jerry Fellers, and Henry Schumacher, vice presidents. These officers compose the executive committee of the association.

THE FARM DAIRY.

The chairman then introduced Professor Oscar Erf, of the State Agricultural College, who addressed the assembly on the topic of "The Farm Dairy." Professor Erf in prefacing his remarks, dwelt upon the importance of the dairy proposition to the West, first, because of its profitability, and second, because it concerns the fertility of the soil. He cited instances where today, in the eastern parts of the United States, the soil has gradually become cropless, there being less fertile fields than twenty to fifty years ago, and that dairying had now become one of the first industries of the rural people, what small crops were raised being put into dairying. In foreign countries, especially European, small crops only are capable of being raised, and the bulk, if not all, of these go into the business of dairying. Another instance is that observed in the Mohawk Valley in New York State, where land had been farmed for 200 years. That part upon which the benefits of dairying were utilized is now worth \$200 an acre, while adjacent land that has become barren and unfertile because improper care of the soil, especially the absence of the dairy industry, has brought the worth of the land to 10 and 20 dollars an acre.

Jefferson County, Missouri, once considered barren and possessed of a soil unprofitable for any farming occupation, was settled by Swiss emigrants, who, knowing nothing about farming except the dairy part, practiced their industry there and made a wonderfully fertile land of that county. And a last citation, that of the Cache Valley in northern Utah, where land subject to irrigation is worth \$200 per acre, small crops are raised, and dairying and sugar-beet growing are the principal industries that are making these people wealthy.

Now, if the dairy proves profitable on high priced land, why can it not be more profitable on cheaper land? Prof. Erf then gave statistics of a test made at the Agricultural College with 15 cows, whose milking was recorded, and costs of feed computed to ascertain the cost of the production of a pound of butter fat. The highest cost proved to be 24 cents and the cheapest produced butter-fat cost 8 cents per pound. As the usual price paid for butter fat is 22 cents per pound, one can readily observe that the average of the costs of production given, would give the farmer a nice profit. The average Kansas cow gives about 97 pounds of butter fat per annum. It is not extraordinary of a well cared for animal to produce 400 pounds of butter fat per annum. It is far better to keep fewer cows and give the few better care; it is more money to the owner.

How can we find five good cows? The dairy proposition is a business and one must sit down and figure. Prof. Erf suggested that a card be tacked up at a convenient place beside each cow, and a record of her milk and its test be kept for fourteen milkings. After seven weeks, weight and test another fourteen milkings, and thus on throughout a year, at the end of which time an accurate record of the cows' productiveness is obtained. To obtain the cost of the cows' maintenance, weigh an average feed given her and compute from that the cost for the year. The only thing one can figure against butter fat, is feed.

Then there is the important question of conserving the fertilizer produced by the cow. It is of imminent importance. "Right now in Eastern Kansas" the commercial article is being used. The produce of one cow can not be bought in the East now for \$30.

Prof. Erf then directed his talk to

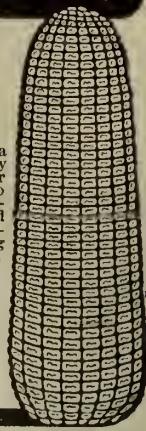

GROW BIGGER CORN

Mr. Farmer—if you want to grow bigger, better, brighter corn we can furnish you the tools that will help you do it. We can help you to increase your yield from the corn field. We can help you to make your farm pay and we can save you work. Our

"St. Joe" Double Row Disc Cultivator.

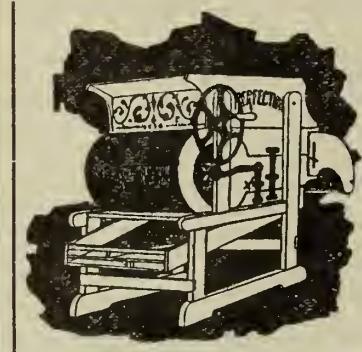

An improved modern machine for corn growers that cultivates two rows at a time will cultivate your crop in half the time and do the work better than any cultivator on the market. It will make your corn grow bigger and better and increase your yield because it cultivates so thoroughly and so well. It is easily handled and is an improved machine all over-built for the up-to-date money-making farmer who appreciates good tools. The "St. Joe" will work to suit you. Ask us for circular describing cultivator features not found in any other machine—every one a time-saver that you ought to know about. Write for it today.

ST. JOSEPH PLOW CO.,
Box 12 St. Joseph, Mo.

Do You Know?

That one handful of noxious weed seed to a bushel of your grain, if planted, will absolutely ruin the crop. There are many cleaners that will remove all but that last handful of the weed seed from your grain, but the "Perfection" is the machine that does the work the way it should be done. Better own the machine that is easy to operate, easy to understand, and yet does its work so perfect that your crops are increased 25 per cent to 50 per cent. :: ::

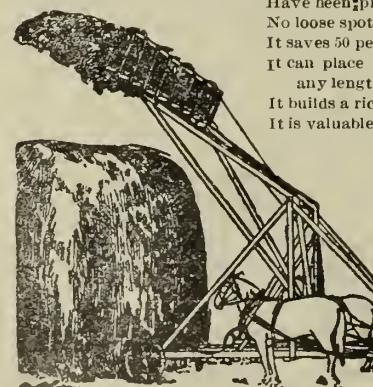

A "Perfection" cleans, separates and grades anything from Corn to Red-Top.

Write us today and we will tell you what it will do as well as show you how it does it. Be sure and tell us the kind of grain you raise.

the different types of milk cows, explaining with the aid of charts, the conformation found in the profitable dairy type, and where they could be found when examining any cow. He dwelt upon the care of the animal, both in wise feeding and gentleness in the milking process, explaining the increased good derived from observing this care. He urged upon his hearers the wisdom of beginning the business of dairying, even though on a small scale to start with; and that once launched therein, the fears of drought or prairie winds need have no terrors. He reiterated the warning given in his first remarks, that continuous cropping of the soil with no variation of the crop, will sooner or later bring about a barren condition unless some such preventive, as dairying were introduced to balance conditions. The West needs more alfalfa, also more dairy cows.

Upon the conclusions of Professor Erf's address, the chairman presented Professor TenEyck, who spoke on

SOIL CULTURE.

Professor TenEyck is at the head of the Agricultural Department of the Agricultural College, and is a most able scholar and a tireless practitioner in his profession. His reception was no less cordial than that tendered Professor Erf when that gentleman arose to talk upon dairying.

Professor TenEyck opened his address by the statement that in farming, there is no set of iron-clad rules. While the principles of agriculture are about the same in all places, experiments and experience are necessary in the cultivation of the soil and the growing of crops, before conclusions can be determined. The three important considerations with any crops' improvement, are: The breed, or quality of the seed, the feed for the crop, and the methods of its culture. It has long ago been satisfactorily decided, that the hard, red types of wheat are best adapted for the West, but there are now no pure stocks being grown, owing to the quality of the seed having deteriorated by inattention to breeding or selecting. Farmers should give this question more attention. Select seed especially for seeding purposes, for special fields to produce seed stock, by planting a piece of the best ground to best grade of seed obtainable, and under best conditions possible to make for that special crop. Harvest at the right time and care for the grain in the right manner. Kansas conditions must make Kansas crops, and selection and culture are the secrets.

Good seed can not be obtained in one, two, or five seasons, but it takes fifteen to twenty years of careful growing to obtain results desired.

With regard to the feed of a crop, nitrogen, potash, and phosphorus are the three essentials that provide sustenance to the growing grain. Wheat requires a highly nitrogenous soil. These elements are soon exhausted from the soil and unless methods are introduced whereby new stores of them are replaced, the land soon ceases to be productive. For this reason, proper cultivation is of most vital importance.

In the sections of the west where light rainfall is the rule, the conserving of what moisture does fall is necessary to produce, or mature a crop. In the conservation of this moisture in the soil, we may say there are three steps to follow. First: Get water down in the soil. This is accomplished by plowing and discing, which opens the soil for water to penetrate, also prepares the soil reservoir for its reception. Second, repack, or firm up, the soil, connecting the furrow slice with the subsoil reestablishing capillary conditions, in which the surface soil draws the moisture to stimulate the plant life it grows. Ground should not be firm at the surface, but at the bottom of the seed-bed. Third: Keep a mellow surface by cultivation to prevent the evaporation of the moisture stored.

The seed-bed for all small grain should not be loose, but of firm body which gives the grain the best conditions for germination. As an example, a sample of dead wheat was presented, showing good rooting, and little stem. It had been seeded in soil that was well prepared, that is, plowed, and harrowed several times. The weather conditions of the winter and spring tended to air-dry the soil so that at present it is extremely loose. Under that condition, the wheat has died and, in all probability caused by the loose condition of the land, which aided wind, freezing, and drought to accomplish its death.

A firm seed-bed is essential to securing a good stand. It likewise gives

more vitality to the crop, and aids it to withstand a dry winter.

Prof. TenEyck reminded his listeners that one season does not make results. One must judge from the average of many seasons, as to whether proper or improper cultivation, that is, good, bad, or indifferent, pays the farmer the best. There is no gainsaying the fact that in the long run, the good farming will always show up the best returns.

He dwelt upon the value of the disc-harrow to the farmer, and stated various uses it could be put to, especially his experience in preventing the blowing of soil. He urged also, the use of the packer to obtain the ideal conditions for the seed-bed.

Upon his own suggestion, he made his address brief so as to have more time for open discussion.

GEO. K. HELDER.

Johnston, Caldwell, Kans., manager; Dec. 18, 19, 1906, at Wichita, Kans.; J. C. Larimer, Derby, Kans., manager; Feb. 13, 14, 15, 1907, at Caldwell, Kans.; Chas. M. Johnston, Caldwell, Kans., manager.

The State Experiment Station and the Kansas Stockmen.

EDITOR KANSAS FARMER:—Very properly the State Agricultural College and Experiment Station is working along varied lines, crop production, dairying, domestic science, horticulture, and general stock interests. The animal husbandry department has been at work on several very interesting experiments, in both breeding and feeding, and I thought the readers of your paper would be glad to know about these experiments. The great lack of good barns will prevent any extensive breeding investigations, but this will be remedied in time.

Five registered Tamworth sows, full sisters, were bred to different boars, one to a Tamworth, one to a Poland-China, one to a Duroc-Jersey, one to a Berkshire, and one to a Yorkshire. The progeny are now about a month old, and will be fed the same grain ration, and will be treated exactly alike until sold with a view to seeing which cross will produce the most economical feeders.

A notable experiment was conducted last year of great interest to men who feed cottonseed-meal to hogs. Two sows, a Duroc and a Poland-China, were put upon a ration of corn-chop and shorts and cottonseed-meal soon after bred, the meal being made a fifth of the ration. This was kept up until the end of the suckling period, and two weeks after the pigs were weaned they were given the same proportion of cottonseed-meal, soon raised to 25 per cent. Early in September the pigs began to lose flesh and two died. Then the cottonseed-meal was dropped from the ration and the pigs did well from then on. These pigs were kept in a dry yard without grass. Nobody has been able to explain the peculiar cause of cottonseed-meal poisoning, but

How LONG is Your Pound of Binder Twine?

DID that question ever occur to you while laying in your supply of twine for harvest? Makes a good deal of difference.

A pound's a pound the world around," it is said. But that rule does not measure the length, strength or quality of binder twine. And these are important to you.

The answer depends upon whose binder twine you buy.

Of course competing sellers can make all kinds of assertions. It's not bald assertions you want, but proof as shown by actual tests.

Now here is one test that has been carefully made—and what is better, one you can make yourself without any trouble.

Five hundred feet is considered the standard for length of sisal and standard twines. When your twine runs below this you are not getting what you are paying for.

Ten balls each of the International Harvester Company's regular Standard twine, and ten balls each of three competitors' standards were tested.

The above illustration shows that competitors' twines run from 467 2-10 feet to as low as 452 3-10 feet to the pound—while International runs above 503 feet to the pound.

There's a great difference in pounds, as you will observe.

Means a great difference in price also. The International Harvester Company twine is the least expensive twine, as you can figure at a glance. Frequently so called "cheap" twine is

Ten balls each of the International Harvester Company's regular Standard twine, and

enough tests have been made to prove the danger of continuing this ration very long. It is not considered safe to let hogs follow for over forty days steers that are being fed cottonseed-meal.

On October 9, 1905, three lots of late spring pigs, averaging 129 pounds, were put upon three different rations. The pigs were practically the same age and were almost the same in weight. Lot I was fed corn-meal only and gained one pound a day for 112 days. Lot II was fed corn-meal and meat-meal and gained one and three-fourths pounds a day. Lot III was fed corn-meal and alfalfa hay and gained one and one-fifth pounds a day. In lot I, one hundred pounds of gain cost \$4.32; in lot II, the cost was \$4.05; and in lot III, \$4.13. Lot I was fed 13½ bushels of corn, lot II, 14 bushels; and lot III, 14.06 bushels. The total cost of the feed was as follows: Lot I, \$48.05; lot II, \$80.07; and lot III, \$54.53. The cost per hundred pounds being a little less for lot I with the meat-meal.

A common question sent to the animal husbandry department is, "Which will feed better or cheaper, steer or heifer calves?" Two lots were therefore selected of ten each, all sired by same bull, and the experiment continued for 268 days. Both lots were fed alike, shelled corn and alfalfa, then corn-and-cob-meal and alfalfa, and later a little corn-meal was added. The heifers gained 422.5 pounds or an average of 1.48 pounds per day at a cost of 5.14 cents. The heifers put on more fat while the steers made more growth.

So many inquiries had come relative to the value of ensilage that a careful test was made. Six Shorthorn steers were in each lot. Lot I was fed corn-and-cob-meal and alfalfa, and lot II had added to this 11.9 pounds per day of ensilage. Lot I gained 629 pounds, lot II, 624 pounds, averaging 2.87 and 2.85 pounds. The cost of gain in lot I was 6.5 cents, and in lot II, 6.3 cents. Lot I had each day 20.24 pounds of grain and 17.92 pounds of alfalfa, while lot II had of grain 18.31 pounds and of alfalfa 14.95 pounds. Possibly had more ensilage been fed in the first half of the experiment the gains would have been larger. Professor Kinzer does not think the feeding value of ensilage is great enough here in Kansas to justify the building of silos unless it be for the handling of the first crop of alfalfa which is so often damaged by rains.

As sheep-feeding is becoming very common in Kansas, the animal husbandry department of the Agricultural College carried on an experiment last year that will interest every sheep farmer or feeder. Lot I fed on Kafir-corn and alfalfa gained in the experiment 22 pounds; lot II on corn and alfalfa, 22½ pounds; lot III on emmer and alfalfa, 26.6 pounds; lot IV on barley and alfalfa, 26 pounds; lot V on corn and wild hay, 12½ pounds; lot VI on corn and Bromus inermis hay, 21½ pounds; lot VII on corn, cottonseed-meal, and alfalfa, 24 pounds; lot VIII on Kafir, cottonseed-meal, and alfalfa, 25 pounds; lot IX on corn, dried blood, and alfalfa, 23 pounds; lot X on Kafir-corn and soy-bean fodder, 13 pounds. This experiment demonstrated the great value of alfalfa and barley and emmer for sheep-feeding.

A test was also completed recently to determine the relative feeding value of Montana and Mexican sheep. They were fed 101 days. Different feeds were used, but the comparison remained about the same in all tests.

Lot I.—Montana—Kafir-corn and alfalfa—41 pounds; Mexican—Kafir-corn and alfalfa—30 pounds.

Lot II.—Montana—cane and alfalfa—39 pounds; Mexican—cane and alfalfa—31 pounds.

Lot III.—Montana—shelled corn, cottonseed-meal, and prairie hay—36 pounds; Mexican—shelled corn, cottonseed-meal, and prairie hay—24 pounds.

Lot IV.—Montana—shelled corn, corn silage, alfalfa—37 pounds; Mexican—shelled corn, corn silage, alfalfa—31 pounds.

J. H. MILLER,
Manhattan, Kans.

Breeding from Immature Stock.

Is it a fact that by breeding young sows each year, you would in time breed your pigs small? Is there anything in it?

The sows do not farrow until they are 14 months old, and in picking out the brood sows, those of the largest size and having the greatest length are kept. The sire in most cases is a 2-year-old. Please write me what you know about the matter and greatly oblige.

H. G. LAMBORN,
Leavenworth County.

Breeding from immature stock will

certainly tend to reduce the animals in size and vigor if persisted in. Of course, it is necessary to use gilts from time to time as brood sows, but if care is used to see that they are well developed and of good size no harm will come of the practice, providing the sire is always an aged animal. A brood sow which has shown her value as a breeder should be retained and kept producing as long as possible. The practice of selling off all of the old sows each year and replacing them with gilts will tend to deteriorate the stock.

G. C. WHEELER.

Beef-Meal, How to Feed and Its Values.

Can you advise me through your valuable paper, as to the value of beef-meal? Have any experiments been made at the station? If so, with what results?

Our dealer recently had a car-load of beef-meal shipped in, and he is selling it at \$2 per hundred. Is it a paying investment to feed it at this rate? The hogs seem to eat it with a relish. How ought it to be fed, dry or in slop? Any information you can give me will be highly appreciated.

Marshall County. HERMAN SCHEIBE.

I enclose you a copy of Press Bulletin No. 149, which gives the results of our last experiment in testing Armour's meat-meal for swine-feeding. You will find in the columns of THE KANSAS FARMER of March 1 a brief statement of the results of this experiment.

This meat-meal is very rich in digestible protein, containing over 60 per cent of that nutrient. In this experiment we fed over one pound daily.

We have just begun another experiment testing two different brands of meat-meal, and expect to feed it at the rate of one-half pound daily to a 150-pound hog. This proportion will give a nutritive ratio of about 1 to 6, which is narrow enough for fattening purposes. It is more profitable to feed it in the form of a slop, as more or less will be wasted if fed dry.

G. C. WHEELER.

The Shorthorn Auction at Wichita, May 17.

Sale manager R. R. Mills, Des Moines, Iowa, writes that on Thursday, May 17, at Wichita, Kans., choice offerings of Shorthorns will go under the hammer, presenting one of the last and best opportunities of the season to secure bargains. A few additional entries can be accommodated, up to day of sale, and those having really good cattle to sell, will do well to communicate with him at once, the terms for selling being \$15 per head.

Quite a number of selected bulls of a high order and in nice condition, have been listed for this important event, consisting of Scotch and Scotch-topped cattle and embracing Young Marys, Rose of Sharons, Belinas, Rubys, Carolines, and other popular sorts. Mr. Henry Stunkel, Peck, Kans., is sending a carload of highly bred young bulls, mostly sired by his richly bred Cruickshank Butterfly sire, Victor Orange 196218, a son of Victor Butterfly 140117, dam Orange Bud 7th by Scarlet Knight 110111. Other sires are also represented in this consignment, including Hudson Captain 156300, a son of the pure Scotch, Village Captain 135732, and out of Miss Hudson Thistle, by the Harris-bred Cruickshank Victoria Thistlewood 95417. These are all a sappy lot of young bulls, low-down, thick-set individuals, that will suit the most fastidious admirer of the breed. They are from highly bred dams, and Mr. Stunkel writes that they are not only in fine condition, but the best lot that ever left his farm.

While mentioning the bulls in this sale, one of the attractions that should not be overlooked is a Cruickshank-topped Young Mary, listed by Mr. F. H. Foster, Lyons, Kans., being a deep-red 2-year-old, sired by Lovely Gloster 184123, a choicely bred Cruickshank, sired by the Barr-bred Gloster Chief 152747, and dam by the Bellows-bred Scottish King 400743. This youngster shows considerable breed character, and should be looked after by any one looking for an especially good one. Extended mention of all the other consignments will be given next week, and in the meantime those desiring catalogues, or wishing to make additional entries, should address at once, D. R. Mills, sale manager, Des Moines, Iowa. The sale will take place in G. O. Morgan's Riverside Barn, West Douglas Avenue, where such sales are usually held, and will begin promptly at 1 p. m.

Quroollo's Berkshires.

James Quroollo, the Independence, Mo., breeder of high-class Berkshires, the man who developed the sensational

BLOAT IN CATTLE IS DANGEROUS.
Bloat in cattle is a condition that always confronts the owner when turning them on pasture, and it is well to be prepared for such emergencies. Dr. J. A. Beatty, V. S., of Montrose, Colo., writes: "I have found a number of new uses for Zenoleum and a very valuable one in the alfalfa country is its efficiency in bloat. It is, without doubt, the quickest and surest remedy for bloated cattle I have ever seen. You should print this quickly so people interested can be informed regarding its value in such cases." Zenoleum is very reasonable in cost, \$1.50 a gallon, express paid. Most druggists sell Zenoleum. It is made by the Zenner Disinfectant Company, 61 Lafayette Ave., Detroit, Mich. An interesting 64-page book, "Veterinary Adviser," is free for the asking.

boar, Masterpiece, and sold him for \$1,000, starts his advertisement in this issue of THE KANSAS FARMER, and invites our readers to call and inspect the herd or write their wants. He has a splendid lot of pigs for the trade. A considerable number of them by the double-bred Masterpiece boar, Lord Bacon 87145. As 10 of the breeding sows are daughters of Masterpiece also it places the herd of Mr. Quroollo in the front in the number of salable pigs carrying the blood of this, the most talked of Berkshire hog of the present time. It is generally known among the admirers of the breed that this great hog recently sold for \$2,500, making him the highest priced Berkshire ever sold. Write Mr. Quroollo your wants.

Little's Successful Sale.

Although a dispersion sale of his herd of Shorthorn cattle, Colonel H. R. Little, of Hope, Kans., scored a distinct success and made one of the best sales on April 26, that has yet been made in the State this season. The offering included a number of old cows and several weaned calves, sold apart from their dams. Everything went. The center of interest was in the herd bull, The Rustler, who was sold to Frank R. Wilson, Glasco, Kans., for \$525. Some of the best bargains of the sale were the heifer calves sired by this bull. Mr. Wilson is to be congratulated on getting such a bull at such a figure. A change in business made Colonel Little feel that he was obliged to disperse his herd, and it is with regret that we note that another good breeder has gone out of the business. However, the dispersion of this herd may be the means of founding other herds and increasing the number of breeders of Shorthorn cattle in Kansas. The sale was as follows:

1. Herd bull, Frank R. Wilson, Glasco	\$525.00
2. O. L. Thisler, Chapman	60.00
3. C. W. Taylor, Chapman	200.00
4. C. W. Taylor	130.00

The 45 head sold for \$3,900; the general average was \$87 per head.

Gifford's Shorthorn Sale.

Everybody in Central Kansas who knows Shorthorn cattle also knows the Elmwood Herd belonging to the Giffords, who have bred these cattle for thirty years at Milford, Kans. On Wednesday, April 25, Mr. F. M. Gifford, the present owner of Elmwood Herd, conducted their twenty-second annual sale. The catalogue showed thirty-seven head, and they were good animals and well prepared for the sale. Owing to the late season and the pressure of farmwork it is almost impossible to get a farmer out of his field no matter how important the occasion. This fact alone is sufficient to explain the situation in which Mr. Gifford found himself at Manhattan on Wednesday last. He had good animals in good condition, but no buyers, hence the average was low for the quality of stock offered and the sale the least satisfactory one ever held by Elmwood Farm. There was one demand for the bulls in the offering, and the first few of them averaged more than \$100 each. Contrary to expectation and the general record of Shorthorn sales this spring the females brought slightly more money than did the males. This is the only case of the kind we call to memory for this season.

The top of the sale was brought by The Abbott 253713. This is a Young Mary bull by Red Gauntlet 3d, whose dam was a descendant of the famous Imp. Thistle-top. He sold for \$120 to W. E. Schwaneke, of Alma. A cow consigned by the Kansas Agricultural College topped the sale of females.

Among the buyers were the following: E. Wolf, Gaylord, Kans.; S. B. Amocoats, Clay Center, Kans.; A. A. Richards, Manhattan, Kans.; Kansas Agricultural College, Manhattan; J. M. Garver, Abilene; Henry Myers, Wakefield; Corey Bros., Talmia; E. Hanson, Olsburg; W. T. Worrall, Zeandale; O. B. Heath, Wakefield; W. A. Sharp, Riley; O. P. Randall, same; Jenkins Bros., same; W. F. Matthews, Wymore, Neb.; W. J. Wiessner, Ogden, Kans.; C. B. Gillett, Olsburg; Chas. Curry, same; Dan Roether, Milford; D. O. Wickstrum, Riley; N. L. D. Corey, Riley.

SUMMARY.

16 bulls brought	\$1,242.50
Average	77.91
11 females brought	890.00
Average	80.91
27 head brought	2,135.00

The Alysdale Shorthorns.

Alysdale, "the most beautiful farm in Kansas," is a delightful place to visit at any season of the year but especially so in the spring. Situated at the foot of Burnett's Mound, the highest point in Eastern Kansas, with the Shunganunga Creek winding through its wooded pastures; with its broad expanse of vivid green alfalfa, its commodious hay and cattle barns, its beautiful "lodge," and the air of prosperity and comfort which pervades the entire place, it will long be remembered by all who have visited it.

In perfect harmony with all its beauty and adding to it is the herd of Shorthorns. Born in the purple and reared under the most favorable conditions in the most favored State on earth, these Shorthorns but add to and perfect the landscape of beautiful Alysdale. They are at home there.

This herd is headed by Prince Consort 187003 by Imp. Prince of Perth, and out of Goldfinch, a full sister to the famous champion, Lavender Viscount. His calves leave nothing to be desired. They are fine, and a few of them are now for sale. There are a few other young bulls on this farm for sale also. One of them is a grandson of Gallant Knight, the magnificent herd-header of the T. K. Tomson & Son's herd. Another is by that grand old Lord Mayor, whose value to the breed can never be told, and who has made the herd of T. P. Babst & Sons famous. Yet another is by Mayor Valentine by Knight's Valentine. There are others. If you want a fine, solid red, Scotch bull that is ready for hard service and that will prove a money-maker, inquire of C. W. Merriam, Columbian Bldg., Topeka, or go to Alysdale and get him.

Gossip About Stock.

The Wellington Voice says the shipment of cattle from Texas, New Mexico, Colorado, and Western Kansas to the pastures in the Flint Hills of Southern Kansas will be larger this season than ever before; that the Santa Fe and Missouri Pacific roads will handle about 70,000 head and the Frisco and Rock Island about the same number, a large part of the shipment being transferred from one line to another.

J. B. Davis, of Fairview, Kans., who is known far and wide as a breeder of the best of Duroc-Jerseys, is better equipped than ever to supply his customers. The boars he has now for sale were sired by the second-prize yearling boar at the Kansas State Fair, and by Monarch, whose dam was a full sister of Ohio Chief. The dam of some of these best pigs is a granddaughter of Kansas Wonder. Altogether Mr. Davis has 120 pigs by Crimson Challenger, Kansas Wonder, and Monarch from which his customers may choose. One of his brood sows is by the grand champion of the Indiana State Fair. Another is by Kant-Be-Beat, and others are of like breeding. This is a mighty good bunch of hogs to buy from if you want good quality of the large, early-maturing kind. Mention THE KANSAS FARMER and write Mr. Davis. He is sure to please you.

The Blue Valley Creamery Co.

This immense business institution derives its name from the location of its birthplace. In the beautiful little city of Marysville, Kans., located on the banks of the Big Blue River, this company first saw the light. Here the business methods pursued and the quality of the product made caused this infant industry to grow by leaps and bounds and larger quarters and better railroad facilities became necessary. This caused the removal of headquarters to St. Joseph, Mo., with the retention of the original name.

After a few years of unexampled prosperity at St. Joseph, the business again demanded more room and a branch house was established in Chicago. This Chicago house has already cost \$50,000 to establish and only the beginning has been made. Plans are laid for the rapid extension of the plant to meet the demands of the business and approach the ideal of the owners.

The Blue Valley Creamery Co. is a great, big institution, and it has attained its present dimensions through fair dealing and prompt payments.

The Chillicothe Auction School.

Our energetic young friend, Col. Harry W. Graham, of Chillicothe, Mo., announces the opening of the next term of his auction school for July 9 next. Colonel Graham has made a remarkable record as an auctioneer, particularly of live stock, and his ability is such that his school is an assured success. Live-stock selling is a distinct profession and a very honorable and profitable one. With the growth of the pure-bred live-stock industry a great field has opened up for young men of ability to enter the auction field. The well-known auctioneers in the live-stock field receive from \$50 to \$100 per day and expenses. Most of them are kept busy nearly all the year, though their busiest season lasts about nine months. Write to Colonel Graham for catalogue and information, and mention THE KANSAS FARMER.

A Strong Institution.

One of the Kansas institutions that should have the support of every farmer in Kansas is the Farmers' Alliance Insurance Company, of McPherson. The company was founded eighteen years ago by men who believed it their duty to emancipate the farmers from the grasp of the great insurance companies of the East, who were piling up fabulous sums of gold at the expense of the tillers of the soil. The company has steadily grown to be one of the greatest insurance organizations of the country. A company which furnishes insurance at actual cost, and which gives value received in return for the premiums which it receives.

The annual report for the year ending December 31, 1905, shows that they have over 80,000 members scattered all over the State of Kansas, resources

REMEMBER:

That from the 1st to the 10th of each month, Dr. Hess will furnish veterinary advice and prescription free

If you will mention this paper, state how much stock you have, also what stock food you have fed, and enclose two cents for reply. In every package of Dr. Hess Stock Food there is a little yellow card that entitles you to this free service at any time.

Instant Louse Killer Kills Lice.

amounting to over \$256,000, and that at the present time they are carrying over thirty million dollars of insurance risks.

The business of the Kansas Alliance Insurance Company is managed by a board of fifteen directors, five of whom are elected each year from among the policy-holders. The directors select annually from their number, the officers of the company. I. F. Talbot has been president and C. F. Mingebenck secretary of the company for a number of years, and it is largely through their individual efforts that this organization has been made a great success.

To those who are familiar with the methods employed by the old-line companies in the conduct of their business, and the vast amount of the policy-holders' money which is spent annually in paying unreasonable salaries to their officers, the mutual insurance plan should appeal, and if you want to have your risks written in a mutual concern you should insure in the Farmers' Alliance Insurance Company, of McPherson, Kans. Read their advertisement in this paper.

Kate's Sore Shoulder.

Kate was a faithful old horse, always ready to do her day's work on the farm—then, besides, if Aunt Molly wanted to go anywhere Kate was always harnessed up because she could be trusted. She kept fat until last spring. There was a lot of muggy weather in seeding time and Kate's shoulder got sore and she began running down fast.

Uncle Stephen was very busy and neglected the sore, mistaking Kate's willingness for a sign that the sore was not painful. One night he came to the kitchen door plainly worried and told Aunt Molly that he wanted some soap and water for Kate's sore shoulder. Aunt Molly was all sympathetic, but she said: "Soap and water is the worst thing you can use. Haven't you got some Gall Cure? Father never would be without it."

But Uncle Stephen didn't like to be reminded about how Aunt Molly's father farmed and so he persisted in his soap and water.

Meanwhile Kate's sore shoulder was raw and the patient horse was getting distressed and poor.

Aunt Molly was a wise woman. She said no more about the Gall Cure, but that night she darned Uncle Stephen's stockings with a hard ridge on the heels. Next evening Uncle Stephen limped to the house, nursing big water blisters on both heels.

"Try soap and water," suggested Aunt Molly. Uncle Stephen said nothing, but that very night he sent the hired man to town for a box of Security Gall Cure, and Kate's sore shoulder was well in a few days, and she did her full share of work all the time.

Good Words for Caustic Balsam.

Giltner, Neb., Feb. 15, 1905.
The Lawrence-Williams Co., Cleveland, Ohio:

For calloused shoulder, enlarged joints, wire cuts on stock, and burns on human flesh, I have never found the equal of GOMBAULT'S CAUSTIC BAL-SAM.

E. HERRING.

Silver Creek, Neb., Feb. 1, 1905.

The Lawrence-Williams Co., Cleveland, Ohio:

I have found Gombault's Caustic Balsam one of the best remedies used for blistering under the throat in cases of distemper. Also unexcelled when diluted with linseed oil, for warts, cuts and bruises.

C. H. LEE.

Toronto, Can., June 21, 1904.

The Lawrence-Williams Co., Cleveland, Ohio:

I have used Gombault's Caustic Balsam more or less for about twelve years and have had much success. The last bottle saved me about \$14 in my stock, and I fully believe that it cured

**Pigs At Weaning Time**

Stand a chance of slow development for a time. Grain or sour milk is harder to digest than the milk of the dam. The digestive organs require special aid at this time. As the feeding period of the hog is short—and the shorter the better—it is expedient to strengthen and build strong every digestive organ while the pig is young. Dr. Hess Stock Food, the great hog tonic, makes pigs grow fast, healthy and strong; expels worms, aids digestion and assimilation and causes the maximum amount of the nutrition to be applied to bone and muscle building. Stockmen must remember that it is not the food consumed but the food digested that produces the profit. Increasing the digestive capacity of stock of all kinds, according to the recognized medical authorities, can be produced by the action of bitter tonics, iron and other medicines such as are contained in

DR HESS STOCK FOOD

the prescription of Dr. Hess (M. D., D. V. S.). Remember it is equally valuable for Horses, Cattle, Hogs, Sheep and Milk Cows. It has the recommendation of the Veterinary Colleges, the Farm Papers, is recognized as a medicinal tonic and laxative by our own Government and sold on a written guarantee at

5¢ per lb. in 100 lb. sacks; 25 lb. pail, \$1.60.

Except in Canada and extreme West and South.

A tablespoonful per day for the average hog. Less than a penny a day for horse, cow or steer. If your dealer cannot supply you, we will. Dr. Hess Stock Book free, if you will mention this paper, state how much stock you have and what kind of stock food you have used.

Dr. HESS & CLARK, Ashland, Ohio.

Also manufacturers of Dr. Hess Poultry Panacea and Instant Louse Killer.

The Mayor of Kalamazoo.

At the spring election in Kalamazoo, Mich., Mr. William Thompson, vice-president and general manager of the Kalamazoo Stove Co., with whose business many of our readers are familiar, was elected mayor by an overwhelming majority, on a platform calling for "a square deal, equal rights to all and special privileges to none."

Mr. Thompson's popularity with his fellow-townsmen was such that the majority by which he was elected was larger than any mayor of Kalamazoo has received in many years. Commenting on his election the Kalamazoo Gazette says:

"William Thompson was elected mayor of Kalamazoo yesterday by a majority unprecedented in recent years in Kalamazoo municipal affairs."

"Last night, Mr. Thompson's progress through the streets was one continuous ovation, men and women of all shades of political belief, pressing forward to offer him their congratulations."

"The election was, of course, a personal triumph to Mr. Thompson, but in reality the congratulations should have been bestowed upon the city of Kalamazoo."

"The city is the gainer, for it is the city which will profit by this election. Mr. Thompson is a busy man. He is at the head and front of one of the most extensive enterprises in the city; he has in his employ hundreds of workmen; the products of the factory of which he is the head, go in single shipments to every nook and corner of the land. He keeps his hand on every department of his business, for he is a man who not only "does things" himself, but who sees that every department of business under his charge also does things, and does them right. He is the last man in the world to neglect a duty, and this record is a guarantee that Kalamazoo for the next year at least, will have that which was promised in the platform on which Mr. Thompson was elected—'A business administration.'

**Dipolene****WILL SAVE YOU DOLLARS**

By preventing loss and sickness among your farm animals, time to save is before loss occurs. Keep your live stock free from disease. DIPOLENE will do it. It kills disease germs, destroys ticks, lice, fleas; cures sheep scab, mange, eczema. Protects against mosquitoes, and keeps stock in a healthy sanitary condition. It's easy to use, powerful, sure and pure; DEATH TO DISEASE but perfectly harmless to animals, hair, feathers or wool. A gallon makes 100 gallons dip. Write for price and FREE book, "DIPPING FOR DOLLARS."

CONDUCTED BY RUTH COWGILL.

The Man With the Hoe.

(Written after seeing Millet's world-famous painting.)

God made man in his own image, in the image of God made he him.—Genesis.

Bowed by the weight of centuries he leans.

Upon his hoe and gazes on the ground, The emptiness of ages in his face, And on his back the burden of the world.

Who made him dead to rapture and despair,

A thing that grieves not and that never hopes,

Stolid and stunned, a brother to the ox?

Who loosened and let down this brutal jaw?

Whose was the hand that slanted back his brow?

Whose breath blew out the light within this brain?

Is this Thing the Lord God made and gave

To have dominion over sea and land;

To trace the stars and search the heavens for power;

To feel the passion of Eternity?

Is this the Dream He dreamed who shaped the suns

And pillars the blue firmament with the light?

Down all the stretch of Hell to its last gulf

There is no shape more terrible than this—

More tongued with censure of the world's blind greed—

More filled with signs and portents for the soul—

More fraught with menace to the universe.

What gulfs between him and the seraphim

Slave of the wheel of labor, what to him Are Plato and the swing of Pleiades?

What the long reaches of the peaks of song,

The rift of down, the reddening of the rose?

Through this dread shape the suffering ages look;

Times' tragedy is in that aching stoop: Through this dread shape humanity betrayed,

Plundered, profaned, and disinherited, Cries protest to the Judges of the World,

A protest that this is all prophecy.

O masters, lords and rulers in all lands, Is this the handiwork you give to God, This monstrous thing distorted and soul quenched?

How will you ever straighten up this shape;

Touch it again with immortality;

Give back the upward looking and the light;

Rebuild in it the music and the dream; Make right the immemorial infames, Perfidious wrongs, immeasurable woes?

O masters, lords and rulers in all lands, How will the future reckon with this man?

How answer his brute question in that hour When whirlwinds of rebellion shake the world?

How will it be with Kingdoms and with kings—

With those who shaped him to the thing he is—

When this dumb Terror shall reply to God,

After the silence of the centuries?

—Edwin Markham.

What Is Worth While?

How seldom we stop to consider what is worth while! So easy it is to follow our impulses and to seek to fulfill our desires. Wealth and fame allure us; ease and luxury entice us; and we lose much of the real joy of life. We take the froth; we grasp the bubble; we are content with the hull and throw away the kernel. How many spend their entire life and energy ministering to their temporal wants alone, living to eat and wear clothes, laboring for that which satisfieth not.

The extremes to which mankind go in eating and drinking, in the use of extravagant and superfluous clothing is robbing them of the true pleasures. Is it worth while to live merely to satisfy these abnormal desires? The body must be properly clothed and nourished, and great care should be given it, for it is the dwelling place of the soul. But these material things should be subservient to something higher. The mind, the soul, is eternal. Is it worth while to go through life, spending one's energies for the body and robbing and staining the soul till it shrinks and dies? There are too many who are spending their lives laying up for themselves dollars—just dollars. Money is a good thing. It supplies many of the needs of humanity and satisfies many laudible desires, but it perishes, and a life spent just to amass wealth is a failure. Nothing seems to shrink the soul to a mere shadow like a life spent in such a way. It shows in the face. You can see nothing but dollars written all over it. Then there is the man who lives,

that he may get more land, more hogs, more cattle, and more horses.

It is worth while and is worthy of praise to acquire these things—but not to live for them alone, neglectful of the things that are eternal. Too little time is given to quiet, sober thought. The mind needs food that it may grow. One should try to read something helpful each day, something that will broaden the mind, and enrich the soul, and should endeavor by kindly acts and words to help another soul to grow.

It is worth while to take time to rest. I verily believe that some people think it is wicked to rest. There are two extremes, those who rest all the time and think it is degrading to work, and those who work all the time and think it is indolent and lazy to rest. A woman remarked to another that she lay down for a little rest every day, when the latter remonstrated, telling her not to do so as she would get into a habit. It is a splendid habit to get into. Even Jesus when on earth went into the wilderness or upon the mountain to rest, and His example is worthy of imitation. Nature also has her seasons of rest. In the long run, time and energy are gained by occasional rests.

It is worth while to cultivate cheerfulness and contentment because these attributes encourage the growth of the soul. It is worth while to get acquainted with nature, for it is the work of God, and to study His work helps us to know Him better.

It is worth while to keep alive the heart's affections; to practice the little courtesies every day, that not only make our own lives richer but inspire and encourage others. Many a heart has become shriveled and cold for the want of the sunshine of love from those with whom they are thrown in contact and because they have neglected the actions that are prompted by affection.

Too many married people neglect the culture of love, and alas! it languishes and dies. They think they have not time to waste in such foolishness. They must make a living. It takes no longer to say a word in a gentle and tender way than to be brisk and harsh. The tones of the voice say as much as the words. The home, when the husband is lover and the wife responds, is the home where there is peace and the children are themselves kind and affectionate. It is worth while to take time for these things.

Anything is worth while that makes for happiness and peace, that broadens the mind and expands the soul.

Children and Gossip.

It is often said that children are born mimics; and it is true that, with almost fatal facility, they follow the pattern that is set for them in the home. Since their wits are so keen, and their memories so retentive, it makes the mother's mission all the more difficult, especially in the matter of forming habits unconsciously. She must not only be sure that a child is learning to speak properly, but that the subject of his words is a proper one.

It is an easy thing to teach a child to gossip. When, for the sake of drawing forth quaint remarks, a mother encourages and even provokes little tales of playmates, she is cultivating in the child a loose tongue. To gain a child's confidence is one thing, and to let him believe you wish to hear trifling personalities is quite another.

Where shall a child learn careful discretion and a wise reserve in family matters if not in the home? He should never hear unkind comments or little private experiences detailed to casual visitors or in short-lived intimacies. Children are discerning and intuitive, and, if encouraged, will soon learn to pry upon their fellow creatures and keep a watchful eye out for the subject of an amusing tale.

One of the joys in a child's play is to surprise and astonish some one. They enjoy the applause of others, and, if this enthusiasm is aroused by relating some little happening in which a friend appeared to a disadvantage, it soon becomes his habit and pleasure to be on the watch for such things. The habit is hideously insidious, and will soon undermine a healthy nature.

An injudicious mother may, by mere thoughtlessness, lay the seed for this

Her Majesty's Sewing Cabinet

"Enclosed find check for Sewing Cabinet. It is fully up to expectation and my wife is greatly pleased with my purchase." F. M. BUSHNELL, Cashier, Richland Savings Bank, Mansfield, O.

We receive such letters daily. There are no disappointments—it pleases them all.

This graceful, handsome piece of furniture is produced by the hands of careful, painstaking craftsmen in our own little workshop.

Each Cabinet is completely equipped with everything a woman needs to sew with, and here are fourteen pockets that hold all of her unfinished work—keeps all the sewing together. It's a perfect delight—"makes real pleasure out of real work"—and is just the thing any Kansas Farmer reader will enjoy.

Write for our free descriptive booklet with prices for the different styles, and also please tell us the color scheme of your sewing room that we may suggest a cabinet that will harmonize with its furniture, fittings and decorations. We pay the freight.

ART CRAFT WORKSHOP, 342 Dearborn Street, CHICAGO, ILLINOIS

habit-growth by asking too many questions, such as, "Where did your friend go?" or "What was your friend's mother doing to-day?" or, perhaps, "Who was calling when you were there?"

Such "leaders" will induce a child, who is pleased with attention, to run on beyond the border of good breeding, and, be it said with sorrow, sometimes beyond truth.

A mother who had fallen into this unfortunate habit of "title-tattle" conversation with her little girl, brought home a friend one day with whom she had been lunching. "What did you have to eat?" asked the child, innocently, and, when rebuked, replied, with tears, "You always ask me when I go anywhere."

In contrast to this, is another mother who was heard to say to her daughter, after a story of wrong words and bad temper had been told, "Don't let any one know about it, but try to help her break up the habit."

A wise and high-minded mother will let her children realize that she is not interested in personal stories, that they do not lead to further talk, and the child will soon choose something that does wake responsiveness. Being easily molded and anxious to please, they will soon learn to give out what is required of them, which ought always to be the best.—The Housewife.

Disparaging People.

There are people who disparage everything and everybody. They are constantly looking for faults and blemishes. There are homes where the children hear continual criticism from their parents, where the conversation is made up largely of adverse judgments of everybody and everything, where every character is dissected and the flaws rather than the good traits held up to view. Whether these judgments be just or not, the effect upon the children is the same—they learn suspicion, contemptuousness, and denunciation, three things quite unnatural to the child mind. As a result we have pessimists, made such not by harsh experiences of life, but by the habit of looking on the wrong side. Parents should remember that their view-points are those of the little ones, and will be theirs until each young life has its own experiences.

Impatient people water their miseries and hoe up their comforts; sorrows are visitors that come without invitation, but complaining minds send a wagon to bring their troubles home in. Many people are born crying, live complaining, and die disappointed; they chew the bitter pill which they would not even know to be bitter if they had the sense to swallow it whole in a cup of patience and water.—C. H. Spurgeon.

No one can do anything to-morrow.—Malthe D. Babcock.

Death of Floral Lawn Cause, Smothered by Dandelions

The dandelion pest has had its day. For one dollar you can get an instrument that can be used by women and children as well as men that will pull dandelions and other noxious weeds at the rate of one thousand an hour, and leave not a drop of dirt nor a visible tear in the sod. No stooping nor bending and is a pleasure not a task to operate it; delivers automatically the weeds pulled, and your hands are not soiled, nor your back tired, no grunting nor humping around to do your work. Pulls any dandelion or weed when tap root does not exceed 16 inches in length. Send one dollar and we will deliver free at your door.

The Standard Incubator Co. PONCA, NEBRASKA

The Young Folks**Do All that You Can.**

"I can not do much," said a little star,
"To make this dark world bright;
My silver beams can not pierce far
Into the gloom of night;
Yet I am part of God's great plan,
And so I will do the best that I can."

"What can be the use," said a fleecy
cloud,

"Of these few drops that I hold?
They will hardly bend the bly, proud,
If caught in her chalice of gold;
But I, too, am part of God's great plan,
So my treasures I'll give as well as I
can."

A child went merrily forth to play.
Put a thought, like a silver thread,
Kept winding in and out all day

"Through the happy, golden head;
Mother said, "Darling, do all that you
can,
For you are a part of God's great plan."

She knew no more than the twinkling
star,
Or the cloud with its rain-cup full,
How, why, or for what all strange
things are—

She was only a child at school.
But she thought, "It is part of God's
great plan,
That even I should do all that I can."

So she helped another child along
When the road was rough to her feet,
And she sang from her heart a little
song

That we all thought wondrous sweet;
And her father—a weary, toil-worn
man—
Said, "I, too, will do the best that I
can."

Our best! O children, the best of us all
Must hide our faces away
When the Lord of the vineyard comes
to look

At our tasks at the close of day;
But for strength from above—'tis the
Master's plan—
We'll pray, and then do the best that
we can.

—Margaret E. Sangster.

Fleetfoot; the Autobiography of a Pony.
CHAPTER VIII.—THE LAST DAY.

After the snow had melted from each
secluded spot and the spring had come
and was deepening into the full glory
of summer, the children began to talk
of "the last day." A vague fear came
over me when such a thing was men-
tioned, for I thought that by the last
day they had reference to the end of
the world. A sad experience such
would be for me who was enjoying life
so greatly to be called into some other
realm and find myself separated
from friends and old acquaintances.

My relief and pleasure were there-
fore excessive when I found that no
more serious casualty awaited us than
the closing of the term of school with
"appropriate exercises." For two or
three weeks before this remarkable
event the pupils were in such a state
of excitement in regard to their reci-
tations and dialogues that they paid
but small attention to me, who had
hitherto been their chief source of
amusement. Strange as it may seem,
my feelings were not hurt in the least
by the knowledge that I was being
overlooked and neglected; the only
trouble was the fact that I was getting
quite fat and lazy for want of exercise,
and by constant dozing under the
spreading branches of the big maple
tree in the corner of the yard. The
tree was so far from the school-
room that I missed much of what
was going on inside its walls,
but sometimes I could hear the sound
of the organ with the accompaniment
of many childish voices, and as the
clear notes rose higher and higher the
breeze wafted in my direction the
words:

"My country 'tis of thee,
Sweet land of liberty,
Of thee I sing."

The song went on and on, becoming
sweeter and more melodious as the
youthful singers caught the patriotic
ardor of the lines, and when the beau-
tiful song was finished the summer
evening was drawing to a close. I re-
member well how the air had become
a little cooler; from over the hill in
neighbor Gray's pasture came the soft
tinkle of bells as the well-trained cows
wended their way homeward. Off in
the distant timber a wild bird uttered
a series of warning cries, but near me,
all was silent and in my mind still
echoed the closing lines of the chil-
dren's song.

"Author of liberty,
To thee we sing."

I could not get away from the words
which impressed me so, for there, in the
hush of evening time the marvelous
influence of the Unseen had come over
me, and I, dumb creature though I
was, felt awed and wonder-stricken at
the perfection of His plan.

In due time "the last day" came.
About 7 o'clock in the morning Lyall,
arrayed in his Sunday's best, harnessed
me to the buggy with the conspicuous

red running gears, and in honor of the
occasion planted several small flags in
my bridle.

We had waited only a few minutes in
front of the house when out came Mar-
cella radiant in a pink dress and wide
hat of the same color, under the flap-
ping brim of which hung a thick gold-
en braid tied with a generous bow of
pink ribbon. She carried a potted
plant that looked cool and pretty with
its shining green leaves and tiny white
blossoms. She carefully made room for
it in the buggy and then Mrs. Dearcot
came out of another door with her
arms full of flowering plants of differ-
ent heights and constitutions. Some
looked dark green and robust, while
others had the sickly hue of the hot-
bed, whose chief charm, I suppose, lay
in their frailty.

Arriving at the school-house, we
found all the pupils in holiday attire,
and their number considerably in-
creased since the day before, for many
had brought younger brothers and sis-
ters that they might also enjoy the en-
tertainment.

The teacher and some strange young
ladies came into the yard and assisted
Marcella with the plants, while Lyall and Archibald Lamb took off my harness
in spite of the repeated requests
from the other boys for a ride behind
"the blue racer."

"Pony is not a green racer, anyhow,
young men," remarked Archibald,
blandly, "and I think it would be more
in order for you to retire and practice
reading your essays, 'Kindness to An-
imals' and 'Cruelty vs. Humanity.'" Thus upbraided the lads departed in
search of new fields to conquer, and when I was attended to, Lyall and Archibald joined them and in a short time the whole school was engaged in a vigorous game of "Andy-over" [antonio-over]. But while the fun was at its height the bell rang and the serious business of the day was taken up.

At recess I was again harnessed and
hitched to a trap which some one had
left on the road. This rig had a long,
narrow bed, and although it was very
light indeed, I was by no means proud
to find myself between the shafts. Lyall
was the driver and we started off
at breakneck speed in the direction of
home. We drew up at the hitching
rack and Lyall went into the house. He
soon emerged bearing two baskets and
his mama followed with one more.
Lyall hurried off again, returning in
a moment with a sack of apples. Just
as he came in sight I guessed what he
carried and he coming excited whinnied
repeatedly, which performance of mine
caused young master to laugh merrily
as he dived into the depths of the sack
and fed me as many apples as I could
eat.

After assisting his mama and little
Doris (who had by this time appeared
on the scene with a small jar of
pickles) into our odd vehicle, Lyall
turned my head around and away we
rattled down the road. But I was
much subdued by this time, for I
thought if Mrs. Dearcot was not humili-
ated by the experience I could
stand it very well.

As we turned into the school-yard I
could hear the clatter of dishes and
the sound of many voices. The scene
was a cheerful one, and it still remains
clearly in my mind. The long tables,
whose whiteness were relieved at fre-
quent intervals by bright bouquets of
late wild flowers, children running
here and there, more hindering than
helpful; women rushing in all direc-
tions with well-filled dishes; tall
school-girls laughing, chattering and
teasing one another. All were enthusi-
astic and wideawake; even the small
toddlers sang snatches of songs and
danced cake-walks for the amusement
of their elders.

The dinner was eaten in merriment,
and as I was not far away, every minute
or so some good-natured individual
would offer me chicken, pickles, or
fruit, according to his or her idea of
what was delicious. I had notions of
my own concerning the fitness of
things, and while some of the viands I
accepted gratefully there were others I
politely declined.

About 1 o'clock in the afternoon a
carriage drove up, and it was whispered
that the "county superintendent"
had arrived. Soon quietness prevailed,
and at the tinkle of a bell all were
seated on the long benches on the
shady side of the school-house. The
low-hacked organ was brought out
and placed under a giant tree. Songs
were sung, pieces were recited, and in
one affair called a dialogue, it appeared
that Archibald was in a great hurry
to catch a horse thief, and to my con-
sternation hastily slipped a hirle over
my ears and spurred me several yards
and back, at which performance great
applause was evoked. Even the super-

LOWELL INGRAIN CARPETS**"The all wool kind"**

We have been telling you for weeks WHY you ought to insist upon get-
ting a LOWELL INGRAIN the all wool kind—when you buy a carpet. Thou-
sands have taken our advice and are highly pleased.

ISN'T IT TIME FOR YOU TO CONSIDER BUYING

Remember these points: Cover the whole floor—it's warmer, and easier
to take care of; can be used on both sides, a great saving. LOWELL
INGRAINS are made that way; can be had in newest styles and colors, just
like high grade carpets. If it is wound on a hollow stick, it's a genuine
LOWELL INGRAIN.

When you buy carpets, ask the local dealer for
LOWELL INGRAINS. Look for the hollow stick
and run no risk. Don't accept any other.

intendent seemed to enjoy it immensely. One of the numbers proudly announced by the teacher was, "Playing Go Sce, by two little girls." The two little girls in question proved to be Marcella and her bosom friend, Daisy Floyd. I hoped it would be a success for Marcella's sake, and I was not disappointed. Very quaint and sweet the pair of little lassies looked in their spectacles and long dresses, and the grown up language that they used was simply admirable. When the buzz which followed this act subsided, the superintendent arose, and after talking earnestly to one boy and three girls, who stood in a respectful row, he gave them each a white piece of paper, and then the secret came out. Those four young people were graduates of the eighth grade! After that the whole school (superintendent included) sang a stirring song which sounded like "Auld lad is sighing."

Then every one shook hands and congratulated the others on the part they had taken. The evening shades began to fall as we left the school-house which now looked lonely and silent.

Again there were "good-bys," and as the gate swung finally on its rusty hinges I am nearly sure that all of my friends felt as I did, "A joy akin to sadness," in bidding farewell to the last day.

The Little Ones

Jack's Plowing.

Out in the field in the sunshiny weather Jack and the farm-boy are plowing together. The dandelions in bloom by the wall twinkle gaily at Jack; and the robins call From the apple-tree boughs, "Ho, Jack! look here!" While the chipmunks are chattering, "Come, Jack, my dear!"

Put Jack keeps on with his plowing. The plow is high, and the dimpled hands Must reach for the handles, 'twixt which he stands. The south wind lifts the loose brown rings 'Neath the sailor hat with its flying strings, And kisses the lips pressed tightly together, When out in the fields in the sunshiny weather

Jack lends a hand with the plowing. Up and down the long furrows brown He manfully trudges, a tiny frown On the smooth broad brow, so earnest is he. "We has such lots of work to do, Jim, hasn't we?" If I didn't help you, now what would you do?" Says Jim. "Master Jack, if it wasn't for you, I'd never be done with the plowing."

The sun grows hot, the lazy breeze scarce stirs the houghs of the apple-trees. The soft earth clings to the moist little hands, When at last, at the end of a furrow, he stands And looks toward home. "My mama, I guess, Will be 'fraid 'though a man in the house, unless I did come home from plowing."

Such a dirty boy as runs home at last! Such a dirty boy! but mama holds him fast, And kisses the dimples that come and go As he tells of the morning's fun, till, lo! The white lids droop o'er the eyes of brown, And in the meadows of Slumber-town Jack still goes on with his plowing.

--Mabelle P. Clapp, in Zion's Herald.

A Kitten Story.

The Schnabel children were the owners of a very fine old cat, which had a very enterprising family of kittens. A little while before we came away they presented us with one of these kittens; and it was in our parsonage for several weeks. When we came to move, we gave it back to them again: and it was very laughable to note the perplexity of that little cat on account of the change of language. When the Schnabel children would call the kittens to come to their dish of milk, they used some German words to attract them, whereupon all the little German cats would scamper away to their meal; but the little adopted one that had learned English would stand off by itself, the very picture of loneliness, until the "Come, Kitty," was spoken to it in good English--Christian Endeavor World.

"Leave nothing to what is called 'luck' and you will generally be what is called 'lucky.'"

"Listen to others, pro and con, then use your own judgment. Final success is due to independent good judgment."

A Food to Work On

Work! Work!! Work!!!

Lots of energy is needed to keep up the pace. In the struggle, the man with the strong body and clear brain wins out every time.

The man of to-day needs something more than mere food; he needs a food that makes energy--a food to work on.

Although some people may not realize it, yet it is a fact, proved and established beyond doubt, that soda crackers--and this means **Uneeda Biscuit--are richer in muscle and fat-making elements and have a much higher per cent of tissue-building properties than any other article of food made from flour.**

That this is becoming known more and more every day is attested by the sale of nearly 400,000,000 packages of **Uneeda Biscuit, the finest soda cracker ever baked. An energy-giving food of surpassing value--sold in a package which brings it to you with all the original flavor and nutriment perfectly preserved. Truly the food to work on.**

Whoever you are--whatever you are--wherever you work--Uneeda Biscuit**.**

ART PROGRAM.

Jean Francois Millet.

- I. Millet's life at Barbizon.
- II. "The Angelus."
- III. "The Man With the Hoe."
- IV. Reading: "The Man With the Hoe."

I. Barbizon is familiar to those who have been using the art programs, as a quaint little village in the forest of Fontainebleau in France, the camping ground of artists. In the last of these

art programs Millet was left in Paris with a second wife and a growing family. It was on the eve of the Revolutionary War, and he was extremely poor. The cholera broke out and he decided to leave and come to this quiet and picturesque place, to which he and his family had to walk. Here he was happier near field and forest, but necessity compelled him to work from morning till night. He remained in this place twenty-six years--the rest of his life.

II. Almost every one has seen a copy of this famous picture--"The Angelus." Once seen it can not be forgotten. There is something entrancing about it. The father is standing cap in hand, his head bowed; the mother bowed and hands folded, at the sound of the evening bell that calls for prayer. It is said that this picture represents the three chief factors of life--labor, love, and worship. This picture was first sold for one hundred dollars, dire necessity, but later brought the highest price of any modern picture.

III. This picture, "The Man With the Hoe," is not pleasing to look upon but it is very interesting and true to French peasant life. Weary with toil he has straightened himself up and is resting his weight with his hands upon the hoe for a moment, to breathe.

IV. This poem, which is printed in the Home Department this week, may be read in connection with the study of this subject. It is interesting to know what Edwin Markham thought as he studied the picture. He is an American poet and lived in California the early part of his life and began to write poetry for a California paper at a very early age. This is his best known poem.

Domestic Science Club.

A club has been organized at Berryton, known as "The Domestic Science Club," which holds its meetings every two weeks at the home of the members in alphabetical order.

At the last meeting a program was rendered consisting of roll call, answered with items of interest to the housekeeper. The following papers were then read: "Housekeeping and Home-Making," by Mrs. C. A. Kline; "Hygienic Care of the Bedroom," Miss Lucy Popenoe; talks on "Germs Most Common in the Home,"

CHEAPER FARM LAND

SOUTHWEST OFFERS BEST OPPORTUNITIES FOR SECURING HOMES

Many farmers in the Northern and Eastern States are selling their high priced lands and locating in the Southwest. Many who have been unable to own their homes in the older country are buying land in the new country.

Unusual opportunities exist along the lines of the Missouri Pacific-Iron Mountain Route. The rich, alluvial, delta lands and river bottom lands of Southeast Missouri, Eastern Arkansas, Louisiana, and Texas, capable of producing 60 bushels of corn, 150 bushels of cotton, 4 to 6 tons of alfalfa, 150 bushels of potatoes, and other grains, vegetables and hay crops, can be bought for \$7.50@15 per acre. When cleared and slightly improved will rent for \$4@6 per acre cash.

Uplands more rolling, lighter soil, adapted to fruit-growing--peaches, pears, plums, grapes, berries--also melons, tomatoes, and other vegetables, can be bought for \$5@10 per acre in unimproved state. Many places with small clearings and some improvements can be bought very cheap.

This is a fine stock country. No long winter feeding. Free range, pure water, mild climate. A healthy, growing country, with a great future.

Write for map and descriptive literature on Missouri, Arkansas, Louisiana, Texas, Kansas, or Indian Territory. Very cheap rates on first and third Tuesdays of each month.

E. T. Davis Co., Tippecanoe City, Ohio
Send your orders quick.

Mrs. J. C. Banta; and the "Arrangement of an Ideal Apparel Closet," Mrs. Mac. Quail.

At the next meeting roll call is to be answered with spring-time poetry. "Beds of Our Forefathers" will be read by Mrs. Harvey Faust, with a display of old quilts, spreads, and sheets. The following papers will be read: "Care of the Cellar," Mrs. E. W. Adams; "Moths," by Mrs. A. A. Adams; after which will follow the review of "The Review of Reviews," Mrs. Chas. Oneals; and special music.

The committee is to arrange a program for the coming two months. Lunch, consisting of three articles, is allowed to be served at each meeting.

L. MABEL WATERS, Sec. and Treas.

Another new club has been added to our Club Roll—"The Domestic Science Club," of Berryton. I am always glad to hear of new clubs, especially this kind, for I know that means better wives, better mothers, better homes, and frequently better men and women in the future generation.

The State Federation of Women's Clubs will meet at Lawrence the second week in May, beginning with the 8th and continuing to the 11th.

The Veterinarian

We cordially invite our readers to consult us when they desire information in regard to sick or lame animals, and thus assist us in making this Department one of the most interesting features of The Kansas Farmer. Kindly give the age, color, and sex of the animals, stating symptoms accurately, and how long standing, and what treatment, if any, has been resorted to. All replies through this column are free. In order to receive a prompt reply all letters for this Department should give the inquirer's postoffice, should be signed with full name and should be addressed to the Veterinary Department of The Kansas Farmer, Topeka, Kans., or to Dr. C. L. Barnes, Veterinary Department, Kansas State Agricultural College, Manhattan, Kans.

If in addition to having the letter answered in The Kansas Farmer, an immediate answer is desired by mail, kindly enclose a 2-cent stamp. Write across the top of letter: "To be answered in Kansas Farmer."

Ailing Steer.—I have a steer, among some I am feeding, that refuses to eat corn at all; he did not get stiff; keeps jumping out of corral, and slobbers all the time and is poor; he has been this way for a month.

Answer.—From the symptoms given would think that the steer had some teeth that were giving him trouble, and would have the animal's mouth examined by a competent veterinarian. There may be some foreign substance lodged in the tongue or cheek.

Swelling on Mare's Side.—I have a 7-year-old mare that has a swelling on one side just behind girth, that appeared first last fall. It kept getting larger until it reached the flank and extended to forelegs and breast. She got very stiff; punctured the swelling in several places and clear water came out until the swelling went down; used saddle on her before it healed inside, and it swelled again; it kept swelling until it broke, and discharged about 2 quarts of pus; it has never gone clear down since. She keeps fat easily, and feels good.

Answer.—I think the condition of your animal originally was a dropsical one, and later developed this condition of pus formation. I would advise you to continue the use of condition powder, and heal the sore by using a good local disinfectant.

Mare with Stiff Foot.—My 13-year-old brown mare has a stiff right foot; the whole foot seems to be so stiff that she can't lift it over anything, and if it is wet is much worse; if she has to pull it out of the dirt she gets helpless in that foot. I used a little blue stone water on it, but it didn't seem to help it. What would you advise?

Answer.—I would advise using a poultice of antiphlogistine on the stiff foot. Change the poultice as often as it gets dry, and I think you will have no trouble in removing the stiffness.

Horse Out of Condition.—I have a bay 10-year-old horse that does not thrive, and is getting thinner all the time. His hair is not in good condition. He eats heartily, but is not doing well. Weighs 1,100 pounds.

Answer.—I would advise you to have the horse's teeth floated, and then give the following condition powder: One ounce of pulverized nux vomica, 2 ounces pulverized gentian, 2 ounces pulverized iron sulfate, 4 ounces common salt, 6 ounces pulverized glycyrrhiza root, 2 ounces fenugreek; mix well with 10 pounds of oil-meal, and give a heaping teaspoonful night and morning in ground feed.

Actinomycosis (Lump Jaw).—I have a 5-year-old steer that has had a lump on his jaw for a year. Please give me a remedy.

Answer.—Would advise giving potas-

sium iodide internally in half drachm doses daily, for ten days, then withhold for three or four days and give again; give the potassium iodide in half a pint of water. Open the lump on the jaw freely, and inject tincture of iodine daily into the cavities.

Indigestion in Colt.—I have a 2-year-old colt that has never done well since being weaned. Hair is thick and fine, very thin in flesh, appetite good; drinks a good deal; seems uneasy; lies down a great deal, and at night moves and stamps her feet as though in pain. Last summer she broke out with little pimples like fly bites. Eyes are bright and she is always ready to eat. What is the trouble with her?

Answer.—You can hardly expect favorable results in treating your colt for several weeks as the trouble has been of long standing. I would judge that the animal had indigestion, and would recommend the following tonic: One and one-half ounces of nux vomica pulverized, 2 ounces pulverized gentian, 4 ounces pulverized iron sulfate, 2 ounces pulverized fenugreek, ½ pound sulfur, 6 ounces common salt, 8 ounces pulverized glycyrrhiza root; mix well with 10 pounds of oil-meal and give an even teaspoonful night and morning in ground feed; withhold the tonic for three or four days every four weeks, then begin again.

Warts on Calf.—I have a calf that is getting some warts on head and neck. What can I do to get rid of them?

Answer.—I would advise cutting the warts off; then burn the raw surface with a hot iron and heal the wounds with some of the common disinfectants you may have on hand.

Scours in Calves—Enlarged Knee Cap.—Had two calves take scours before Christmas; one got so weak it could hardly get up, but finally got all right. The other is worse than ever now. What is best to feed him? Have given him egg and flour. How shall I treat him?

Also have a horse that spit the hide on knee cap; it spread open and the leaders became inflamed; it healed well but is enlarged a good deal. Is it too late to help with a blister?

Answer.—I would advise giving the calf half a pound of epsom salts dissolved in a quart of water; 12 hours after giving salts give a teaspoonful of tincture of opium in a cupful of scalded milk. Repeat the dose of opium in twelve hours if the scours are not checked by that time.

It may pay to blister the enlarged knee cap, even at this late date, as it may reduce the swelling on the horse's leg.

Lame Pigs.—I have a brood sow with pigs that I turned on the alfalfa; in a week she got lame in one hind leg; she can hardly get up, and will not eat. I turned some other pigs in the next day and one of them is the same way. What is the cause and a remedy?

Answer.—I am unable to tell the exact cause of the lameness unless they have had too much alfalfa. Would advise taking them off the alfalfa and see if that will not remedy the trouble. Digestive disorders will often bring about the symptoms you mention.

Indigestion and Paralysis.—What is wrong with my pigs? I have 9 head of pure-bred Chester Whites about 3 months old. I fed them ship stuff with corn-chop in slop all winter. Ten days ago I turned them onto a 100-acre wheat and pasture land; they were all fat and thrifty; three days ago I noticed something wrong as they came up in the evening; they would suddenly drop to the ground with front parts, get up and walk a few feet and drop again. They are very jerky and seem sore about the shoulders. Have taken them off the wheat but they seem no better. I have given a little turpentine in the slop. What is the trouble and a remedy? A. D. H.

Sumner County.

Answer.—I think the trouble is a digestive disorder, and paralysis brought about by feeding too much corn. Would advise using bran and ground oats in the slop; better give the pigs an absolute rest from a grain ration for about a week, before you begin giving the oats and bran.

C. L. BARNES.

The Alpine Safe and Lock Co., of Cincinnati, Ohio, are making an article of great value to every farmer. This is a fire-proof safe. They are made in all sizes and prices to suit. Valuable papers and cash may be preserved in a good steel safe against loss by fire or burglars, and the cost of the safe is comparatively small. The Alpine Safe and Lock Co. is now advertising for agents to sell their safes and vaults. They offer good pay and require no previous experience. Here is a chance for a good man who wants to make good money. Mention THE KANSAS FARMER when you write.

Amatite ROOFING

No Repairs. When you roof your buildings with Amatite, your first cost covers *all* cost. After it is put on you can forget all about it, for it will require no repairs—painting, patching or tinkering of any sort—for many years. If your Amatite roof costs you \$10.00 to begin with, the cost ends there. And it is all because it is made to *wear* and does not rot, crack or peel off in a few years.

Send to our nearest office for free sample, and see for yourself how much better it is than the ordinary kinds.

BARRETT MANUFACTURING COMPANY,

New York Chicago Philadelphia Allegheny Kansas City New Orleans Cleveland

St. Louis Cincinnati Minneapolis Boston

BUILT TO BAKE—TOLMAN RANGES

Would you hesitate to buy a stove or range of us by mail if you were confident you could save \$15 to \$40 by so doing, and at the same time run no risk? That is exactly what we are offering you. A stove or range second to none in the world at a price far less than your local dealer can even buy such a range. We are able to save you many dollars, in your range-buying for three reasons, viz.:

1. Our direct selling plan, from factory to family (one profit).

2. We have a perfect factory and foundry of our own.

3. We have the experience of over twenty-three years.

For durability, economy, and baking qualities, our Tolman Ranges are unsurpassed. They are made from the very best of material, by skilled workmen, in our own factory. The ovens are large, square, perfectly ventilated, and fitted with oven thermometer, which prevents any waste of fuel from overheating the oven. No one has ever yet disputed the fact that Tolman Ranges are absolute range perfection. We challenge comparison.

We do not claim that we manufacture the only good range on the market to-day, but we do say, we will sell you a stove or range, far superior to any other on the market to-day, at a price far lower, and terms fairer than those offered you by any other stove manufacturer or dealer.

It is a well-established business principle to buy where you can buy the cheapest. QUALITY CONSIDERED. Your home merchants do this EVERY TIME. Not one of them will pay you a cent more for the articles you offer them than they can procure the same thing for of OTHERS, WILL THEY?

Then why pay your local dealer fifteen to thirty dollars more for a range than you can procure a better article for of us? Our "FACTORY TO FAMILY" plan enables you to buy of us by mail safer than of your local dealer.

We have pleased customers in nearly every county in the United States. Their letters show that we saved them money and gave them entire satisfaction. We know that we can give you satisfaction and save you money. You run no risk because we ship on

ONE YEAR DECISION TRIAL AND GIVE YOU A TEN YEAR GUARANTEE.

Our large free catalogue tells how steel ranges are made. Why some are good; some are bad, and how to tell one from the other. It tells you why you can buy of us by mail without risk and how to save the dealers' profits. Our free catalogue illustrates why our Tolman Ranges are "BUILT TO BAKE;" moreover, how a Tolman Range will cut your housework and fuel bill in half. It will pay you to investigate. Miscellany

That College Y. M. C. A. Building—Select Your Place in Table Below.

The following extract from a letter written by Mr. J. P. Anderson, of Agenda, is worthy of reflection:

"Having thought for some time to send my mite to you for the Y. M. C. A. fund, now after reading the letter of Mr. Dukelow, I will forward it at once. No doubt a great many Kansas farmers feel willing and able to help this worthy cause but yet continue to delay, and some will even forget."

There is no doubt as to the ability of the farmers of the State. They have been prospering year after year and no class of people is better able to contribute. Mr. Anderson states that there is also a willingness among the farmers to "help this worthy cause" but the trouble lies in the fact that they will "continue to delay, and some will even forget." "Everybody's business is nobody's business" is an old saying, and applies to such a canvass as is being carried on in this paper. The problem is how to get those interested in the canvass, who are also able to give, to do so immediately.

The following table of suggested donations may help some to choose the amount suited to their ability and interest:

SUGGESTED AMOUNTS FOR THE RAISING OF \$10,000.

No. of Subscriptions.	Amount.	Total.
20.	\$100	\$2,000
20.	50	1,000
40.	25	1,000
200.	10	2,000
600.	5	3,000
Miscellaneous gifts.		1,000
		\$10,000

The object of this canvass is to interest a large number of different people throughout the State. If farmers do not respond quite generally, there will be but one other way to raise the amount, and that will be to prevail upon some individual to give the entire sum needed. Several colleges and universities have been fortunate enough to interest some such person. Among them may be mentioned Mrs. A. T. Stiles, who gave \$30,000 for a building at the University of California; William E. Dodge, \$55,000 to Princeton University; Mr. and Mrs. E. B. Monroe, \$60,000 to Yale; Mr. A. S. Barnes, \$45,000 to Cornell; and Mrs. Helen Close, \$10,000 to the University of Iowa. The chances for getting some such donor to give to the Y. M. C. A. at the Agricultural College seems small and it might take months to find one. The only sure way is for a large number of the farmers of the State to respond quickly and liberally.

The following have sent in subscriptions to the fund:

Previously acknowledged.	... \$22,805.50
W. R. Stubbs, Lawrence.	100.00
J. P. Anderson, Agenda.	5.00
Alvah Sheldon, Eldorado.	1.00

THE INTERNATIONAL SUNDAY-SCHOOL LESSON.

(Copyright, 1906, Davis W. Clark.)

SECOND QUARTER. LESSON VI.

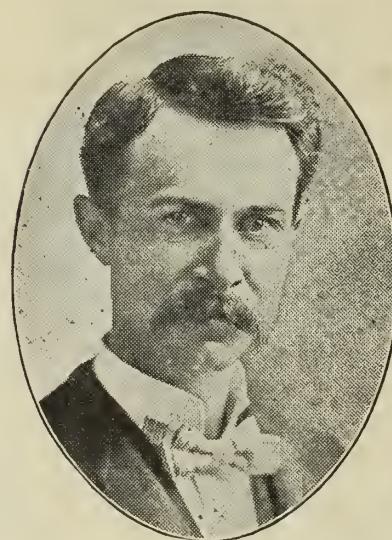

Matthew 13:24-30; 36-43. May 6, 1906.

The Parable of the Tares.

It is true yet in a sense that without a parable Jesus does not speak to the world. His whole system is a dark saying to the human mind naturally. Open eye, attentive ear, understanding heart, alone apprehend His meaning. There is need of moral earnestness which cries: "Explain to us the parable." . . . The parable of the wheat and tares is fundamental. It has been called a "brief and simple moral history of the world." It contains "the ground question of the philosophy of all times relating to the origin of evil." . . . The parable asserts that there is no existence of good or evil in this world apart from personality. Moral qualities have human souls as their only sphere. Virtue and sin root and bring forth fruit in men. Thus Jesus says, "The good seed are the children of the kingdom, but the tares are the children of the wicked one." . . . Those who with the docility of children have come to Jesus, to learn of Him and have His kingdom set up within, have become the wheat with which the Lord has sown the earth. So the tares

are the children of the wicked one. Evil roots itself in human souls. . . . As we look out and see a thousand million growing together as wheat and tares in this vast field, this age-long antagonism, this dread and poisonous admixture, we exclaim in language of the servants of the householder, "Didst thou not sow good seed? From whence hath it tares?" Jesus dismisses this purely speculative question with the declaration, "An enemy hath done this."

After a thousand volumes have been written on the origin of evil, we shall just know as much of it as Christ has told us here. Sin is here. Its deadly effects are apparent. The question is not so much, "How did sin get into the world?" as "How may we get it out of the world?" Jesus cautions the disciples against an attempted mechanical and forcible purification of the world. "Let both grow!" What rivers of blood would have remained unshed had the church always been guided by the teaching of this parable! . . . The present is a probationary period, in which change of character is possible. As St. Augustine suggests, "Those who are tares to-day may be wheat to-morrow." Again the opportunity is afforded to prove one's goodness genuine by steadfastness. As Daub affirms, "The enemy can put into the wheat the tendency to become tares." Only at the end of one's probation, when full proof of goodness or badness is made, can a final separation be effected. This will be done by the hand of Omnipotence, guided by unerring wisdom. . . . The general judgment is the official announcement, in the court of heaven and to the intelligences of the universe, of the destiny each soul has made for itself in its probationary state. . . . Then shall the righteous shine forth as if up to that time they had been under a cloud in their present unavoidable association with the evil.

J. T. WILLARD.

Director Kansas Experiment Station, and Professor of Chemistry, Kansas State Agricultural College.

In length of service in the college, Professor Willard is excelled by Professor Walters only. He is a graduate of the college in whose service he has labored so long. When he left his father's farm in Wabaunsee County to enter college he could not foresee the demand that the State would make for a life of service in a work wherein his rigid accuracy of thought, work, and statement is of the utmost importance.

The ninth annual announcement of the Colorado Chautauqua at Boulder, Colorado, has just come to our desk. It is the most complete book of its kind the association has ever issued, containing detailed information regarding railroad excursions, carriage drives, mountain climbs, natural scenery, platform program, summer school courses, living expenses, cottage and tent rentals, and many other items of interest to all prospective tourists. The book is highly artistic, the cuts being printed in two colors and the cover in three. In fact, we believe it to be the handsomest Chautauqua announcement we have ever seen. The book is free to all who are contemplating an outing in Colorado. The Assembly opens July 4 and continues five weeks.

Manure Doubled in Value.

The American Harrow Co., of Detroit, one of the oldest concerns engaged in the manufacture of agricultural implements, claim that their American Manure-Spreaders doubles the value of every bit of manure put on a piece of land.

The American Spreader breaks the manure up so fine that it is mixed in with the soil at once instead of lying on the surface in lumps to be broken up by time, weather, and cultivation.

Certainly this claim is a sensible one, and, to prove its truth, the American

Harrow Co. offer to let any responsible farmer use one of their Manure-Spreaders a month **FREE**. Their plan is to send you a spreader (freight prepaid) and you can take it home and use it a month just as if it was your own—bought and paid for.

If you don't find the spreader exactly as represented, all you have to do, at the end of the month, is to take it back to the railroad station and tell the agent to ship it on to the American Harrow Co. at their expense. You don't pay anything for the month you have used the spreader. That part of it is **FREE**.

If you do find the spreader as claimed by the American Harrow Co. offer you long-time terms—practically whatever time you wish—to pay for the machine.

No offer could be fairer than this and these people sell all the manure-spreaders they can make on the same plan.

This plan is very popular with farmers because the American Harrow Co. can be depended on to do exactly as they agree.

Judging by the tremendous increase in their business during the past few years, these American Manure Spreaders must be about the best going. At any rate, the makers offer the best kind of prof of their faith in them.

They have just had printed a new Manure-Spreader catalogue which is probably one of the handsomest books ever issued by an agricultural imple-

ment concern. The cover of the book is rough, heavy, seal paper embossed in raised letters with the word "American" in shining black on a bright red background. Every farmer should have a copy of this book in his farm library for the valuable information it contains. You can get it **FREE** for the asking.

Drop a line to the American Harrow Co. to-day saying you want it, and it will come by return mail postpaid.

Address American Harrow Co., 10130 Hastings Street, Detroit, Mich.

Important Tests of Binder Twine.

With the coming of summer, the careful grain-grower begins to think of harvest time. He long ago learned that it does not pay to postpone all his plans until the rush of the harvest season is full upon him, and there is no time to think—no time for anything but fast, hard work.

It will not be many weeks—not many days as a matter of fact—until "the sound of the reaping machine will be heard in the land." And with the thought of this comes one of the most important questions of the time—binder twine.

Probably no subject is of more practical interest to the grain-grower. It is one of the many matters of detail of farming that become "big things" at one time and another.

The binding twine may not be thought as important as the harvesting machine all the year round. But on its good qualities depend largely the success of the harvest. If it breaks, it stops the whole procession.

Its strength or weakness may mean the saving or loss of many dollars not only in money but in time.

It is therefore not remarkable that the merits of the various binder twines on the market have been the subject of so much discussion not only in the farm papers, but among grain-growers wherever and whenever they get together at this season.

In this connection, the International Harvester Company announces the result of some interesting tests.

Twines of four makes—the International and three others—were taken for comparison by measurement, and trials of strength.

It was shown that the International ran to 503.8 feet to the pound, while the other twines averaged from 467.2 down to 452.3 feet to the pound.

Ten balls of twine from each lot were tested for strength.

A capacity for supporting fifty pounds is regarded as the standard, experience having taught that twine that breaks at less than this strain is not reliable in the field.

Figures for the test of strength show that while the International twines averaged a capacity for standing 59.9 pounds, one of the others barely reached standard strength (50 pounds), and the other two fell short from 2.7 to 4.4 pounds.

Grain-growers generally will be interested in these practical tests, as both amount and quality of twine bought for the approaching harvest are matters on which full information will be desired.

The De Laval Booklet.

The De Laval Separator Co., of New York and Chicago, have lately issued a beautiful little booklet descriptive of the latest styles of their cream-separators. This little book is full of information and may be had free by addressing the Chicago office. This reminds us that, if there is any one page of THE KANSAS FARMER that is more attractive than any other, it is that on which appears the dairy advertising in which that of the De Laval Separator is always prominent. This is a money-making page for the farmer, and our pride in it lies in the fact that everything named there is clean and honest. There are no tin-can "separators" or other devices advertised to separate the farmer from his money without giving full value in return.

The De Laval Separator has long been before the public, and the fact that there are now in daily use about a quarter of a million of these valuable machines speaks volumes for their popularity and usefulness.

Look at the remarkable offer of buggies and harness made by the Erhard Carriage & Harness Company, of Atchison, Kans. This is an old, reliable firm that has been doing business for many years. Just now they have some especially attractive bargains. Think of it. A buggy for \$28 and a harness for \$5.60. They have all classes of buggies and harness at all prices, but they always have bargains. Drop them a line and mention THE KANSAS FARMER.

CONGO ROOFING

Horticulture

The San Jose Scale in Kansas.
PRESS BULLETIN NO. 150, ENTOMOLOGICAL
DEPARTMENT, EXPERIMENT STATION,
KANSAS STATE AGRICULTURAL
COLLEGE.

While no systematic survey of Kansas has been made to ascertain the absence of the San Jose scale in the State, the evidence available to date has given the impression that the pest has not occurred to any recognizable or at least serious extent within our boundaries. The testimony of orchardists and nurserymen in convention in the various horticultural meetings, the reports of those engaged in the inspection of nurseries so far as this work has gone, and the correspondence of the entomologists in the State schools has not disclosed the presence of the true pest, and many supposed cases have been ascertained by competent students to have been other forms of injury.

A month ago, however, there was received at the Kansas Experiment Station, from Mr. B. S. Williams, of Dodge City, an apple twig, crowded with the true San Jose scale, and as the indication was that of a seriously infested tree, a visit to the locality was made to determine the extent of the attack. An examination of the locality showed several apple-trees of ten years of age thickly incrusted with the insect, and in most of the residence lots in the surrounding quarter of the town the condition was the same, the fruit-trees of all sorts showing the insect in greater or minor abundance. Here and there was noted a tree of the apple, pear, or peach so thoroughly attacked that it was dead or dying, while others showed the presence of the scale in smaller quantities, permitting the relief of the trees if prompt measures were taken for the destruction of the pest.

Besides the sorts of fruit-trees above named, inspection showed the following to be more or less infected: Plums of all sorts both native and cultivated, cherries of several horticultural groups, apricot, plumcot, grape, currant, rose bushes of several types, and among ornamental or shade trees, Osage orange, cottonwood (one case), and Russian mulberry. So far as ascertained the scale did not occur on box-elder, black locust, honey-locust, elm, althea, the honeysuckles, Virginia creeper or splashes, though plants of these sorts, among others, were growing among or near infested fruit-trees. On the whole, however, the infestation was as serious as might be feared anywhere, including within the limit of the area about a dozen blocks in Ward 2 of the city, with scattered cases outside of this general section. An attempt to locate the site of the original infection was without result, owing to the general and even distribution of the pest within the area indicated. It was also found that suspicion could not be placed with likelihood of proof upon any nursery, as the trees were largely purchased from agents, and the places where they were grown were not known originally, or were not on record.

For the information of those who have not seen this insect, it may be described as a small sap-sucking louse, active when first born, but soon becoming immovable on the bark, leaf, or fruit, and secreting at this stage a flattened protective scale over its body, losing at the same time its more obvious insect structure, and devoting its energies thereafter to feeding on the sap of the plant, and producing young in great numbers. In cases where the scale lice are in moderate numbers, they will occur in small colonies or groups, or scattered singly over the bark, presenting then no striking mark to the vision unless one is looking for them. When scattered in this manner on younger bark, the tissue is generally reddened around them, a feature which lends to their more ready recognition. The adult females are the largest scales, slightly irregular in their convexity, of a dull gray or lighter, with a distinct boss or center of a different color and appearance. Young scales, also abundant at the present season, are smaller, more distinctly circular, and of a darker color, often nearly black. All sizes occur together in the clusters, frequently so crowded that the true color of the bark is not visible for the scurfy covering consisting of the numerous insects.

In May the female gives birth to young, and these travel over the tree in search of unoccupied spaces, which they occupy and then begin the se-cre-

tion of the protecting scale as above. With several indeterminate broods each season, the new growth is covered as fast as made, and the tree is not able to outgrow its enemy. The injury is done by the abstraction of the sap from all parts of the tree by the hundred thousand beaks throughout the entire growing season.

Owing to the form and feeding habits of the scale lice, the effective agents in their destruction are practically limited to the various washes and sprays that act as contact poisons or corrosives. Among these are crude petroleum, coal-oil, resin washes, and combinations of lime, sulfur, and salt, among others. Several of these are open to the objection that while destructive to the insects they also endanger the tree. Others can not be relied upon to kill the insects in all stages, necessitating the frequent repetition of treatment. At the present date the leaf and flower buds being expanded, perhaps as satisfactory a treatment as any is the application of a spray of moderately strong kerosene emulsion, previously preparing the trees by pruning off all that can be spared of the branches, to reduce the surface to be operated on. The application of this spray should be several times repeated during the spring and summer. This will not be completely effective, but may serve as a temporary check. It should not need saying that every infested twig and all other parts should be carefully picked up and burned, to prevent the further spread of the pest.

A more satisfactory treatment is the application, in the dormant season of the tree, of a wash or spray of the lime, sulfur, and salt mixture, as employed with good effect in eastern orchards. With this material, treatment must be deferred until the tree is again dormant, as the buds are now expanded.

The presence of this serious pest in Kansas orchards, even in the single case noted, is a warning that our State should be no longer without the protection of an effective inspection and quarantine law controlling the sale and shipment of trees and other nursery stock liable to transport this dangerous insect, and providing for the inspection of orchards, generally, over the State.

E. A. POPENOE.

Manhattan, Kans., April 24, 1906.

This Cleveland Cream-Separator is attracting attention throughout the country.

First, because it is sold direct at factory prices, and on a real free trial. No money in advance, no note to sign.

Second, it is the all ball bearing separator.

Third, it is the first separator that uses aluminum in its skimming device.

No matter how many cows you have, nor what your arrangements for marketing your milk or butter-fat, you ought to write at once for the catalogue of this machine.

You can get the catalogue by addressing the Cleveland Cream-Separator Co., at Cleveland, Ohio.

A Good Book Free.

At the time of the good roads meetings on the Santa Fe Railroad the company had printed a large number of pamphlets upon the use of the King split-log drag. This pamphlet was written by Henry Wallace, of Des Moines, Iowa, and was reproduced by the Santa Fe for special distribution in their good-roads campaign. There still remains on hand a number of these useful little books, and they are free for the asking. Drop a postal to Wesley Merritt, Industrial Commissioner, Santa Fe System, Railway Exchange, Chicago, Ill., and you will get one. They are free as long as they last.

Amatite—A Heavy-Weight Roofing.

The resisting ability of a roofing depends largely upon the amount of material there is in it—not upon the thickness nor upon the number of layers, but upon the actual density of the roof—that is upon its weight. A lightweight ready-roofing may be as thick as Amatite, but if it is not as heavy, roll for roll, it can't have as much good stuff in it. Amatite weighs as much as roofings that cost three times its price.

Free sample and booklet on application to the nearest office of the Barrett Manufacturing Company, New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Minneapolis, Philadelphia, New Orleans, Cincinnati, Boston.

A magnificent steel engraving of Hagerman Pass, the most famous mountain pass in Colorado, has been issued by the Coolroad Midland Railway. This engraving is 26 by 40 inches and suitable for framing. It will be sent to any address on receipt of 15 cents in stamp by Morrell Law, traveling passenger agent, 566 Sheldon Bidg., Kansas City, Mo., or C. H. Spears, G. A., Denver Col.

Grading Cream.

OSCAR HRF, PROFESSOR OF DAIRY HUSBANDRY,
KANSAS STATE AGRICULTURAL COLLEGE.

(Continued from last week.)

RANGE OF PRICE.

As a rule extras sell from one to four cents higher than firsts, depending somewhat on the supply, but the supply is never equal to the demand. Firsts sell from two to three cents higher than seconds, and seconds sell proportionately higher than thirds, but the demand is seldom equal to the supply. Since there is such a range in the market price of butter of the first and second grades, there should be a similar range between the first and second grades of cream, for it requires as great an effort to produce first-grade cream as to produce first-grade butter.

According to the score card, the flavor of butter is valued highest, and since the flavor of the butter depends on the quality of cream received, there should be a difference of at least four cents, and more legitimately a difference of five cents, between the first and second grades of cream. Likewise there should be a difference of not less than two cents, and more legitimately three, between the second and third grades.

Good flavor can only be produced by the proper fermentation, which requires a pure cream, hence the precautions that are necessary in handling cream to secure a good-flavored butter must begin from the time the milk is drawn. Any taint incorporated in the cream will follow the butter through all its stages of manufacture and onto the market, where it is discovered and a correspondingly lower price is paid for it. From this we see that the care of the cream while in the producer's hands will have a marked influence on the ultimate value of the butter.

The body of the butter can be governed largely by temperature, hence it is chiefly within the butter-maker's power to regulate this one point, which is also true of the color, salt, and package. The producer is held responsible for one point only, namely, flavor.

With this in view the development of the dairy business in Kansas depends on the care the farmer will give to his milk and cream and the care the creameryman will give to his butter in order to produce a product of the finest quality and one that will command the highest price. Cream or milk which tends to lower the grade of butter will lower the price of butter, and hence will make the dairy business less profitable.

THE GRADING OF CREAM.

With the above conditions before us it would be a legitimate plan for creamery companies to grade the cream they receive on a similar basis, and instead of paying a uniform price for butter-fat regardless of the quality of the cream, it should be graded and the cream having the best quality should receive the highest price. In this way a man, exercising great precaution in producing pure cream by building better barns, better milking stables, by getting better cows and feeding them better and keeping them healthier, by exercising great care in milking, by running the milk through a scrupulously clean separator and by cooling the cream and delivering it often in good sanitary cans, will receive a reward for his efforts and his expense, and will be encouraged to do even better. Nearly all other farm products, such as wheat, corn, live stock, butter, and cheese are graded and sold on their merits, so it is only fair to the man that sells cream that he should have a similar condition presented to him.

GRADES OF CREAM.

Cream should be graded as follows:

First grade, second grade, and third grade.

First-grade cream should be pure and sweet, containing not less than .2 of one per cent of acid, should have no undesirable flavors or odors, should be fresh (not older than three days), should contain not less than 30 per cent of butter-fat.

Second-grade cream may be slightly sour, containing not more than .3 of one per cent of acid, not older than five days, should contain no taints, and should have not less than 30 per cent of fat.

Third-grade cream may be somewhat stale, somewhat tainted, and may contain less than 30 per cent of butter-fat.

When cream is pure and sweet, containing less than .2 per cent of acid, it indicates that the cream has been produced under sanitary conditions and must have been kept cool. Since the lactic acid is developed from the milk-sugar, and since the bacteria do not grow in a cold temperature, it further indicates that there are small numbers of bacteria in the milk.

Cream produced under clean conditions does not sour rapidly, owing to the fact that there is a less number of bacteria in the cream. To detect the above amount of acid a test is used which is known as the alkaline test.

DESCRIPTION OF THE ALKALINE TEST.
The equipment for the alkaline test consists of an alkaline solution, an indicator, and a graduated cylinder or burette, a 50 cubic centimeter pipette with which to measure out the cream, and a cup. The principle consists of the fact that the alkali neutralizes the acid of the cream. Any alkali can be used in making this standard solution, for instance, lime, lye, soda, etc. However, for testing purposes these must be chemically pure, hence if lime is used the solution is added to sour milk and the acid unites with the lime, forming a substance which is neutral, neither alkaline nor acid. The alkalinity of the solution must be known, and hence it is termed a standard solution. If a certain alkali neutralizes a certain acid and this is a constant factor, and the strength of the alkaline solution is known and the point at which both neutralize each other can be determined, the amount of acid in the milk can be calculated. The way to determine the neutralizing point is by means of an indicator which turns pink if the solution is alkaline and turns white or colorless when the solution is acid. This indicator is commonly known as phenolphthalein. The alkali can be bought in bottles from any chemical laboratory and can be shipped to the farmers at a nominal cost and is made by dissolving four grams of sodium hydroxide, to which enough distilled water has been added to make one liter of solution. This makes what is commonly known as a 10th normal solution.

With the apparatus and solution at hand, measure 50 cubic centimeters of cream with a pipette into a beaker or cup, then with the same pipette add 50 cubic centimeters of pure distilled water, then add 5 drops or more of indicator. Fill the burette to the zero mark with alkaline solution, but before doing this be sure and see that the burette is absolutely free from water and acid. Probably the best way is to rinse the burette with a little of the solution. Now add the solution to the cream in a slow manner until you notice that the pink solution appears very reluctant in destroying the pinkish color on stirring. Then this neutralizing solution should be added drop by drop only. The moment the cream remains pink the acid has been neutralized. The number of cubic centimeters added to the cream is read on the burette, and from this the percentage of acid can be calculated in the following manner:

Number of cubic centimeters of alkali multiplied by .009, divided by the number of cubic centimeters of cream, times 100.

Example: If it requires 32 cubic centimeters of alkali to neutralize 50 cubic

WHY YOU SHOULD BUY A DE LAVAL CREAM SEPARATOR

BECAUSE—It will save you at least \$10 to \$15 per cow every year of use over any gravity setting or skimming process, and last you at least twenty years.

BECAUSE—It will save you at least \$5 per cow every year of use over any imitating cream separator, and last you from five to ten times as long.

BECAUSE—In proportion to actual capacity and durability it is not only the best but also the cheapest of cream separators, and saves its cost the first year of use.

BECAUSE—It can be bought either for cash or on such liberal terms that it actually pays for itself.

BECAUSE—Being the first of separators it has always kept far in the lead, being protected by one important patent after another, and its sales are ten times those of all other machines combined.

A new DE LAVAL catalogue explaining these facts and many others in detail is to be had for the asking.

ic centimeters of cream, what per cent of acid is there in the cream?

The formula would be:

$$\frac{32 \times .009}{50} \times 100 = .576, \text{ the per cent of acid in the cream.}$$

CREAM SHOULD NOT HAVE UNDESIRABLE FLAVORS OR ODORS.

The causes that produce undesirable flavors and odors in cream are as follows:

1. Cream produced from abnormal milk which has been drawn from diseased cows.

2. By feeding the cow moldy or partially decayed feeds.

3. By keeping the animal in uncomfortable conditions, which causes her to become feverish or excited.

4. By milking a cow in a filthy stable, or near decomposing material.

5. By allowing cows to wade around in mud puddles or cesspools and then milking the cow without washing the udder.

6. By milking the cow with dirty hands, or by milking on the hand in order to wet the teat. Under all conditions milk the cow with a dry teat. If the teat is chafed or sore use vaseline instead of milk to moisten it.

7. By milking into filthy pails or pails that have not been scalded with hot water. In washing the milking utensils it is advisable to use hot water and some washing powder, and finally rinse with boiling water or steam over a steam jet.

8. By running the milk through an unclean separator. (See bulletin No. 131, Kansas Experiment Station.) The separator should be taken apart and washed ever day. If the separator is used twice a day it is preferable to take it apart and wash it both times, but if time does not permit this, at least five gallons of warm water with some washing powder should be run through it, followed by a gallon of

boiling water without the washing powder.

9. By running cream into a filthy can. Care should be taken that cream should be put into a clean milk-can that has previously been scalded and cooled.

10. By not cooling the cream to a proper temperature. After cream has been separated it should be cooled to at least 60° F., and lower if possible. When putting cream from two milkings together care should be taken that the cream added last is thoroughly cooled.

11. By not properly covering the cream-can with some cloth in the summer when driving long distances to the station.

12. By letting cream set around at stations for a long period of time.

DELIVERY.

Cream should be fresh and should be delivered at least twice a week in winter and three times a week in summer. Cream kept for longer periods of time, unless kept on ice, will produce a rancid flavor when churned into butter. Hence, a man delivering cream must deliver as often as this or his cream will not be first grade.

PER CENT OF FAT.

First-grade cream should contain not less than 30 per cent of butter-fat, for the reason that cream with this per cent of butter-fat will keep better and costs less to transport than cream of a lower per cent of fat, and the dairyman will recover more skim-milk.

Some causes that tend to lower the per cent of butter-fat below 30 per cent in cream separated with a cream-separator are as follows:

The variation in the per cent of butter-fat of hand-separated cream is very great if operators are not careful in operating their machine uniformly. There are several factors that influence the test of cream from separators. The first and probably the most important cause that reduces the per cent of but-

ter-fat in cream is by turning too slowly, not giving the bowl enough speed. Anything that tends to change the speed of the bowl from one separation to another influences the per cent of butter-fat in the cream. A uniform speed of the bowl is obtained by turning the crank at a given speed at all times and giving the crank an equal pressure at all points in its circuit around the axis. The speed at which the machine should be run is indicated by the manufacturer. Follow these instructions and count the revolutions each time the machine is used, to be sure that the speed is maintained.

If milk is warm the cream will be thicker, if cold it will be thinner, other conditions being equal. Milk immediately after it is drawn from the cow has the proper temperature at which to separate.

Milk should be run through a separator at a constant rate. If milk is fed into the separator at an uneven rate, if at times the flow of milk is stopped, the thickness of the cream will be greatly influenced. The faster milk is run through a separator, the thinner will be the cream, other conditions being equal.

The amount of water or skim-milk used to flush out the bowl will naturally tend to decrease the per cent of butter-fat by diluting the cream with water or milk.

There is a cream screw or skim-milk screw in each separator for the purpose of changing the thickness of cream when desired. By this it can be so regulated as to skim thin or thick cream, and when once set, if all other conditions of the separator are uniform, it will produce nearly a constant per cent of butter-fat.

These principles hold true in all cream-separators and explain why the per cent of butter-fat sometimes runs below 30 per cent.

While all the points mentioned herein can be known without depending upon the judgment of any particular individual, as for instance, determining the amount of acid in the cream, the frequency of hauling the cream, per cent of butter-fat in the cream, etc., there remains, however, one point still unsolved which is directly dependent on expert judgment, namely, the flavor of the cream.

A cream may be acid and have a pleasant flavor and odor, and on the contrary a cream may be sweet and have a bad flavor. As yet no test has been found that will determine the flavor absolutely except the taste and smell of man. Hence, while it is a simple and practical problem for all creameries to adopt the schemes as suggested above, in due justice to the producer as well as the creameryman, there should be in as many places as the business would permit, men who are competent and efficient in judging flavor and odor of cream. Such a man in order to give universal satisfaction must have some experience in the judging of cream. He must furthermore have some knowledge of the physical and chemical properties of milk and cream. In short, he should be a man well versed along dairy lines in order to impart information to those who need it, and at the same time stimulate and keep up the progress in dairying.

While this method would be only practicable in localities where dairying is carried on quite extensively, there is, however, a second manner of handling cream, namely, to have each farmer send his cream directly to the creamery. This is a very satisfactory method to the creamerymen and also to the producer if the producer is lo-

cated on a direct shipping point to the creamery, but wherever transfers need to be made, the grading of this cream at the factory would be unjust to the producer since the railroad company is quite often responsible for delaying shipments at transferring station. To overcome this point it is quite necessary in order to raise the standard of butter to operate refrigerator-cars for the purpose of transporting cream long distances, and it is hoped that in the near future dairying will develop to such an extent as to make it profitable to use refrigerator-cars for transporting cream.

CONCLUSION.

The dairy department of the Kansas State Agricultural College inaugurated this scheme of grading cream nearly two years ago. It has given universal satisfaction to the patrons and has produced a marked improvement in the quality of the cream. On account of the practicability of this scheme, and its legitimacy both to the producer and consumer, we feel that every creamer- man and dairyman should indorse and help to promote the idea of grading cream upon its merits.

The Profitable Dairy Cow.

PROF. C. S. PLUMB, OHIO STATE UNIVERSITY.

(Continued from last week.)

CARE AND FEED OF THE DAIRY COW.

Seven years had passed by since young Winslow had returned to the farm. The herd had gone through a remarkable change. The process of selection, culling out, and breeding up the butter yield had increased from 180 to 400 pounds a year. The merits of the herd were becoming known the whole country round and the farmers of the neighborhood really began to take a just pride in the Rockdale herd. In fact, the herd was known far more than locally. Enterprising agricultural journalists had discovered its existence and had advertised it over a wide territory.

One day the neighbor who had purchased the first bull John had placed at the head of the herd, made a call and engaged in conversation. He was a fairly good man, but like many other persons owning stock, gave his herd less careful attention than good business warranted. He not only knew the Winslows laid great emphasis on the importance of correct breeding, but he was well aware that the Rockdale herd was carefully fed and attended to. He recognized the fact that his own cattle looked thinner in flesh, more ill-kept, dirtier, and more starved than that of his now prosperous neighbor.

After passing the customary comments on the weather and crops, John remarked: "Mr. Lee, that bull you purchased of us sired a likely lot of calves for you, didn't he?" "Yes," said Mr. Lee, "he certainly did. The heifers now in milk are better than anything we have ever owned before. Still, it seems to me that our herd is not doing as well as it should, and our cattle are not in the condition that yours are. I have been wondering how much feed and care had to do with this difference. Our barn is fairly warm and comfortable, and yet our cattle do not look thriving." "How about your feeding and growing?" inquired John. "I feed plenty of hay and straw," was the reply, "but I never have felt that we could afford to feed much grain. The cost is too great. We don't use much provender, I know."

"It is sort of curious," remarked the junior member of the Winslow firm, "but I have just been studying over a pamphlet which I received from the Cornell University Experiment Station. You know that there are in the different States agricultural experiment stations that are working in the interest of the farmer, studying problems in soils, fertilizers, feeding stock, etc. Each of these stations publishes several times a year bulletins as they are called, which tell about their experiments. These are free to those who desire them. The professors at the agricultural college used to make students study over some of the more important bulletins, and since I graduated I have been getting bulletins from some of the States whose publications I thought would help me. Now, in this bulletin Professor Wing and Mr. Ford tell of 'An attempt to increase the fat in milk by means of liberal feeding,' which is somewhat in the line our conversation has fallen into. They planned an experiment to find out whether a herd of dairy cows previously kept under adverse conditions could be made more profitable by better feeding and care. So they went out into the country near the station and found a herd of 21 cows with a reputation of being poorly fed

Dairy Talks by the EMPIRE Dairy Maid.

It's to Your Interest

It's to *your* interest to get a cream separator that won't make you more work than it saves.

It's to your interest to get a cream separator that is both easy to turn and easy to clean.

It's to your interest to get a cream separator that does not break down.

It's to your interest to get a cream separator that does not wear out.

It's to your interest to get a separator that will get *all* the cream. Consequently,

It's to your interest first to investigate and then to get an

Improved Frictionless

Empire

Easy Running Cream Separator.

Here is the reason in one word: *Simplicity*.

As one of our customers says:

"It's simply perfect because it's so perfectly simple."

Its small light bowl with few parts, requires little machinery for turning it, and little labor on your part.

Its smooth service and few interior parts make it easy to clean.

Its five compartments make it a close skimmer. The milk is given five separate separations. None of the cream can get away.

Its superior construction—the extra materi-

als and workmanship in it make it extremely durable.

Its few parts make it need few repairs.

Its years of reputation and its standing make you perfectly safe in buying it.

It will make more dollars for you than any other separator. No question about it.

It's to your interest to investigate.

Won't you, then, send your name and get some of the Empire books? They are good reading.

Please tell how many cows you keep and what you do with the milk. Address

EMPIRE CREAM SEPARATOR COMPANY, BLOOMFIELD, N. J.

311 TEMPLE BLOCK, KANSAS CITY, MO.

For postage. Send eight two-cent stamps and tell how many cows you keep and what you do with your milk and we will send you the "Game of EMPIRE Success"—the most amusing, attractive and fascinating game ever invented. Old and young can play. Bushels of fun for all the family. Handsomely lithographed in colors; mounted on heavy binders' board 12x16 inches.

Ask for the one you want—

1. Full catalog and price list.
2. "The EMPIRE Dairy Maid."
3. "The Switching of Hiram, (story.)"
4. "Figger it out for Yourself."
5. "A Gold Mine for Butter Makers."
6. "Dairy Results—Dollars."
7. "Money and the Way to Make It."

A Reward

FOR THE

Man Who Milks

The man who ships his cream direct is rewarded for quality. He stands alone. He doesn't have to bear the burdens and suffer for the mistakes and carelessness of his neighbors. If your cream is clean and not too sour and good flavor, you get the highest grade and the best price. If your facilities for handling your cream are better than your neighbor's and you can keep it longer you need not ship so often. Consequently you economize on time.—"Time is money."

Everything favors the individual shipper.

Our system takes care of him. Our factory is his natural home.

Send us your cream and we'll send you the money.

Respectfully,

BLUE VALLEY CREAMERY CO.,

ST. JOSEPH, MISSOURI.

Peerless Cream Separators

Reasons Why the PEERLESS is the Best

1st—Twice the capacity of any other bowl. That is to say two times smaller than any other bowl of equal capacity.

2d—Compound feature, two bowls in one, hollow bowl, and disk bowl, combining all the features of the tubular and disk machines.

3rd—Enclosed frame. Free from dust injury resulting from machine impossible.

4th—Perfectly noiseless.

5th—Heavy enough and strong enough to lift a box car, which insures durability.

6th—The bushings made of phosphor bronze the most serviceable material for the purpose. Fitted and guaranteed to be accurate to $\frac{1}{16}$ of an inch.

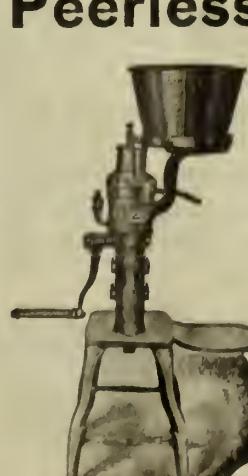

7th—Every journal bushed with brass or phosphor bronze.

This fact together with the fine adjustment described above, accounts for the light draft of the Peerless machine. Each bushing is made in duplicate and interchangeable and if at any time they show wear they can be replaced at small cost.

8th—At normal temperature the skimmed milk will always show less than 5-100 of 1 per cent of butter fat and generally less than 1-100 of 1 per cent butter fat.

PEERLESS CREAM SEPARATORS are guaranteed to anybody—everybody, anywhere—everywhere.

Doctor Brigham Says

MANY PHYSICIANS PRESCRIBE

Lydia E. Pinkham's
Vegetable Compound

The wonderful power of Lydia E. Pinkham's Vegetable Compound over the diseases of womankind is not because it is a stimulant, not because it is a palliative, but simply because it is the most wonderful tonic and reconstructive ever discovered to act directly upon the generative organs, positively curing disease and restoring health and vigor.

Marvelous cures are reported from all parts of the country by women who have been cured, trained nurses who have witnessed cures and physicians who have recognized the virtue of Lydia E. Pinkham's Vegetable Compound, and are fair enough to give credit where it is due.

If physicians dared to be frank and open, hundreds of them would acknowledge that they constantly prescribe Lydia E. Pinkham's Vegetable Compound in severe cases of female ills, as they know by experience it can be relied upon to effect a cure. The following letter proves it.

Dr. S. C. Brigham, of 4 Brigham Park, Fitchburg, Mass., writes:

"It gives me great pleasure to say that I have found Lydia E. Pinkham's Vegetable Compound very efficacious, and often prescribe it in my practice for female difficulties.

"My oldest daughter found it very beneficial for a female trouble some time ago, and my youngest daughter is now taking it for a female weakness, and is surely gaining in health and strength.

"I freely advocate it as a most reliable specific in all diseases to which women are subject, and give it honest endorsement."

Women who are troubled with painful or irregular periods, bloating (or flatulence), weakness of organs, displacements, inflammation or ulceration, can be restored to perfect health and strength by taking Lydia E. Pinkham's Vegetable Compound. If advice is needed write to Mrs. Pinkham, at Lynn, Mass. She is daughter-in-law of Lydia E. Pinkham and for twenty-five years has been advising sick women free of charge. No other living person has had the benefit of a wider experience in treating female ills. She has guided thousands to health. Every suffering woman should ask for and follow her advice if she wants to be strong and well.

Neuralgia
And Other
Pain.

All pain in any disease is nerve pain, the result of a turbulent condition of the nerves.

The stabbing, lacerating, darting, burning, agonizing pain that comes from the prominent nerve branches, or sensory nerves, is neuralgia, and is the "big brother" of all the other pains.

Dr. Miles' Anti-Pain Pills rarely ever fail to relieve these pains by soothing these larger nerves, and restoring their tranquility.

Dr. Miles' Anti-Pain Pills leave no bad after-effects, and are a reliable remedy for every kind of pain, such as headache, backache, stomachache, sciatica, rheumatism and neuralgia.

They also relieve Dizziness, Sleeplessness, Nervousness, Car-Sickness, and Distress after eating.

"For many years I have been a constant sufferer from neuralgia and headache, and have never been able to obtain any relief from various headache powders and capsules, until I tried Dr. Miles' Anti-Pain Pills. They always cure my headache in five minutes time," FRED R. SWINGLEY, Cashier 1st Nat. Bank, Atkinson, Neb.

Dr. Miles' Anti-Pain Pills are sold by your druggist, who will guarantee that the first package will benefit. If it fails he will return your money.

25 doses, 25 cents. Never sold in bulk.

Miles Medical Co., Elkhart, Ind.

that had been on the same farm for some time, that had a large proportion of comparatively young animals, most of which had calved as nearly as possible at the same time. In this herd only four of the cows were more than eight years old, all but one had calved within a period of two consecutive months, and all were real thin in flesh, much as yours are. Like yours, they represented native and mixed breeding. The experiment then begun by the station, ran somewhat like this. A record was kept of the production of the herd in milk and fat for one entire milking period on the farm of the owner, without in any way changing the conditions under which the animals had lived. The man who owned the cows, Mr. Gibson, fed and cared for them just as he had always. The station arranged for him to weigh the daily milk yield and take frequent samples of the milk of each cow, which were once a week tested for their butter-fat composition by a representative of the station. After the first milking period was over the cows were brought to the station and taken to its farm, where they were cared for and fed liberally for two years. A record was kept of all the food they ate, and the milk they produced was weighed daily, and its fat composition measured. While these cows were being studied the other cows left on the Gibson farm were also being studied just as they were the first year. On the fourth period of milking, the 10 cows they brought were taken back to the Gibson farm and again subjected to the same conditions they were under when the experiment began. During the second milking period at the station they fed the cows all the easily digested food they would consume without getting them out of condition, economy of production being not considered. During the third milking period they tried to feed all the coarse fodder each cow would readily eat, and all the grain that could be eaten in addition such as would give return at the pail. I might say here that this third method really represents our policy at Rockdale farm, to feed liberally yet economically. Those cows for coarse fodder were fed red clover, timothy hay, and slage. When the cows were on pasture they also got a grain ration, until the milk yield became very small.

"Now, what was the result of this careful experiment covering four years, bearing as it did on the health and vigor of the herd and its producing capacity? Well, I notice in the first place that the total yield of milk and butter-fat was in nearly every case much increased while the cows were at the experiment station under satisfactory care. Of the 10 cows it is shown that by liberal feeding the yield was increased 46 per cent in milk and 55 per cent in fat. These 10 cows were not the best in the herd of 21. They simply represented a fair average of the herd. Here is a fair sample of the way those cows did, taking Polly for example: The first year she produced 3,143 pounds of milk and 177 pounds of fat; the second year she produced 5,526 pounds of milk and 346 pounds of fat; the third year she produced 4,802 pounds of milk and 283 pounds of fat; the fourth year she produced 2,945 pounds of milk and 184 pounds of fat.

"Some of the other cows show an even greater influence from feed and care than this.

"In regard to the cost of the milk and fat during these different feeding periods, it is interesting to note that the average cost of 100 pounds of milk the first period on the Gibson farm was 53 cents, the fat being 12 cents a pound; the second period, when economy was not considered, it was only 65 cents an 100 pounds for the milk and 14 cents a pound for the fat; while the third period of good feeding the cost was reduced to 45 cents an 100 pounds for the milk and 10 cents a pound for the butter-fat. Another interesting thing in this bulletin that I see is the change in the appearance of the cows due to generous feeding and care.

"It seems to me that this bulletin teaches an important lesson to us dairy-cattle men, for it proves by a four years' actual trial that liberal feeding not only pays in increased production, but it also pays by a more vigorous development of the herd. If the herd is more vigorous, then this vigor is transmitted to the offspring. In my opinion, too many dairy-cattle men fail to see the relationship of ample feed to proper nutrition and continuous herd vitality."

The average man is fair minded, and is willing to be influenced by a rational presentation of facts. The contents of this bulletin as presented by John

to Mr. Lee, made a deep impression on his mind. Said he: "John, that is a good piece of work those agricultural experimenters have done, and I believe enough in the results which they have secured to profit by it myself through better care and more generous feeding of my own herd. I am mighty glad that I happened to drop in on you this rainy day."

There are many things which go to make up success in any one's business and life, but some of them are of more importance than others. John Winslow was a fair representative of many a bright New England lad of parts who are ambitious to be useful and earn a living on a better standard than the commonplace employee. He was fortunate in a father who was willing to aid and assist him in a useful education, and who was willing to put his education to the test.

RESULTS OF GOOD BREEDING.

John Winslow is a young man yet. The herd, which is yet one of partnership, has increased in its productive capacity from 180 to 400 pounds of butter a year. While the cows with heavier yields eat somewhat more food, the degree of profit is far greater in excess of cost of production. In discussing the situation, the subject of this narrative said: "It is not a difficult thing to develop a profitable herd. It goes almost without saying that the average cow is a consumer rather than a producer. My own experience, covering but a comparatively few years and several generations of cow life, demonstrates to my entire satisfaction that the foundation of successful herd-development rests primarily on breeding the proper type. A large degree of my success has been due to breeding consistently and persistently to that purpose. A suitable bull in type and breeding will yield results of no uncertain character if mated to cows approaching the deep-bodied, full-uddered dairy type. I recently read an article by Hark Comstock on improving the dairy cow, in which he expressed some truths that have had much application in the improvement of the Rockdale herd. He says: 'According to the statistics of the Department of Agriculture the average dairy cow of the country gives 130 pounds of butter a year. In the dairy demonstration now in progress on the World's Fair grounds at St. Louis the entire Jersey team of 25 cows has averaged more than that in 60 days. Admitting that better care and better food have to do with the question, there yet remains a very wide margin that can only be credited to the functional capacity of the cows bred in the bone. When farmers began to select their bulls from pure-bred herds possessing these great dairy values, letting the beef question and all side issues take care of themselves, they began to establish improved machinery in the shape of dairy cows. Nearly 12,000,000 cows are devoted to buttermaking in the United States, and the product in round numbers is 1,500,000,000 pounds of butter, worth, at 18 cents a pound, \$270,000,000. Suppose that each of these cows could produce a heifer calf by a high-class Jersey bull, and the improvement in butter capacity for the new generation were even as little as 5 per cent, which would be an exceedingly small estimate, the increased butter output for a single year, assuming that the price was not lowered, would be worth \$13,500,000, a net profit over present income due solely to the use of improved cow-machinery.' This improved cow-machinery referred to by Hark Comstock is due to the patient and intelligent efforts of a comparatively few breeders, who have developed individuals and families of great productive capacity, whereby the mass of breeders may improve their herds. It is due to the work of such men that the improvement of Rockdale herd has been possible in so short a time. To them American stockmen owe a deep debt of gratitude. If our herds are not productive and profitable, it is due to neglecting the opportunities provided through the agricultural college, experiment station, dairy and live stock literature, and the help of intelligent breeders. These all point the way toward success."

In drawing this narrative to a close, it is unnecessary to concern ourselves regarding the identity of the subject of the sketch. He still lives on Rockdale Farm in fair New England, where he continues to work among the herd he loves so well, for his is a labor of love, not of suffering. He has been an unconscious instrument on his part in uplifting the agricultural dignity of his community and State, while he stands as a strong example of what a

A. D. WILLIAMS, Inman, Kans.

man may do to demonstrate the usefulness of the modern agricultural education. You may not know him personally, but as the years go by you may discover his counterpart here and there when perhaps feast expected. If, when in future, you chance upon a strong herd of dairy cows that appears to you much what Rockdale herd is at the completion of this narrative, if you will trace up its history, I am sure you will learn some valuable lessons, even if it does not prove the property of Winslow & Son.

The Poultry Yard

Conducted by Thomas Owen.

Poultry Notes.

The next problem to confront the poultryman is the extermination of mites and lice. It is much easier to prevent these parasites from getting a foothold in the poultry house than it is to get rid of them after they once take possession of the premises. A good preventive is to thoroughly whitewash the house, roosts, and nests with a strong solution of lime and water and crude carbolic acid. The liquid lice-killers are also good for this purpose but more expensive than the whitewash. This matter should be attended to at once before the mites get too solid a hold of the poultry houses, and they should be sprayed at least once a month during the warm weather.

As the weather gets warmer, shade should be provided for the chicks, otherwise they will not thrive. If you have no trees or bushes for shade, then some kind of a shed should be made so that the chicks may get out of the rays of the hot sun. Even the old hens will appreciate a shady place during the hot weather months.

When chicks have wing feathers that drag on the ground, it is a good plan to clip them. Many times it is lice that causes the chicks to drop their wings, and in these cases a little lice powder will be all that is necessary. Sometimes it is caused by indigestion through improper feeding. A partial correction of this trouble is in feeding no corn in any form for a week or ten days, less whole grain, more bread and milk, meat scraps, rolled oats and bran, slightly moistened with milk, and never feeding them as much as they want at any one time, but feed oftener and make them want for more all the time. Then pull the drooping flight feathers out of the wings. Mind you, the flight feathers only, not the secondaries, which are of great assistance in allowing the nourishment necessary to continue the growth of these already overgrown flight feathers, to go to the upbuilding of the impoverished system, and by the time these feathers begin to grow again the vitality of the chick will be much improved and the possibility of its becoming a worthless runt is very much lessened.

When grass is beginning to grow it will be an advantage to use a little salt in the ground feed, but only enough for a seasoning, as too much is detrimental, creating thirst and leading to inflammation. This inflammation is due to the drain of the fluids on the body, and the birds are unable to drink sufficient water to counteract the effects of an overdose of salt.

To have eggs of fine flavor the hens should be fed on clean food. Fowls fed on putrid meat, decayed or decaying animal or vegetable substances, will lay eggs that are not fit to eat. Proof of how the food affects the eggs may be had by feeding a number of hens on onions for a certain period. The eggs will become so strongly tainted with the onion flavor as to be unpalatable. Where the farmer allows his fowls unlimited range, it may be said that it is impossible to control their feed, but under no circumstances should the fowls be allowed access to filthy substances. Even the practice of allowing the hens to scratch in the dunghill, as some of the old school of farmers think is necessary for the production of eggs, is not to be recommended. Where the fowls are kept for the purpose of money-making, they will be found systematically arranged in certain numbers in pens and their actions under control. Good care, clean food, and clean quarters will be found hand in hand. System and intelligence in the management of poultry is as necessary as in any other line of business.

The noblest question in the world is, What good may I do in it? Benjamin Franklin.

POULTRY BREEDERS' DIRECTORY.

LIGHT BRAHMAS

More prizes than any breeder in the state; 10 firsts this season. Eggs, \$1.50. Cockerels, \$2 to \$4.

T. F. Wenner, Blue Mound, Kansas.

GENERAL CONDITIONS.

The temperature rose rapidly during the first days of the week, reaching the maximum on the 23d in the western and central divisions, and on the 24th in the eastern division. On the 23d the temperature in the northern

RAINFALL FOR WEEK ENDING APRIL 28, 1906.

SCALE IN
INCHES:

half of the western and middle divisions reached 90° and over; the highest being 94° at Coiby and Farnsworth. The minimum temperatures occurred in the western division on Friday or Saturday but in the middle and eastern divisions the minimum temperatures generally occurred on Sunday. On the 27th and 28th the temperature fell below 40° in the southern and western counties of the western division; the lowest temperature, 33°, occurring at Coolidge. The precipitation generally occurred on the night of the 26-27th and on the 27th. It was above normal in the northwestern and northern counties; it was also above normal in Lane and Reno Counties and in Chace, Lyon, Osage, Douglas, and Johnson Counties. The precipitation was quite light in the southern counties, several of which report no rain. Hailstorms occurred in the middle and eastern divisions on the 27th, some of them being severe enough to damage windows and gardens.

RESULTS IN DETAIL.

EASTERN DIVISION.

Allen.—The week was warm with abundant sunshine. The mean of the maximum temperatures was 80°. There were high southerly winds on the 24th and 27th. Thunderstorms occurred on the 26th and 27th. A trace of hail fell in the storm of the 26th, but in that of the 27th considerable hail of large size fell and damaged fruit-trees and crops a few miles southwest of Iola. Many of the hail stones measured one and a fourth inches across; near the western part of the county the hail is reported to have fallen to the depth of one inch.

Anderson.—High winds blew the first part of the week. Summer temperatures and clear weather prevailed the first of the week, but it was cooler and partly cloudy the latter part.

Atchison.—The first five days of the week were cloudless. Friday afternoon heavy rain, accompanied by very large hailstones, fell. In two hours, .83 of an inch of rain had fallen. A high wind blew on the 24th.

Brown.—There were five clear days during the week. The highest temperature was 87° on the 24th and the lowest was 43° on the 22d. Rain, accompanied by hail, fell. This was the first rain since the 12th.

Chase.—Clear weather prevailed every day except the 27th, when .90 of an inch of rain fell. There were very high winds on the 23d and 24th.

Chautauqua.—It was clear every day except the 27th, and there was no rain although it is beginning to be needed. Seasonable temperatures were experienced.

Cherokee.—The first of the week was clear but on the 26th rain and quite heavy fell.

curred, followed by clearing and cooler weather.

MIDDLE DIVISION.

Barber.—This has been a dry week with fairly warm weather and several windy days. On the 27th it turned cooler with a north wind.

Barton.—The week was very windy. There were high winds on the 23d, a dust storm on the 24th, and a thunderstorm on the 26th. There were two days clear and five partly cloudy. The maximum temperature was 90° on the 23d; .41 of an inch of rain fell on the 26th.

Butler.—The highest temperature was 86° on the 24th, and the lowest was 45° on the 28th. There was a light shower on the 27th.

Clay.—It was very windy on the 23d, 24th, and the morning of the 25th. The week was mostly cloudy. It was warm the fore part of the week, but it rained on the 27th and was cooler till the week ended.

Cloud.—The temperature ranged from 2° to 16° above the normal on all days but the 25th, when it was lightly below normal. There was a sprinkle of rain on the 24th, and some good showers on the 26th and 27th. It was clear the first day but from that time the cloudiness gradually increased.

Dickinson.—There were high winds on the 24th and 25th, and a fine rain of .70 of an inch on the 26th.

Ellis.—The atmosphere was hazy and smoky on the 22d and 23d. On the 24th there were high winds and a dust storm. The 25th was a clear day. Scattered thunderstorms occurred on the 26th. The 27th was showery and cooler with northwest winds. It cleared up on the 28th, but continued cool. The maximum temperature was 93° on the 23d.

Elliott.—The maximum temperatures ranged in the eighties and nineties till the last two days, when cooler weather was felt. There was .75 of an inch of rain on the 26th with a thunderstorm.

Jewell.—There were four days of high winds and three thunderstorms. It was generally warm and sunny up to the 26th, when 1.98 inches of rain fell.

Kingman.—Clear weather with maximum temperatures in the eighties prevailed every day up till the 25th, when it became a little cooler. A minimum temperature of 42° was observed the morning of the 25th! There was some hail on the night of the 26th.

McPherson.—Rain and heavy hail which cut down some fruit occurred on the 26th. It was cool the last of the week but there was no frost.

Ottawa.—The weather was windy and very drying the first of the week. It was cooler

with plenty of rain the last of the week. The highest temperature was 90° on the 23d.

Pawnee.—The weather was warm with strong southerly winds the first of the week. On the 26th it rained and the next day northwesterly winds made it much cooler.

Pratt.—Warm weather and high winds prevailed the first of the week, but it was cooler the last two days with a light shower and a thunderstorm on the 27th. The highest temperature was 89° on the 23d, and the lowest was 44° on the 28th.

Reno.—Clear, sunny weather with high temperature was experienced till the 26th, when increasing cloudiness began, followed by a rain of 1.45 inches the 27th and cooler weather. There was a little hail the night of the 26th and 27th.

Republic.—The fore part of the week was clear and warm with high winds. On the 26th and 27th showers fell with thunder and hail on the 27th. Some very threatening clouds were seen on the 27th and some damage from wind was reported.

Russell.—The temperature was considerably above normal the first of the week with a maximum temperature of 93° on the 24th. It rained on the 26th and 27th, and this was followed by cooler weather.

Saline.—The temperature reached 93° on the 24th, but it gradually became cooler from that date. On the 27th there was a severe thunderstorm and some hail. .74 of an inch of rain fell on that date.

Sedgwick.—It was a warm week. The temperature averaged 6° above the normal. There were five clear days and two partly cloudy ones. Traces of rain fell on the 24th and 27th.

Stafford.—The maximum temperature ranged in the eighties on five days. There was a good rain on the 27th. The temperature fell to 43° the morning of the 28th.

Grain in Kansas City.

Receipts of wheat in Kansas City today were 56 cars; Saturday's inspections were 45 cars. Offerings were fair and the demand was poor. The mills were practically out of the market. Prices were unchanged to 1c lower, and lowest at the close. A number of cars remained unsold. The sales were: No. 2 hard, 2 cars 79c, 5 cars 78c, nominally 77@80c; No. 3 hard, 1 car 76c, 2 cars 75c, 1 car 74½c; No. 4 hard, 1 car 72c, 1 car 71c; rejected hard, 1 car 62c; No. 2 red, nominally 88@90c; No. 3 red, nominally 85@88c; No. 4 red, nominally 70@84c.

Receipts of corn were 129 cars; Saturday's inspections were 66 cars. Offerings were the largest in some time past. The demand was fair. Prices were ½@¾c lower, as follows: No. 2 white, 8 cars 47c, 7 cars 46½c; No. 3 white, 4 cars 46½c; No. 2 mixed, 20 cars 47c, 6 cars 46½c; No. 3 mixed, 4 cars 46½c; No. 2 yellow, 9 cars 47c, 4 cars 46½c; No. 3 yellow, 3 cars 47c.

Receipts of oats were 5 cars; Saturday's inspections were 8 cars. Prices were about the same as Saturday, as follows: No. 2 white, nominally 33@33½c; No. 3 white, 1 car 33c, 1 car 32c, 1 car colored 31½c; No. 2 mixed, nominally 32@31½c; No. 3 mixed, nominally 31@31½c.

Barley was quoted 42@44c; rye, 55@57c; Kafir-corn, 80@85c per cwt.; bran, 35c@\$1; shorts, 98c@\$1.01 per cwt.; corn-chop, 92@94c per cwt.

Kansas City Live-Stock Market.

Stock Yards, Kansas City, Mo., April 30, 1906.

A decided upturn in the cattle market was the feature last week. Few cattle came in after Wednesday, but such as did come got an advance of 20@30c over Monday's prices. This strong market had the effect of drawing in a big supply to-day, 11,000 head here, and liberal elsewhere, but the market is holding up steady to-day. The scarcity of highly finished beef steers is more accentuated every week, steers is more accentuated every week, the best here last week selling at \$5.55, 20c less than the top the previous week, although the market was higher last week. Top prices to-day are \$5.35 for steers, sorted heifers and yearling \$5.25, feeders \$5. A train of Nevada hay-fed steers, fed for San Francisco market, but turned this way on account of the earthquake, sold to the packers here to-day at \$4.20@4.65.

The month of April shows more cattle received here than ever before in April, 157,300, as compared with 125,000 last April, and 133,500 largest previous April, in 1903. The increase from native territory is even greater than the figures indicate: last year we received 8,000 cattle from Southern Texas in April, while this year in April only a few have come from that source. The supply has dwindled in the last two weeks, and big runs on Monday and Tuesday is followed by small supply and strong prices later in the week; it may be that way this week. Bulk of steers sell at \$4.65@5.30, heifers \$4.25@5, cows \$3.25@4.50, canners and stock cows and heifers \$2.25@3.40, bulls \$3@4.25, calves \$3@6, stockers \$3.35@4.60, feeders \$4@4.90.

Hog run last week was 52,000 head, supply to-day 10,000, market 5@10c lower to-day, top \$6.42½, bulk of sales \$6.25@6.40, light weights up to \$6.32½, pigs \$5.25@6. The market was lower the middle of last week, but best hogs sold at \$6.50 Saturday, and it looks like receipts of around 50,000 hogs per week can be handled at the high level now ruling. Supply for April shows a gain of 40,000 head over last April, and prices have averaged \$1 higher, which indicates the strength of the demand.

Lambs gained 25@40c last week, as the end of the fed lamb season is in sight. Best lambs sold at \$7.20 to-day, and more than fifty doubles of wooled lambs brought \$7 or better since middle of last week. Sheep prices were not fully tested, but gained 15@25c last week, wooled yearlings quotable at \$6@6.30, wethers up to \$6.15, ewes \$6, clipped wethers and yearlings \$4.75@5.50, lambs \$5.75@5.95, ewes \$4.50@5. Run to-day 5,000, market strong to 10c higher.

J. A. RICKART.

South St. Joseph Live-Stock Market.

South St. Joseph, Mo., April 30, 1906.

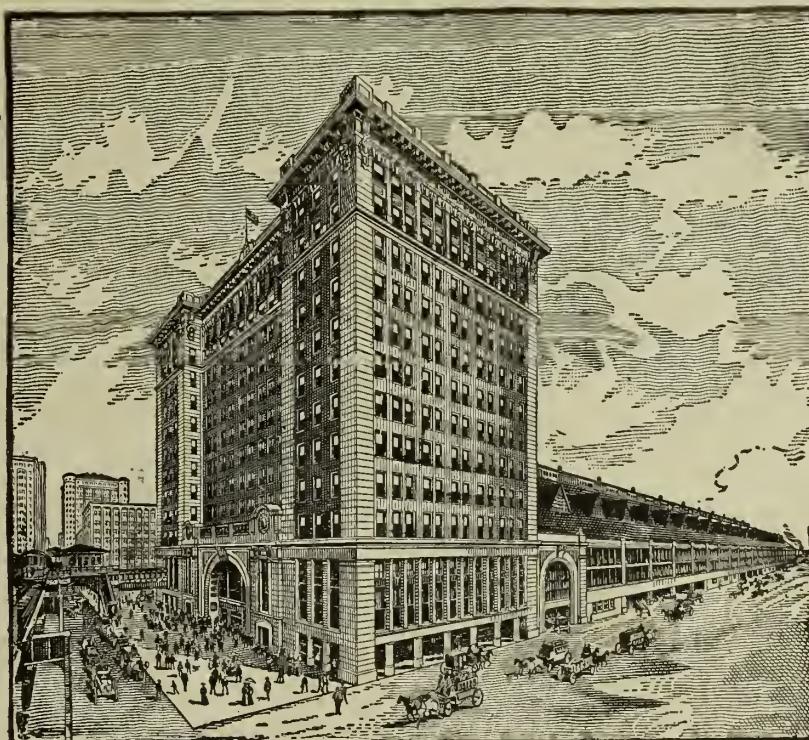

As was anticipated at the close of last week, there was a marked increase in the number of cattle being forwarded for the opening trade of this week, locally the supply was nearly double that of a week ago, while five leading markets showed an increase of around 11,000. In the face of the fact that the Chicago market was 10@15c lower, the local trade ruled fully steady on good demand for everything in the beef-cattle line. The quality of steers was not better than ordinary to medium, there

La Salle
Street
Station,
Chicago

Only one
on the
Elevated
Loop

Used by Rock Island-Frisco Lines

Have YOU ever been in CHICAGO?

If so, you know the extremely convenient location of La Salle Street Station.

If you are a stranger in the city, however, it is of great importance that you learn about this magnificent and comparatively new terminal, used jointly by Rock Island-Frisco Lines—C. R. I. & P. Ry. and C. & E. I. R. R. It is nearest the heart of the city—closely adjoining the business section—with easy walking distance of State Street shopping center and all the principal hotels.

Another advantage of entering the city through La Salle Street Station is the second-story viaduct directly connecting the main waiting-room with the Elevated Railroad loop—you can reach the North, Northwest, West or South sides of the city by elevated trains for a five cent fare without descending to the street. You thus avoid the dangers and delays of the great, crowded city.

The Rock Island right-of-way into Chicago is elevated for more than eight miles out through the suburbs. Prompt arrival at Chicago terminal is thus assured. Englewood Union Station, seven miles out, affords ready access to southern suburbs—all through trains stop there.

Where you will land is an item to consider.

JOHN SEBASTIAN, Passenger Traffic Manager, Rock Island-Frisco Lines, CHICAGO and ST. LOUIS.

heing absolutely nothing on choice weighty order here, the best being just a fairly fatted bunch of 1,300-pound steers on coarse and uneven order that sold at \$5.15. The bulk of steers were light to medium weights that sold between \$4.60@5 with common light killers going at \$4@4.50. Supplies of butcher stock was meager and the demand good enough to hold prices fully steady in the common helper line. The best helpers sold at \$4@4.25. The stocker and feeder trade was quiet on light supply, the local dealers not showing desire for big receipts. The outlook of the trade seems favorable should supplies not be forced up to big figures.

Hog supplies were fairly liberal in the total at five markets, but they were largely bunched into Chicago, forcing a break of 10@15c on that market, which was immediately reflected on trade at the river. Opening sales at the market were around 5c lower than the close last week, but there was further weakening as the day advanced and the bulk of sales showed 5@10c decline, top hogs sold at \$6.45 and the bulk at \$6.30@6.35. The market was quite active at the decline. The outlook seems to favor gradually weakening prices unless the country should curtail receipts, as packers have got them started down now and will no doubt continue to play their cards for a lower level.

The sheep market continues in good condition with prices on an upward trend, tops here to-day sold 25c higher for lambs than last week, but some of this was due to excellence of quality and the market in reality could not be quoted over 10@15c higher for lambs, while sheep were strong to 10c higher,

WALNUT GROVE FARM ...FOR SALE...

Upon the advice of several specialists I am going to New Mexico for my health. On this account I must dispose of all my Kansas property, including the famous Walnut Grove farm, the most complete and profitable stock farm in Kansas. This includes 130 acres of the best land in Kansas, two miles from Emporia. Over 200 good O. I. C. hogs. All our Barred Plymouth Rocks, 36 Collies, 44 head of cows, 8 head of horses, the best farm house in the State. Also one small farm house, 2 large barns, 2 large cattle-sheds, one 300-foot hen house, one 250-foot brooder house, 20 brooder houses, capacity of plant, 4,000. The best hog house in the West, double-deck cement floors; many small hog houses. This is not an experiment, but a successful stock farm. Price, \$20,000 cash.

H. D. NUTTING, Emporia, Kans.

top lambs sold at \$7.25, clipped lots at \$5.90, with prime woolled wethers at \$5.85.

Cure Your Horse and Work Him Too.

After a winter of inactivity, the horse is jammed into heavy spring work with the consequence that he acquires a collection of saddle gallis, colic, gall, or sore shoulders.

Without interfering with the work or laying the horse up for repairs, he can be cured by the use of Bickmore's Gall Cure while he works. This is an old guaranteed remedy that has been on the market for years and is useful for chaps, bruises, speed crack, wrie cuts, or cracked cows' teats. A sample

of this unequalled remedy can be had for 10 cents (to pay the postage) by addressing the Bickmore Gall Cure Company, Old Town, Me. An illustrated book is sent free with the sample.

Every Tuesday, balneum of the year, the Chicago Great Western Railway will sell homeseekers' tickets to Minnesota, North Dakota, and Canadian Northwest at about half rate; to other territory first and third Tuesdays. Write G. W. Lincoln, G. P. A., 7 West 9th St., Kansas City, Mo. State number in party and when going.

When writing our advertisers please mention this paper.

Mail Steamers from San Francisco to New Zealand Every Three Weeks.

FIFTY farms in Southern Kansas, from \$15 to \$70 per acre; can suit you in grain, stock, or fruit farms. I have farms in Oklahoma, Missouri, and Arkansas for sale or exchange. If you want city property, I have it. Write me. I can fix you out. Wm. Green, P. O. Box 966, Wichita, Kans.

LAND FOR SALE
in western part of the great wheat State. H. V. Gilbert, Wallace, Kans.

FINE STOCK FARM FOR SALE—640 acres one-half in cultivation, balance in pasture, mostly seeded to Kentucky blue-grass, well watered, about 40 acres in alfalfa, all fenced and cross-fenced, beautiful lawn with shade, large eight-room house, commodious barns for stock and hay, fuel, poultry, and ice houses and other outbuildings, feed yards, corrals, stock sheds, one tenant house; convenient to church and school, on Rural route, 1½ miles from station on double track railway, 12 miles east of Topeka, the State capital, 34 miles west of Kansas City, in the midst of a splendid farming country. It is now occupied by the owner, who has lived there for more than thirty years. Price \$37.50 per acre. Easy terms. Address WILSON & NEISWANGER, 116 W. 6th St., Topeka, Kans.

160 ACRES—ALL BROKEN—A good wheat farm, 100 acres in wheat, ½ of which goes with place; balance to be put in spring crop. Price, \$3,300.

640 ACRES—ALL FENCED—5 miles from town; 100 acres in cultivation, balance in pasture. Price \$12.50 per acre if sold soon.

KRAMER & GOLD, Plainville, Kansas.

FOR SALE—A good farm of 320 acres in Anderson County, Kansas, main line Missouri Pacific Railway, R. F. D., near to school and church. American community, good improvements; \$22 per acre. A bargain. Address O. J. Prentice, 156 Wabash Ave., Chicago.

FOR SALE OR TRADE—A 20-room rooming-house, splendid location, good condition, built about six years, in Pittsburg, Kans., one of the best cities in the West; excellent school facilities, city high school, State manual training normal. Property belongs to us individually, not real estate men. We want to sell or trade for clear land in Kansas. Price \$4,000; incumbrance, \$1,200. BOX 66, PITTSBURG, KANS.

Stray List

Week Ending May 3.

Greenwood County—W. H. Bonnett, Clerk.

Portland Cement Concrete has become the recognized building material where strength, durability and sanitary conditions are demanded. Our new book

"Concrete Construction About the Home and on the Farm,"

has just been received from the printers. It contains photographs, descriptions, specifications and sectional drawings for many of the smaller structures that can be built without the aid of skilled labor by the suburbanite or farmer; also much general information and many valuable hints to small contractors.

A copy of this book will be sent free upon request

MASTICATOR
THIS \$850. PIG EATS
3 FEEDS FOR ONE CENT

DID YOU EVER SELL A 7 MONTHS OLD PIG FOR \$850.? AND ONE LITTER FOR \$1,657.50?

W. G. CAMFIELD & SON, Breeders of Pure Bred POLAND CHINA HOGS.

INTERNATIONAL STOCK FOOD CO., MINNEAPOLIS, MINN.

GENTLEMEN:—I want to tell you about a fine litter of pigs that I raised last year. As I had a good litter of pigs out of E. L. Delightful I wanted them to do extra well, so I bought one hundred pounds of "International Stock Food" and fed it to them every day up to sale time when they were seven months old. From this litter came Masticator, the highest priced pig that was ever sold at auction at that age. The Goodrich Stock Farm at Eldon, Mo., paid \$850.00 cash for this seven months old pig, which broke all sale records for this age. The entire litter brought \$1657.50. I will certainly continue to feed "International Stock Food" because it is reliable and makes us money. I will soon want another supply.

Yours truly,

W. G. CAMFIELD & SON, Poland China Breeders.

COWDEN, ILLINOIS, JAN. 16, 1906.

Yours truly,

W. G. CAMFIELD & SON, Poland China Breeders.

YOUR SOWS WILL RAISE MORE PIGS.

INTERNATIONAL STOCK FOOD CO., MINNEAPOLIS, MINN.

GENTLEMEN:—I have seven Brood Sows that pigged last week, all in four days, sixty-four fine big pigs. Have fed these sows "International Stock Food" every day. Also fed it to sixty head of steers which are doing well. One of my neighbor's hogs had the cholera the first of the year. There was only a wire fence between his hogs and mine. I fed my hogs "International Stock Food" every day. He lost all his hogs except three out of fifty. I am about ready to purchase another hundred pounds of "International Stock Food" as I feed it every day.

Yours truly,

W. B. ELLIOTT.

LIBERTY, MISSOURI.

INCREASES RICHNESS OF MILK AND SAVES FEED.

INTERNATIONAL STOCK FOOD COMPANY, MINNEAPOLIS, MINN.

GENTLEMEN:—Your "International Stock Food" is the best I ever fed to horses, and I am sure it saved me half of my feed last summer and still my horses were never in a better shape for work than they were last summer and fall. I fed them half the amount of oats I formerly did, and two tablespoons of your "International Stock Food" every meal and the results were very satisfactory to me. Before I began feeding "International Stock Food" to my cows the milk tested 3.7. After the first month of feeding your Food it went up to 3.8-3.9-4.0 and now it is 4.1. Now, it is to be remembered that I do not feed them but a small amount of bran and mix the Stock Food with it, so it pays every time to use "International Stock Food." I am,

Yours truly, VICTOR ELFSTRUM.

"International Stock Food" is prepared from pure, medicinal Roots, Herbs, Seeds and Barks and is fed in small amounts as an addition to the regular grain feed. It Purifies the Blood, Cures and Prevents Disease, Tones up and Permanently Strengthens the Entire System and greatly Aids Digestion and Assimilation so that each animal obtains more nutrition from all grain eaten. It is absolutely harmless for any use or even if taken into the human system. Sold by over One Hundred and Twenty-five Thousand Dealers on a "Spot Cash Guarantee" to give you paying results or your money promptly refunded. We do not compete with cheap and inferior preparations. We guarantee high class medicinal quality and over Two Million Farmers and Stockmen strongly endorse its use because it makes them extra money. Paying results for the feeder is the cause of the extraordinary sale of "International Stock Food" throughout the entire world. WE HAVE THOUSANDS OF SIMILAR UNSOLICITED TESTIMONIALS ON FILE IN OUR OFFICE. TEST IT FOR YOUR PIGS, SHOATS, HOGS, CATTLE, COWS, CALVES, HORSES, MARES, COLTS, SHEEP, LAMBS OR OTHER STOCK ENTIRELY AT OUR RISK. COULD YOU ASK ANY FAIRER OFFER?

PLANT-BREEDING.

The importance of plant-breeding is signalized by the appearance of the fourth edition of a book of nearly five hundred pages from the standard publishing house of The MacMillan Company, New York. "Plant-Breeding" consists of a series of lectures by Prof. L. H. Bailey, of Cornell University. In studying these lectures one becomes impressed with the idea that plant-breeding is only at the beginning, both as a science and an art. The great work is yet to be done. The opportunities are open for the ambitious to enter an almost unexplored field. There are some things fairly well settled, however, and these have been formulated in plain language by Professor Bailey. The most salient practical points are stated in fifteen "Cautions and suggestions." The fifth one of these is here reproduced as an example:

"5. When selecting seeds, remember that the character of the whole plant is more important than the character of any one branch or part of the plant; and the more uniform the plant is in all its parts, the greater is the likelihood that it will transmit its characters. If one is striving for larger flowers, for instance, he will secure better results if he choose seeds from plants which bear large flowers throughout, than he will if he choose them from some one large-flowering branch on a plant which bears indifferent flowers on the remaining branches, even though this given branch produce much larger flowers than those borne on the large-flowered plant. Small potatoes from productive hills give a better product than large potatoes from unproductive hills. The practice of selecting large ears from a bin of corn, or large melons from the grocer's wagon, is much less efficient in producing large products the following season than the practice of going into the fields and selecting the most uniformly large-fruited parents would be. A very poor plant may occasionally produce one or two very superior fruits, but the seeds are more likely to perpetuate the characters of the plant than of the fruits.

"The following experiences detailed by Henri L. de Vilmorin illustrate my proposition admirably: 'I tried an experiment with seeds of Chrysanthemum carinatum gathered on double, single, and semi-double heads, all growing on one plant, and found no difference whatever in the proportion of single and double-flowered plants. In striped verbenas, an unequal distribution of the color is often noticed; some heads are pure white, some of a self color, and most are marked with colored stripes on white ground. I had seeds taken severally from all and tested alongside one another. The result was the same. All the seeds from one plant, whatever the color of the flower that bore them, gave the same proportion of plain and variegated flowers.'

"The second part of my proposition is equally as important as the first—the fact that a plant which is uniform in all its branches or parts is more likely to transmit its general features than one which varies within itself. It is well known that bean plants often produce beans with various styles of markings on the same plant or even in the same pod, yet these variations rarely ever perpetuate themselves. The same remark may be applied to variations in peas. These illustrations only add emphasis to the fact that intending plant-breeders should give greater heed than they usually do to the entire plant, rather than confine their atten-

tion to the particular part or organ which they desire to improve.

"At first thought, it may look as if these facts are directly opposed to the proposition which I emphasized in my first lecture, that every branch of a plant is a potential autonomy, but it is really a confirmation of it. The variation itself shows that the branch is measurably independent, but it is not until the conditions or causes of the variation are powerful enough to affect the entire plant that they are sufficiently impressed upon the organization of the plant to make their effects hereditary.

"There is an apparent exception to the law that the character of the entire plant is more important than any one organ or part of it, in the case of the seeds themselves. That is, better results usually follow the sowing of large and heavy seeds than of small or unselected seeds from the same plant. This, however, does not affect the main proposition, for the seed is in a measure independent of the plant-body, and is not so directly influenced by environment as the other organs are. And, again, the seed receives a part of its elements from a second or male parent. The good results which follow the use of large seeds are, chiefly, greater uniformity of crop, increased vigor, often a gain in earliness and sometimes in bulk, and generally a greater capacity for the production of seeds. These results are probably associated less with any innate heritable tendencies than with the mere vegetative strength and uniformness of the large seeds. The large seeds usually germinate more quickly than the small ones, provided both are equally mature, and they push the plantlet on more vigorously. This initial gain, coming at the most critical time in the life of the new individual, is no doubt responsible for very much of the result which follows. The uniformity of crop is the most important advantage which comes of the use of large seeds, and this is obviously the result of the elimination of all seeds of varying degrees of maturity, of incomplete growth and formation, and of low vitality.

"Another important consideration touching the selection of seeds is the fact that very immature seeds give a feeble but precocious progeny. This has long been observed by gardeners, but Sturtevant, Arthur, and Goff have recently made a critical examination of the subject. It is not the slightly unripe seeds that give a noticeable increase in earliness,' according to Arthur, 'but very unripe seeds, gathered from fruit [tomatoes] scarcely of full size and still very green. Such seeds do not weigh more than two-thirds as much as those fully ripe. They germinate readily, but the plantlets lack constitutional vigor and are more easily affected by retarding or harmful influences. If they can be brought through the early period of growth and become well established, and the foliage or fruit is not attacked by rots or blights, the grower will usually be rewarded by an earlier and more abundant crop of slightly smaller and less firm fruit. These characters will be more strongly emphasized in subsequent years by continuous seed-propagation.' Goff remarks that the increase in earliness in tomatoes, following the use of markedly immature seeds, 'is accompanied by a marked decrease in the vigor of the plant, and in the size, firmness, and keeping quality of the fruit.' These results are probably closely associated with the chemical constitution and content of the immature seeds. The organic compounds have probably not yet reached a state of stability, and

they therefore respond quickly to external stimuli when placed in conditions suitable to germination; and there is little food for the nourishment of the plantlet. The consequent weakness of the plantlet results in a loss of vegetative vigor, which is earliness."

It will be well for every farmer, especially every farmer who desires to be up with the times on matters concerning the selection and breeding of plants, to secure a copy of Professor Bailey's book. The price is \$1.25. It may be ordered through THE KANSAS FARMER.

POISON THE CUT-WORMS.

The season of the festive cut-worm is rapidly approaching, if not already present, with some of the readers of THE KANSAS FARMER. The Oklahoma Experiment Station directs to poison him as well as his company, the frisky grasshopper. This is the way to do it:

"Cut-worms and grasshoppers can be destroyed with poisoned bran, by placing the same in small piles on the infected areas, in the afternoon or evening. These insects not only prefer the bran to vegetation, but are attracted for some distance to it.

"The mash is made as follows: Bran 50 pounds; Paris green 1 pound.

"Thoroughly mix dry.

"Moisten the above mixture with sweetened water (this may be sweetened with two quarts of cheap molasses) and stir to a moist mash, but do not make it sloppy.

"The mash should be used fresh and not put out when sour.

"For cut-worms, the piles should be placed from two to three feet apart each way. For grasshoppers, the piles may be more widely scattered. Usually, it is necessary only to put the poison around the edges, or along one side of the field.

"Do not allow the stock or fowls to get the mash on account of the contained poison."

VACATION OF PROPERTY.

EDITOR KANSAS FARMER:—Please answer this for me, and as there are many such cases, the information would be welcome to many.

A sells his farm to B who lives in another State. A gives B contract for deed, reserving use of the land and possession until March 1 next. B is to pay for the place in full on January 1, 1907. Does A have to stay on the place until March 1 in order to hold the insurance valid and to take care of the place? A, having bought another place, finds it more convenient to move in the fall or at latest January 1. The contract does not say anything about insurance or staying on the place. A only reserved right to retain possession until March 1. B finds it inconvenient to take possession until March 1. XXX.

Marion County.

To construe a contract from an abstract statement is rather uncertain business.

Insurance companies are loth to take or to retain risks on unoccupied property. They will usually cancel insurance on the vacation of the buildings. Sometimes it is possible to have someone else occupy the property, and thus keep the insurance good.

The fact that A retained the right of possession until March 1 carries with it a probable reciprocal obligation to care for the property until that date, or until such time as the new owner can provide otherwise for its care. It is doubtful whether under the above statement of the contract A can be legally compelled to retain posses-

sion for the full time of his right of possession, but the Golden Rule, which is the best law ever written, would probably require A to see that the property shall be properly protected during the period contemplated in the contract.

DENATURED ALCOHOL BILL.

The free alcohol bill which passed the House of Representatives by the overwhelming majority of 224 to 7 and which has the unqualified endorsement of the President is now in a critical condition in the Senate. Senator Nelson W. Aldrich, of Rhode Island, chairman of the finance committee of the Senate, which has the bill in charge, has been driven to declare his position. Though there is no limit to this session of Congress except what it chooses to set, he says it is too late for any action by the Senate "based upon wise principles," and he finds it "necessary" to have extensive hearings on the bill on account of the "faulty work done in the House."

No person of intelligence can misunderstand the meaning of this position. The House bill is brief and a model of simplicity and directness. It has a single purpose and it provides for this with certainty. Everybody understands this and knows what it is for, and Senator Aldrich's attitude about "wise principles," "necessary hearings," and "faulty work in the House" means simply that he intends if possible to prevent action at this session.

Why is the Senator opposed to this bill? He is the father-in-law of John D. Rockefeller Jr., and joint grandpa with the elder, of the famous Rockefeller baby, and it is freely hinted around Washington that his personal interests make antagonism to free alcohol a prime necessity. There is no question that he will oppose to the last with all his might any consideration or action of this measure.

The issue is clear cut. There is no mistaking the situation. The question at issue is the liquid-fuel supply of this great country. The American farmer and the Standard Oil monopoly are face to face. The victory must be for one or the other. There can be no compromise.

Senator Nelson W. Aldrich with all the power of the Standard Oil behind him calmly ignores the well nigh universal public demand for immediate action and is determined to defeat the bill.

Farmers, there is only one thing to do. This great measure which means so much to you will be defeated unless you act at once—immediately. You can not reach Aldrich directly, but you can reach the Senators of your own State. Write to them at once, demanding a public statement of where they stand on this question, and demanding that they either compel action in the finance committee or take it out of committee and act upon it in committee of the whole.

There is no middle ground. Your Senators are with you in this matter or they are with the Standard Oil monopoly, and you must know at once which.

The free-seed graft by which members of Congress seek to buy the favorable consideration of certain of their farmer constituents by sending them at Government expense small consignments of common seeds amounts in the aggregate to an enormous raid on the Treasury. It is demoralizing, both to Congressmen and electors. It is a perversion of the useful original purpose of aiding in the introduction and distribution of new

varieties of cultivated plants. How any honorable man can support its continuance is hard to understand.

The reports indicate progress in consideration of the Interstate Commerce bill in the United States Senate. The bill would be passed readily if it could be brought to a vote, for few Senators would dare to go on record against a measure so universally demanded. But the opponents of that bill, using their power of delay under the rules of the Senate, are endeavoring to force concessions. Senator Long, of Kansas, is prominent among those who favor an effective and just measure.

The question of late potatoes has been settled to his own satisfaction by Friend W. H. Hinshaw, of Lyon County, who showed in THE KANSAS FARMER office last Friday some beautiful specimens of the Sir Walter Raleigh variety. They were firm and sound, and had shown no inclination to sprout. Friend Hinshaw plants them about May 20. They continue to grow until the vines are killed by frost, and may be dug at any time before the ground freezes too hard. They never acquire an earthy taste. The quality is first-class.

The report, just made, on the Standard Oil monopoly and its relations to transportation companies is apparently an able showing of information, carefully and efficiently gathered. Commissioner Garfield has in this investigation done much to overcome the bad impression which resulted from the bad blunders committed in the matter of the meat-trust investigations.

The coal-miners' strike in the Pennsylvania region promises to end quickly. The settlement is for three years on the basis of the recommendations made by the Roosevelt commissioners, on which the former strike was ended. Much suffering, much disorder, and much inconvenience to the public have been averted.

Special attention is directed to the article on "The Production and Care of Pure Milk," by Prof. Oscar Erf, of the dairy husbandry department of the Kansas Agricultural College. This is a timely article upon an important subject and is handled by a man of very wide experience.

Miscellany

Kansas Politics.

The great parties have held their State conventions in Kansas, and have named their candidates and declared their principles. The Democratic Convention was held first. Its nominations were published in last week's KANSAS FARMER. They are printed again in connection with the platform upon which they stand, so that both candidates and platform may be compared with those of the Republicans.

THE REPUBLICAN NOMINEES.

Governor—E. W. Hoch, Marion County.

Lieutenant Governor—W. J. Fitzgerald, Ford County.

Secretary of State—C. E. Denton, Harper County.

State Auditor—J. M. Nation, Neosho County.

Superintendent of Public Instruction—E. T. Fairchild, Ellsworth County.

Attorney General—Fred T. Jackson, Greenwood County.

State Treasurer—Mark Tully, Montgomery County.

State Superintendent of Insurance—Chas. Barnes, Osage County.

State Printer—T. A. McNeal, Shawnee County.

Railroad Commissioners—C. A. Ryker, Reno County; Geo. W. Kanavel, Harvey County; Frank Ryan, Leavenworth County.

Justices of the Supreme Court (for six-year term)—W. A. Johnston, Ottawa County; R. A. Burch, Saline County. (For four-year term)—Sils Porter, Wyandotte County; C. B. Graves, Lyon County.

THE REPUBLICAN PLATFORM.

The Republican party in State convention assembled reaffirms its pride in the history and achievements of the National organization and adherence to its principles. The wisdom of its financial policy so fiercely antagonized is now universally conceded, while its protective policy provokes controversy only between revisionists and stand-patters.

Under the magic of these wise policies, the country has vaulted to the

front rank among the nations in finance, manufactures, material development, and general prosperity, while its wage-earners find remuneration twice as great as under any other flag.

The vigorous, able, and wise administration of President Roosevelt commands our enthusiastic approval as it has won the plaudits of our countrymen, regardless of party.

We indorse the recent State administration and commend its splendid achievements to the favorable consideration of every patriotic citizen of the State.

The great calamity which befell San Francisco and its sister cities on the Pacific coast touched the ligature of sympathy which binds all humanity together, and we are proud that Kansas was among the first to respond to this patriotic call upon our common humanity, and that the response has been in harmony with the great heart and abundant resources of this State.

We believe that platform promises are as sacred as business contracts, and should be as faithfully fulfilled, and we point with pardonable pride to the redemption of the numerous promises made in our last State platform. Among the many wise enactments of the last Legislature we call especial attention to the adoption of an improved plan for the management of our State charitable institutions, the selection of a board devoting its whole time to the care of these sacred institutions, with ample headquarters in the State house, a plan which is resulting in an improved condition in all these institutions and a large saving of expenses; to the new State printing law, which within a year has resulted in the erection of a large three-story, fire-proof printing-house, with modern equipment, the cost of all of which has been saved in two years; to the juvenile-court law which is saving countless boys from prison brands; to the State depository law, from which the State is realizing more than \$1,000 per month upon its State deposits; to the fish and game law, which has placed Kansas beside the most advanced States in the protection of game and in the propagation of fish.

The Republican party enacted the first railroad law in Kansas. It has uniformly stood for consistent and efficient regulation of these public corporations. The last Legislature, without any specific platform-promise previously made, enacted a general railroad law, conceded to be the best in the United States. In addition it passed twelve other bills regulating the various relations of the railroads with their employes, passengers, and shippers, constituting altogether the most complete railway legislation ever enacted at a single session by the Legislature of any State. It pledges itself to such amendments and additions to these laws as experience shall justify and demand, to the end that the Board of Railroad Commissioners may become and be maintained an efficient tribunal for the enforcement of exact justice in matters relating to the transportation of passengers and freight.

The Legislature having conferred upon the Board of Railroad Commissioners full power to regulate freight and passenger rates, we pledge the nominees of this convention upon that board to a speedy and conscientious examination and determination of all these questions and the establishment of such maximum rates for passenger and freight traffic as shall be just to the people and the railroads, and we hereby place ourselves in harmony with the policy of President Roosevelt on railroad questions, which policy we heartily indorse.

We are in favor of the passage by Congress of the Hepburn railroad rate bill as it passed the House of Representatives, without amendment that will in any way impair its efficiency or diminish the powers granted by it to the interstate commerce commission.

We again declare our adherence to the principles of a protective tariff and earnestly favor its continuance by the levying of duties on imports to an amount sufficient to prevent ruinous competition with foreign manufacturers who employ cheap labor, but we do not believe that tariff schedules are sacred and we recognize that they should be readjusted from time to time in order to meet changed conditions.

We again express our undying gratitude to the men who fought to maintain the integrity of our Nation and Union and preserve to the world a Government founded upon liberty and equality, as well as to the men who, in later war, carried the flag of liberty to the oppressed of other lands and extended the boundaries of freedom.

We demand strict enforcement of all

BE SURE IT'S MADE IN SAGINAW

When your dealer shows you a low-down farm wagon ask him the question: "Is it made in Saginaw?" If it is—buy it, you can't make a mistake—you can't buy a better one—there's no other that is really as well made and serviceable as the

FARMERS HANDY WAGON

Made in Saginaw. All good things are imitated and that's why we lay so much stress on the point that you make sure it's made in Saginaw. We have made them for 13 years and made them so good we can't improve them now. We guarantee them for 5 years and they practically last a life time; in that time think of the saving in high lifting, draft, repairs, etc. Made with wood or steel wheels. Catalog free.

FARMERS HANDY WAGON CO., SAGINAW, MICH.

Branches, Kansas City and Des Moines. Also makers of Farmer's Hay and Stock Racks and All-Steel Frame Silos. Catalog free.

Wire Fence 29¢

48-in. stock fence per rod only. Best high carbon cold steel spring wire. Catalog, offences, tools and supplies FREE. Buy direct at wholesale. Write today.

MASON FENCE CO. Box 82, Leesburg, Ga.

Well Drills and Drillers' Supplies

The best on the market. Manufactured by THATCHER & SONS, Stillwater, Oklahoma. Write for circulars and prices.

WEED

Cutter for listed corn, adjustable long knives with harrow attachment, seat and draft rod all complete \$6. Free catalogue of snap bargains on many other goods. New Process Manufacturing Co., Lincoln, Kansas.

LAWN FENCE

Made of Steel. Lasts a lifetime. We have no agents. Sold to us at Wholesale Prices. 7cts a foot up. Cheaper than wood. Catalogue Free.

KITTELSON BROTHERS, Box 399, Muncie, Indiana.

\$10.00 Sweep Feed Grinder.

\$14.00 Galvanized Wind Mill.

We manufacture all sizes and styles. It will pay you to investigate. Write for catalog and price list.

CURRIE WIND MILL CO., Topeka, Kansas.

CEMENT FENCE POST or Building Blocks

WITH THE CROUCH \$10 MACHINE

Any Farm Hand can use it. Will not rust or burn. Cheaper than wood, and will last for ages. Circulars Free.

Ellsworth Crouch, Oakland, Kansas

WELL

DRILLING MACHINES

Over 70 sizes and styles for drilling either deep or shallow wells in any kind of soil or rock. Mounted on wheels or on sills. With engine or horse powers. Strong, simple and durable. Any mechanic can operate them easily. Send for catalog.

WILLIAMS BROS., Ithaca, N. Y.

THE 20TH CENTURY GRADER

Best Light Grading Machine made. Grades Roads, Cemeteries, Lawns, Parks, Race Tracks; Levels Land for Irrigation, Cuts Ditches, Cleanse Feed Lots, Barn Yards, Etc. Easily operated by one man. Light, practical and low priced. For general use about the farm or for grading town streets or country roads this grader is unequalled.

ADVANCE

The Continuous Stay

gives Advance Fence its superior strength. Our stay wire is never cut. Thus all the strength of the wire is retained for service. Fully half of it is wasted in cut stay fences.

Let us ship you what Fence, etc., you need. After 30 days if you don't like it, return it to us at our expense and get your money back.

We prepay freight and guarantee safe delivery. You take no risk.

Write today for our free fence book and freight paid factory prices.

Advance Fence Co., 3779 Old St., Peoria, Ill.

Modern Silage Methods

That is the title of our new 216 page book. It tells everything anybody could possibly want to know about the silage subject. You can't think of a question that it does not fully answer. How to build, from foundation up, all kinds of silos. All about the crops and how to cut and fill. How to feed, with the most complete feeding tables ever published. About 40 illustrations help to make things plain. Used as a text book in many Agricultural Colleges. We have always sold the book for 10 cents, but for a limited time, to any reader who will ask for it, and name this paper, we will send a copy free. Write at once.

SILVER MFG. CO., Salem, Ohio.

Agriculture
Dwarf Milo Maize with African Sumac-Sorghum.

I should be glad to see you demonstrate and report as to the value of an experiment I happened to succeed well with last year and shall repeat again. It consists of planting Dwarf milo maize, one-third mixed in planter with two-thirds African sumac-sorghum. In this way I secured about half a crop of average maize, and just as much sorghum as if no maize had been planted with the cane. The heads of maize were double the average size of maize planted alone and stood up to perfection, while on adjoining land planted in maize only, the heads were small and stalks went down badly. The mixed fodder was better than either alone, and the maize and sorghum did not hybridize in the least. When the cane was 10 inches high the maize was 20 inches, and went on and matured very fine heads, and then the cane overtook and overtopped the maize and matured not in the least hindered or mixed with its brother maize, nor was there the least bother in harvesting on account of the mixture.

I do not think the mixture would hinder in my way of heading for seed. My plan is to take a low wagon with wagon-box on, place 4 by 6 lengthwise, one end resting on each endgate of bed, then fasten chopping block conveniently to scantling so block can be removed, when worn out by hacking of the broadaxe or chopping axe. When so prepared I drive in and straddle a corn row and a man on either side of the wagon holds the heads of one of these partially cured bundles on the block and I chop them off into the box, and the man carries the headless bundle to the rear of the wagon, and by the help of the second man starts a shock, and then hands up another from the ground just where the binder had kicked it off. When the wagon is full the three of us proceed to stack as the condition of the grain would indicate.

G. S. NUTTER.
Chaves County, New Mexico.

Your experiment in planting Dwarf milo maize and African sumac-sorghum together is an interesting one. I do not understand why you should secure so large a crop both of maize and sorghum when planted together, unless it be due to the fact that the maize stood up better where it was grown with the sorghum. I doubt whether this method of planting could be recommended for general use in this State, where both milo maize and sorghum succeed equally well.

I am pleased to receive your communication, and hope that you may report the results of further trial.

A. M. TENEYCK.

Cow-Peas Improve the Soil.

Please advise me which is best to sow on thin soil to cut for hay, cow-peas or soy-beans? Would it pay to sow either just before the last cultivation of corn, for fertilizing the land?

Neosho County. E. A. CRALL.

Cow-peas are superior to soy-beans as a forage crop, especially on thin land. At this station on upland soil cow-peas make a ranker growth and appear to be harder than soy-beans. We observe, also, that on land which has not previously been planted to soy-beans, the beans do not thrive well the first season or two, while cow-peas usually succeed fairly well at the first planting. This seems to be partly due to the fact that the bacteria which grow on the roots of the cow-peas are present in the soil, while the bacteria required for the soy-beans are apparently usually lacking. Before soy-beans succeed well it is necessary to inoculate the soil with the bacteria which grow on their roots.

We have been practicing the method of sowing cow-peas in the corn at the last cultivation during the past three seasons with fairly good success. When the season is dry the cow-peas usually make a thin stand and a dwarf growth, but in a favorably moist season a good crop of cow-peas may be grown in corn, planted as described above. Last fall after the corn was cut up on the plots, in which cow-peas were planted in the corn, the vines stood 12 to 15 inches high and covered the ground, and would have made a good crop of green manure, or the peas would have furnished considerable forage or pasture. We left the crop as a cover crop during the winter and will list to corn this spring. These experiments have not been conducted long enough to give definite results.

There is perhaps a tendency for the cow-peas to cause a little lighter crop of corn the year when the cow-peas are grown in the corn, especially when the season is dry, but there is little question that the soil may be improved by plowing under a green growth of peas, which should show its beneficial effect in the succeeding crops grown on such land.

At this station we prefer to sow cow-peas or some other green manuring crop in the grain stubble immediately after harvest, plowing down in the fall, for planting corn the succeeding season. Planted in wheat or oats stubble, the cow-peas usually make a good growth and there can certainly be no injurious effect from growing the crop on the land after the grain crop is removed, while by growing the crop with corn there may be a tendency, as suggested above, to decrease the growth of the corn. Cow-peas planted in wheat stubble last year made a good stand and stood about 15 inches high and were just coming into bloom when they were plowed under September 15.

Other crops which succeed well after wheat, making a good growth for green manuring, are rape, sorghum, and Kafir-corn. Cow-peas, however, should be superior to the others as a green manuring crop, since they actually add fertility to the soil above what is removed in the growing of the plants, due to the action of the bacteria which grow on the roots of the cow-peas, supplying the plants with nitrogen, which the bacteria take from the air. In my judgment there is no better annual crop adapted to Kansas conditions, which may be used in rotation or as a green manuring crop, than cow-peas. The only objection at present is the price of the seed. Every farmer should grow a small patch of cow-peas for seed. The peas may be grown much cheaper than they can be purchased. The New Era and Whippoorwill varieties are well adapted for growing in Kansas. A. M. TENEYCK.

The Seed-Bed.

With viable seed planted in the soil, a few simple factors largely determine the strength of germination, the stand and yield of the crop, and the quality of the grain produced. These factors are moisture, heat, and air. Every farmer knows that a dry seed will not germinate, no matter how favorable other conditions may be. Before the processes are begun, which start or renew life and produce growth, the seed must absorb moisture. Again, every seed requires a favorable degree of heat before it will germinate, and the presence of air is necessary in order to supply the "life-giving" oxygen. A seed placed in a vacuum with the proper degree of heat and moisture will not germinate, and the same results often occur when seeds are placed in a very wet or water-logged soil, because the air is largely excluded from a soil in such conditions.

In order to secure the ideal conditions for seed-germination and plant-growth a seed-bed for wheat should not be too deep and mellow, rather the soil should be mellow and not too finely pulverized, only about as deep as the seed is planted. Below the depth at which the seed is planted the soil should be firm (not too compact), making a good connection with the subsoil, so that the soil water may be drawn up into the surface soil. The firm soil below the seed, well connected with the subsoil, supplies moisture to the seed, while the mellow soil above the seed allows a sufficient circulation of air to supply oxygen, and favors the warming of the soil, gathering the heat of the sunshine during the day and acting as a blanket to conserve the soil heat, maintaining a more uniform temperature in the soil during the night. Meanwhile, also, the mellow soil conserves the soil moisture, acting as a mulch to keep the water from reaching the surface, where it would be rapidly lost by evaporation, and the same condition favors the growth of the young shoot upward into the air and sunshine, where in the presence of oxygen, light, and a favorable degree of heat, the green leaves quickly begin the work of assimilation and the soluble plant-food elements, absorbed by the roots, are rapidly transformed into protoplasm, starch, and the various tissues which build up plant structure, and the young plant grows and is soon firmly established upon its own roots.

With a deep, loose seed-bed the conditions are less favorable for seed germination than in the "ideal" seed-bed described. The mellow soil may be warm enough and well aerated, perhaps too well aerated, causing the soil to dry out, but with the deep, mellow seed-bed, the moisture in the subsoil

is not available for the use of the germinating seeds, because the capillary rise of the water is checked at the bottom of the mellow soil. Such a seed-bed is almost wholly dependent upon rain for sufficient moisture to germinate the seed and start the young plants, and even if such favorable weather conditions prevail at seeding time so that seeds may germinate and the crop start, yet at almost any time during the growing season if drought prevails, the crop growing in the deep, loose seed-bed is more apt to be injured because of the rapid drying out of the surface soil. In such seed-bed the crop is not only apt to "burn out" in summer, but it is also apt to "freeze out" in winter than a crop grown in the "ideal" seed-bed described above.

I can not go into a detailed discussion as to methods of preparing a suitable seed-bed. An excellent seed-bed for wheat may be prepared without plowing when wheat follows corn or other cultivated crops, which are removed from the field sufficiently early to prepare a seed-bed by disking and harrowing.

When plowing precedes the sowing by a short interval, it is well to follow the plow with the subsurface packer and harrow in order to pulverize and pack the soil at the bottom of the furrow and leave a mellow surface. This packing and pulverizing of the furrow slice is especially necessary when the soil is plowed dry or when stubble, trash, or manure is plowed under, because if the furrow slice is left loose and unpulverized, the capillary connection of the soil with the subsoil is largely broken off and the water will not rise into the surface soil to supply the germinating seeds and feed the roots of the young plants, hence, the seed fails to germinate well, the stand is often poor, and in such a seed-bed the crop "freezes out" during the winter or "burns out" during the succeeding summer.

The general experience of farmers and the results of experiments are much in favor of early plowing for wheat. At the Kansas Fort Hays Branch Station, trials carried on for the last two seasons gave an average yield of 11.6 bushels per acre for early plowing, August 1 to August 15; 5.4 bushels per acre for medium plowing, September 1 to September 30; and only 2.1 bushels per acre for late plowing and late sowing, October 15 to October 30. The experiments at the above-named station also greatly favor plowing for wheat rather than disk and sowing in the stubble. As an average for three seasons, land which was plowed, packed, and harrowed gave an average yield of 11.3 bushels per acre, while disked stubble land yielded 6.7 bushels per acre. It pays to prepare a seed-bed well. A. M. TENEYCK, Professor of Agriculture, Kansas State Agricultural College, Manhattan, Kans.

Saving and Handling Manure.

There is no more wanton waste on the farm than the too common waste of barnyard manure. The common practice of throwing the manure from the stables out under the eaves of the barn and leaving it for a long interval in the yards exposed to the leaching of rains or to decomposition by drying and heating results in a great loss of plant-food elements. An experiment in determining the loss of manure by exposure was carried on at the Cornell Experiment Station, in 1890, as reported in Roberts' "Fertility of the Land." In this experiment horse manure, in a loose pile, valued at the beginning at \$2.30 per ton, lost 42.6 per cent in value. Cow manure, valued at \$2.29 per ton, lost 30 per cent in value. In another experiment a ton of fresh manure, valued at \$2.30, lost 42 per cent in value by暴露 of six months in the open yard. In comparison with this, manure which had been kept in a covered yard in 1883-84, being the entire product of the stock for that year, when analyzed was found to be richer in nitrogen, phosphoric acid, and potash than fresh manure, and was valued at \$3.61 per ton.

Probably the most economical way to handle manure when stock is kept in stables is to haul directly from the stables to the field, spreading the manure at once, preferably on grass or alfalfa land, although the manure may be hauled onto any land which is in condition to receive it. It may not be practicable to recommend the use of covered barnyards in the West, but it is practicable to furnish abundant shelter room for sheltering stock during the winter-feeding season. It is also essential in order to save the manure, especially the liquid manure, to give a liberal supply of bedding for the stock.

THE FIRST

Hartman Stockade Woven Wire Fence

Ever built was erected 17 years ago and is still in use as durable and strong as when first put up. The Hartman is a perfectly woven wire fence that is strong enough to keep in the maddest bull and fine enough to keep out the chickens. It is made of the best quality galvanized steel wire and contains much more material than fences more cheaply constructed. That's why it lasts so long. If your dealer doesn't handle it, write for catalogue and prices. Address

GLEN MFG. CO., 145 Main St., Ellwood City, Pa.
Also Mfrs. Hartman Steel Picket Fence, Hartman Flexible Wire Mats and Grea Steel Mat.

Usually, farmers in the West have plenty of straw and roughage which may be profitably used for bedding in the stables, sheds, and yards. The barnyard should be well drained; however, there is apt to be a great loss of the soluble elements of plant-food where the drainage water is allowed to run away through natural drainage channels. If possible, such drainage should be turned over grass meadows or pastures, in order that the most available part of the plant-food in manure may not be entirely lost. It is not possible to haul manure daily from the yards and sheds, but the farmer should have a regular time for hauling out the manure and cleaning up the yards; preferably, this work should be done two or three times during the year in order not to allow too great an accumulation and the waste which is sure to take place by decomposition and leaching.

The advantage of spreading manure with the manure-spreader is that the manure can be more evenly and thinly distributed. It is better to spread manure rather thinly over a large area of land than to spread it thickly over a small area. By heavy application there will be not only a waste of manure, but when a heavy coat of manure is plowed under it is apt to injure the crop by "burning out" in a dry season. When the manure can be handled daily or can be hauled from the stables as made and spread on meadow or pasture land, it is very handy and almost necessary to use a manure-spreader. The use of the manure-spreader is not so practical, however, when the manure is hauled out only once or twice a year, as is the common practice. It is usual in such a case to turn all hands and teams to the work of hauling manure, thus making it impracticable to use a single spreader, and several manure-spreaders could not be profitably owned and operated except on very large farms. It would be possible, however, for farmers in a neighborhood, by exchanging work, to cooperate in the hauling of manure, when several manure-spreaders might be economically owned and operated in a single neighborhood.—A. M. TenEyck, in *The Industrialist*.

Pasture Grasses for Wet Land.

Kindly advise me what kind of grass I should sow for hog pasture. I have five acres of wet land of which I wish to make hog pasture. How many hogs would five acres of grass support along with a little other feed?

HENRY L. VERNON.
Jackson County, Arkansas.

In your section of the country on the land which you describe, the following is a good combination of grasses to sow for hog pasture—English blue-grass 12 pounds, timothy 6 pounds, and Alsike clover 3 pounds per acre. If your purpose is to continue the land in permanent pasture, a little Kentucky blue-grass and white clover might be included with the above-named grasses and clover. Sow 8 to 10 pounds of good Kentucky blue-grass and a pound of white clover with the amount of seed of each of the grasses named above. Kentucky blue-grass and white clover start slowly and will not furnish much pasture for a year or two, but gradually the other grasses will become less productive, and the blue-grass and white clover will spread and take the place of the less permanent grasses. However, if the land may be rotated and planted with other crops, it would be well to break up the pasture every four to six years, planting it for a year or so to corn and then reseeding, since the combination of grasses with Alsike clover will give a greater abundance of pasture than is likely to be secured from Kentucky blue-grass and white clover. With this field well set with grasses and clover, it should furnish pasture for twenty-five to thirty hogs.

It will be advisable for you to write to your State Experiment Station, at Fayetteville, asking for further information along this line.

A. M. TENEYCK.

Millet for Hay.

Kindly advise when to sow millet for the production of hay. Is millet hay good feed for horses? I wish to sow about 3 acres. Is millet hay better than cane for horses? How much millet-seed should be sown per acre?

Franklin County. W. H. B.

It is usual to sow millet rather late in the spring. At this station we sow millet soon after planting corn, about the middle to the last of May, although it is practicable to sow earlier or later if it suits the convenience of the farmer. I have observed, however, that the earlier-sown millet does not make so good a growth as that sown later, and

also the early-sown millet is apt to be weedy, and often makes a poor stand. Again, millet sown late in the season when the weather has become hot does not usually make much growth, although certain varieties may be sown later than other varieties. I have observed at this station that the common fox-tail millets, such as the Siberian, German, and Hungarian varieties, do best when sown rather early in the season, while the broomcorn or hog-millets usually make a better crop when sown as late as the middle of June.

Millet hay is not considered a good feed for horses. The hay seems to act unfavorably on the kidneys, causing ill health, and horses fed exclusively on millet become stiffened in the joints, and some animals have died from the effects of eating the hay. For bulletins discussing the feeding of millet hay to horses I refer you to the North Dakota Experiment Station, Fargo, N. Dak. Millet hay is better feed for cattle than for horses. Cane will probably make a better roughage for horses than millet, although I would advise not to feed cane exclusively. Perhaps Kafir-corn fodder is preferable to cane fodder, or a combination of cane and Kafir-corn makes good roughage for horses or other stock.

It is usual to sow about 2 to 3 pecks of millet-seed per acre. If cane or Kafir-corn is sown broadcast, sow about a bushel of each separately or half a bushel of each in combination.

A. M. TENEYCK.

Farm Notes.

N. J. SHEPHERD, ELDON, MO.
No young animal is profitable that is not growing steadily.

With horses, comfort in the stable means service in the field.

Get all of the manure hauled before cultivation begins.

While hogs should have plenty of water, it should be pure and fresh.

The putting in and culture of the crops has much to do with productivity.

The management and care of the stock of the farm will decide to a great extent its profitability.

Horses need a change in rations, according to the kind and amount of work they are required to do.

The weeds should be just as carefully kept from occupying the ground when the ground is vacant as when occupied with a crop.

Too much time can not well be spent in making improvements on the farm, when the improvements increase the productiveness and value of the land.

In order to obtain the full value for the wool it must be sent to the market in the best condition possible.

The stability of any industry depends to a great extent on its profitability, and its profitability, as a rule, depends on its management.

There is no work required of any horse, let the duty be ever so menial, where intelligence, honesty, and kindness will not be of material value.

Never sell the yearlings and younger stock while there are older animals that can be disposed of with equal advantage and which will not grow into more money.

A kind disposition is a very important quality in a horse, and should be looked after very carefully in selecting one for practical use.

Charcoal given to animals, especially to poultry and swine, acts upon the blood as a purifier, often being found of benefit when there is no definable disease.

The best horse is the one with a kind and tractable disposition, well broken and above all the one that is the most serviceable.

Feeding, location, and judicious selection of parents on both sides are powerful factors in producing good stock of all descriptions.

Always select smooth and growthy animals to feed, even at greater cost, and the profit will certainly be in proportion to the good judgment exercised in making this selection.

With all crops the early cultivation is the most important, and in nearly all cases the sooner the cultivation is commenced after the crop is planted, the better.

It is not wise to attempt to graze too much stock on a given number of acres nor to plow and crop more than can be kept in the highest state of fertility by suitable fertilization.

Keep up with the work as fully as possible. With all crops the best results are possible only when the necessary work is done in given season. Better hire a little extra help than to get behind.

SAVE HALF THE TIME

Half the Work

The farmer who is looking for machines that will do his work in less time—that will increase his working force one-half by enabling him to do the same work in half the time, cannot afford to overlook the time-saving features and up-to-date improvements embodied in the

Do Better Work

"St. Joe" Double Row Disc Cultivator

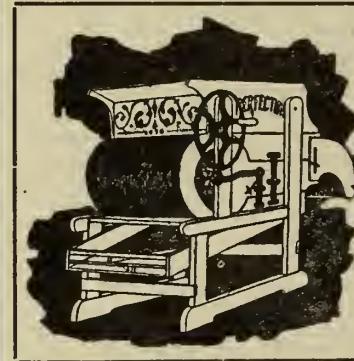

This improved cultivator is equipped with our new patent **Seat Board**, which runs on Rollers and will adjust itself much easier than any other seat board—a vital point in its favor. **Four Levers** make this machine handy to operate—always under complete and perfect control. **Four Coil Springs** are used—two to assist operator in raising Discs, two to cushion the Shovels

when striking obstructions. **Adjustment** is simple and easy—suit the work—we describe how this is accomplished in our free circular which the farmer can have simply by asking for it. Tells of more good cultivator features than any other machine on the market has. Write for the circular to-day and see how this machine saves you time and money.

ST. JOSEPH PLOW CO.,
Box 12 St. Joseph, Mo.

Do You Know?

That one handful of noxious weed seed to a bushel of your grain, if planted, will absolutely ruin the crop. There are many cleaners that will remove all but that last handful of the weed seed from your grain, but the "Perfection" is the machine that does the work the way it should be done. ¶ Better own the machine that is easy to operate, easy to understand, and yet does its work so perfect that your crops are increased 25 per cent to 50 per cent. :: :

A "Perfection" cleans, separates and grades anything from Corn to Red-Top.

Write us today and we will tell you what it will do as well as show you how it does it. Be sure and tell us the kind of grain you raise.

THE LEWIS-TUTTLE MFG. CO.

305 C KANSAS AVENUE, TOPEKA, KANSAS.

THE JAYHAWK STACKERS AND RAKES

Have been proven the best by test.

No loose spots to settle, take water and spoil.

It saves 50 per cent of the labor on the stack.

It can place hay in any spot on a rick of any length.

It builds a rick 20 feet high.

It is valuable in retopping.

No troublesome pulleys.

No stakes to drive.

No trouble with winds.

No time lost moving.

No upsetting.

No bother with long ropes.

It is a good wagon loader. It has only 18 foot of rope. Team only travels twice as far as the load is raised. The load can be carried and dumped at any point of elevation. It is a great labor saver.

We also manufacture two patterns of

Johnston, Caldwell, Kans., manager.

Swine-Feeding Tests.—Armour's Deodorized Meat-Meal and Alfalfa Hay as Supplementary Feeds to Corn.

The animal husbandry department, Experiment Station, Kansas State Agricultural College, reports in Press Bulletin No. 149 as follows:

Numerous questions are being received at the Kansas Experiment Station as to the value of the various packing-house by-products recommended for swine-feeding in connection with corn, and during the winter of 1905-'06 an experiment was carried on to secure more data on the subject. The value of alfalfa hay as a means of

Lot II, corn-meal five-sixths, and Armour's deodorized meat-meal, one-sixth. Lot III, corn-meal and all the alfalfa hay they would consume.

A feed-rack was used for the alfalfa hay similar to a sheep-rack without legs. This method kept alfalfa hay before them at all times without waste. The hay was fed uncut.

The value received per bushel for corn marketed via the pork route is an excellent method of calculating the profit from feeding. In the case of Lot I, figuring the cost of the pigs at the beginning of the experiment at 4 cents per pound, we have the difference between \$51.60 and \$123.54, or \$71.94, to credit to the 13.73 bushels of corn which each pig consumed, returning a value of 52 cents per bushel for the corn. With Lot II, after deducting from the \$169.72 received for the hogs at the market, the cost at 4 cents, or \$51, and the cost of the meat-meal fed, we have \$87.68 to credit to the 14 bushels of corn which each pig consumed, or a value of 62½ cents per bushel. With lot III we have left \$77.32 to credit it to the 14.06 bushels of corn consumed per pig, after deducting \$52.40, the original cost of the ten pigs, and \$5.36, the cost of the hay consumed. This gives a value of 55 cents per bushel for the corn fed. This shows that 20 per cent is added to the value of corn by feeding meat-meal at \$2 per cwt. as a supplementary feed, and 5.8 per cent added to the value of the corn by alfalfa hay at \$8 per ton.

These hogs were shipped direct to the Chas. Wolff packing-house, Topeka, Kans., and slaughter tests were obtained of the different lots. The Government inspector, Dr. De Wolf, pronounced the whole bunch as unusually healthy. The lymphatic glands were large and soft, and only one case of parasitic infection of the liver was found. All had more leaf-lard than the average hog sold on the market. The amounts for the different lots were as follows: Lot I, 90 pounds; lot II, 94 pounds; lot III, 90 pounds. Although lot II seemed much fatter and heavier on foot, the leaf-lard was but slightly greater. The superintendent of the packing-house, J. B. Nicholson, stated that the flesh of lot II seemed firmer than the others in the warm condition. The hogs receiving alfalfa hay showed very fine carcasses.

The results of this experiment serve to emphasize the importance of converting the raw material of the farm into a more finished product in order to secure higher prices on the market, and also to retain a much higher per cent

TABLE I—WEIGHTS AND GAINS.

TABLE III—FEED COST AND COST OF GAINS.

No. of lot.	Kind of feed.	Pounds fed.	Value of feed consumed	Cost of feed per cwt.	Pounds of gain per 100 lbs.
I.	Corn-meal	7,690	\$0.62 1/2	\$48.06	\$4.33
II.	{ Corn-meal	7,848	62 1/2	49.05	{ 397.3
	Meat-meal	1,552	2.00	31.04	{ 78.5
Total.			\$80.09		
III.	{ Corn-meal	7,875	62 1/2	\$49.22	{ 596.5
	Alfalfa hay	1,340	.40	5.36	{ 101.5
Total.			\$54.58		

Increasing the value of corn in pork production was also made the subject of one test in this experiment. Its value for growing swine and breeding stock has been recognized for some time, but its value in the fattening pen is still a subject of inquiry. Thirty strong, thrifty shoats were available for this experiment, and they were divided as equally as possible into three lots of ten pigs each. The pigs were all cross-bred, and in the division an equal number of each particular cross were placed in each of the three lots as follows: Three Berkshire X Yorkshire pigs, three Berkshire X Tamworth pigs, two Poland-China X Berkshire pigs, and two Poland China X Duroc-Jersey pigs. The average weights of these three lots on October 9, 1905, when the experiment began, were as follows:

Lot I, 129 pounds; lot II, 127.5 pounds; and lot III, 131 pounds.

The rations were as follows:

Lot I, corn-meal.

THE KANSAS FARMER

The best hand tool a farmer can use is a Keen Kutter tool. A Keen Kutter hoe, fork, shovel, or scythe will do more hoeing, pitching, shoveling, or mowing than any other similar tool—because it is better adapted to its work and stands more hard wear. Farmers accomplish more, and make more when they use

KEEN KUTTER TOOLS

Hoes, Forks, Scythes, Shovels, Manure-hooks, Rakes, Grass-shears—all Garden Tools and a complete line of Carpenter Tools—are each of the very highest quality.

All working or cutting parts are forged from best crucible steel, and oil tempered to give elasticity and long wear. This careful manufacture makes Keen Kutter tools long-lived—they last twice as long as common tools. Each Keen Kutter Tool is finely finished, and properly hung or adjusted for best and easiest work.

Ask your dealer to show you tools bearing the Keen Kutter trade mark. If he does not have them write us.

Moore Chemical & Mfg. Co.
Manufacturers of Shipping Trade, 1501-03 Beale St., Kansas City, Mo.

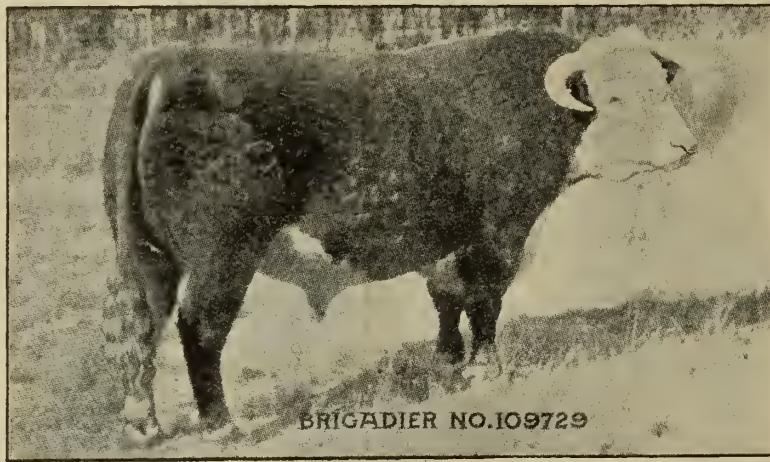

fering, and Mr. Rockefeller writes that that are all very fine individuals. This is the second time Mr. Mills has sold for Mr. Rockefeller, as is also the case with Mr. W. S. Swinney, Bois d'Arc, Mo., who is sending a car-load of very fancy young bulls and heifers by the famous American Royal first prize winner, Brigadier 109729, a double Anxiety 4th sire, frequently shown, but never defeated, and unquestionably the greatest son of Gudgel & Simpson's Lamplighter, now living. A car-load of steers by Brigadier recently topped the Kansas City market, selling for the highest price since Christmas. This fact should prove an incentive for farmers, breeders, and ranchmen to take advantage of this opportunity to secure a young Brigadier and go and do likewise. Mr. Swinney's consignment also includes some choice ones by the prize-winning Dale Jr. 157199, the best son of the \$10,000 Champion Dale.

Mr. Swinney writes, "Our consignment will be fully as good or better than the ones we had in your February Kansas City sale," and all who saw them there will remember that they were beautifully conditioned and a most uniform lot. Continuing, Mr. Swinney states that Lot 4, Emanuel, is as good a 2-year-old as the one Mr. Crawford paid \$300 for in your Kansas City sale, and Lot 5, Clover Leaf Beau, is a better one than sold in that sale. We wish to emphasize the fact that few if any better consignments than this one have been seen in any sale this season.

S. L. Standish, Hume, Mo., is also a frequent contributor to Manager Mills' sales, and he never leads an animal in

mate. Countess Victoria 2d, brought \$405, going to Jas. Duffus, Malcom, Ia. The choice of the bulls went to Delmer McCann, Kennard, N.C. The following is a list of the sales over one hundred dollars with this summary:

24 cows and heifers brought	\$5,040.00
Average	210.00
12 bulls sold for	1,575.00
Average	131.00
36 head brought	6,615.00
Average	183.75

WICHITA SALE, MAY 17, A CARLOAD OF BRIGADIERS ARE INCLUDED.

At the great Wichita, Kans., sale next Thursday, May 17, one of the attractions will be a carload of the get of the first-prize double Anxiety 4th Brigadier 109727. This great show and breeding bull was a first prize winner at the Royal, and although frequently shown, has never been defeated. A carload of steers by Brigadier recently topped the Kansas City market, selling for the highest price since Christmas. He is owned by Mr. W. G. Swinney, Bois d'Arc, Mo. Other Hereford consignors are Frank Rockefeller, Belvidere, Kans.; S. L. Standish, Hume, Mo., owner of Onward 4th; G. L. Rinehart, Hunnewell, Kans.; H. Monroe, Lyons, Kans.; N. Molzen, Newton, Kans.; Klaus Bros., Bendena, Kans.; and others. A grand array of Shorthorns will also be auctioned the same day, and the sale will take place in G. O. Morgan's Riverside Barn, West Douglas Ave. Catalogues ready. Address D. R. Mills, Sale Manager, Des Moines, Iowa.

the ring that is not strictly high-class in every particular. Some of the superb young heifers in his consignment are safe with calf to Onward 4th, champion bull at the Royal and many fairs during 1903-4, for which bull Mr. Standish paid a long price. Other gilt-edged heifers in this consignment are bred to Beau Ideal, who stood so high up in the show-rings of the Royal and other places. Mr. Standish also includes two splendid bulls by Columbus 47th, that are hard to beat.

W. H. Rhodes, Tampa, Kans., sends a very select consignment, by his show and breeding bull, Keep On 4th, winner at the International and Royal shows, and many State and county fairs.

Mr. G. L. Rinehart, Hunnewell, Kans.; Mr. N. Molzen, Newton, Kans.; and Mr. H. Monroe, Lyons, Kans., list a most attractive lot, and one thing sure is the fact that buyers at this great sale will positively not be disappointed in the exceptional quality and breeding of the cattle listed, and there will be no trouble to fill out carlots from the large variety catalogued. A postal card to D. R. Mills, sale manager, Des Moines, Iowa, will bring you an illustrated catalogue, and no admirer of the breed can afford to remain away from this most important event in sale circles. Seventy-five head of both breeds are listed, and the sale will begin at 10 a.m.

A Successful Sale of Scotch Shorthorns.

The sale of pure-bred Scotch Shorthorns by Geo. Allen, of Lexington, Neb., at South Omaha, Neb., May 1, was a complete success, so far as the cows are concerned, but the prices paid for most of the bulls were unsatisfactory. There was a good attendance of representative breeders, both veteran and beginners, from Nebraska, Kansas, Iowa, Missouri, the Dakotas, and Minnesota, and bidding was very spirited on the females. The yearling heifer, Lady Missie 3d, topped the sale at \$425, and was taken by Uncle Tom Andrews, of Cambridge, Neb., and her roan

SCREW WORMS IN CATTLE.

In most of the Southwestern states screw-worms cause severe losses, as cattlemen well know. Prof. Wilson, of the Arizona Agricultural College, writes us, regarding his experience with Zenoleum and says that they have used it very successfully in combating the screw-worms, also for treating sheep for catarrh, as well as for disinfesting the yards and barns and suggests that the station will never be without a plentiful supply for any emergency. This coal-tar preparation is made by Zenner Disinfectant Company, 61 Lafayette Ave., Detroit, Mich. In small lots, the price is \$1.50 per gallon, express paid, but lower quotations are made on larger quantities.

Last Call—Wichita Shorthorn Sale, Next Thursday, May 17.

Next Thursday, May 17, at Wichita, Kans., a very high-class lot of Shorthorns will go under the auctioneer's hammer at G. O. Morgan's Riverside Barn, West Douglas Ave., beginning at 10 a.m., and every admirer of the breed should send at once to D. R. Mills, sale manager, Des Moines, Iowa, for catalogue, now ready. The consignors are Henry Stunkel, Peck, Kans.; R. W. Swain and Henry Burling, Caldwell, Kans.; F. H. Foster, Lyons, Kans.; M. D. Crittenden, South Haven, Kans.; D. M. Howard, Rossville, Kans.; Locust Grove Farm, Nardin, Okla.; Grimes Bros., Montrose, Iowa; D. Donohue, Appleton City, Mo.; and others. This sale will present possibly the last and greatest opportunity of the season to secure high-class bulls and herd-headers. Mr. Stunkel writes of the carload of young bulls he is sending, by his richly bred Cruickshank Butterfly sire, Victor Orange 190218, one of the best show and breeding bulls in the United States: "This is the best lot of bulls I ever raised, and in fact it would be difficult to find a better bunch anywhere; they are all of the same uniform, thick, blocky set type, all but one by Victor Orange, this one being Hudson Captain 156300, a son of the pure Scotch Imp. Village Captain 135232." Mr. Stunkel's consignment embraces the most fashionable families of the breed, and he adds, "These bulls are in nice condition, and I am satisfied my stock will sell well if the buyers will turn out to see them."

Col. Lafe Burger has inspected the cattle consigned by Messrs. Swain, Burline, Crittenden, and Locust Grove Farm, and writes as follows concerning them: "This stuff is first-class, in fact, three of the Shorthorn bulls are 'crack-jacks.' One of them, Lavender Lad, a red of November '04, is a show-bull, and considered the peer of any young bull in Kansas or Oklahoma, having been shown a number of times and never defeated. He is of the true Scotch

Horse Owners! Use

type, and bred in the purple. Another good one, listed by Mr. Swain, is the February yearling by Orango Lad 17270, out of Miss Graceful by Red Royal 12913, a thick-lashed fellow of much promise. Mr. Foster's dark-red 2-year-old Cruickshank-topped Young Mary, "Sucess," is another attractive offering, by the choicely bred Lovely Gloster 184123, dam by the Bellows bred Scottish King 100743. As space forbids, it is impossible to describe the entire consignment, 75 head of both breeds being listed. Catalogues will be cheerfully forwarded upon application to D. R. Mills, sale manager, Des Moines, Iowa.

Darling Brothers' Shorthorn Sale.

Last Saturday Darling Brothers, of Stella, Ohio, who rank among the foremost breeders of the East, sold at public auction, at Mankato, Kans., a consignment of Shorthorn cattle, consisting of nine bulls and seven heifers. The sale was something in the nature of an experiment as there was some doubt as to how the breeders of Kansas would appreciate an offering of this kind. The cattle were shipped by freight from Stella, Ohio, to Randall, Kans., arriving there ten days ago. From Randall they were driven to Mankato the day before the sale, a distance of sixteen miles, and in spite of all rough handling and the long drive, they were as fresh as though they had just been taken from the feed-barns, and it was the opinion of every breeder present that a finer lot of thoroughbreds had never before been offered to Kansas buyers. Had these cattle been earlier in the season the average prices would have been much higher, but being so late many breeders had made previous arrangements for their herd-headers, but in spite of the adverse conditions the stock sold well. The top price was paid for the 2-year-old bull Duke of Evergreen 34th 252726, which went to J. M. Baker, the well-known Shorthorn breeder of Narka, Kans., for \$165. The following is a complete list of the purchases at the sale:

Three-year-old heifer, August Good,	\$65.00
Three-year-old heifer, August Good,	75.00
Three-year-old heifer, John Baker, Narka, Kans.	97.50
Two-year-old heifer, August Good,	77.50
Two-year-old heifer, P. O. Green, Mankato, Kans.	75.00
Two-year-old heifer, Dazy Bros., Mankato, Kans.	80.00
Aged cow, Harry Wheeler, Jewell County.	117.50
Total.	\$587.50
Average per head.	\$83.93
Two-year-old bull, J. M. Baker.	\$165.00
Two-year-old bull, Jno. Kemmer, Mankato, Kans.	117.50
Two-year-old bull, Dazy Bros.	90.00
Two-year-old bull, H. J. Damenberg, Gaylord, Kans.	100.00
Two-year-old bull, H. C. Akrens, Mankato, Kans.	100.00
Two-year-old bull, C. Ellis, Mankato, Kans.	90.00
Two-year-old bull, Jno. Kemmer	87.50
Two-year-old bull, Geo. Meadner, Mankato, Kans.	662.50
Two-year-old bull, Barker Bros., Aurora, Kans.	95.00
Total.	\$907.50
Average on bulls.	\$100.83

Where the Grand Champion Grew.

On the little farm of John W. Baker, in the hills northeast of Strong, Kans., the stage is being set for the closing act of a most interesting chapter in Shorthorn history. The man that bought, developed, and first showed the grand champion bull, Master of the Grove, goes out of business May 16, and on that day will hold his first and last public sale—a dispersion. Ill health—the only thing that could separate him from his loved Shorthorns—is the cause.

In this sale, to which Mr. Baker invites his neighbors and his friends, the breeders from everywhere will be mature cows, heifers with their first calves, heifers unbred, and a few young bulls, some ready for service and some too young. About half the offerings will be by Master of the Grove. Several of them and some of the calves out of Master of the Grove cows are suitable material for the fall shows. Some of the best very young things are by Lopez 231291, a son of Mr. Babst's famous Lord Mayor, that promises to be as great a sire and show animal as Master of the Grove proved to be. Here is truly a select little herd of cattle, and its dispersion will be one of the most interesting events in Kansas fine-stock history. Remember the date—May 16—and send to Mr. Baker for any particulars desired.—Telegram.

Dipping the Armour Herefords.

The annual dipping of the Armour Herefords in Car-Sul Dip is now in progress at the Meadow Park Farm just south of Kansas City. In speaking of the benefits to be derived from the regular dipping of cattle and other live stock, Mr. W. J. Cummings, manager of the Armour herd, recently remarked that he thought the dipping of live stock would continue to increase in popularity because of the benefits to be derived from the use of efficient disinfectant dip such as Car-Sul. The annual dipping of the Armour Herefords is not done because of mange, or anything of that character, but because Mr. Cummings believes that dipping is beneficial to the general health and condition of the animals. They have made it a practice for several years and use only Car-Sul.—Telegram.

M. C. Vansell, of Muscotah, Kans., makes a change in his advertisement this week and offers his herd-bull for sale. This bull is 3 years old and weighs a little over a ton in good breeding condition. He is not fat. He is not sold for any fault, but because Mr. Vansell must make a change in his herd. The bull is just the right age, and in just the right condition to do good hard service. Somebody will get a bargain in this bull. Write at once and mention THE KANSAS FARMER.

--------------------	-----------

Osage County Pomona Grange.

The Pomona Grange, of Osage County, met in Hurricane Grange hall in Overbrook at 1:30 o'clock, April 7.

The weather was very rainy and the roads extremely bad, so the meeting was not as well attended as usual. There were twenty delegates present, and probably about that many visitors.

Trustees elected for this year were as follows: O. L. Tabor, of Burlingame Grange; A. L. Ovessen, of Highland Grange; and Jos. Bulmer, of June-
tion Grange.

There was some informal discussion in regard to ways and means of increasing Grange work and influence throughout this county, also concerning Grange property insurance.

The question for discussion, "The Initiative and Referendum," was placed before the meeting, but it was getting so late and was so rainy that some of the members were obliged to leave, so the discussion was cut short. However, our Pomona secretary, Lester Pierce, of Richview Grange, has agreed to prepare an article on the same topic for the next meeting, which will be followed by a discussion in which it is hoped many will take part. The referendum has been endorsed by the State Granges of at least eighteen States, among them being the Kansas State Grange. This is a non-partisan movement for the establishment of the people's sovereignty in place of machine rule, and in some States has made much progress.

The question of Grange life insurance will be brought up at the next meeting, which will be at Melvern, July 28.

At the last meeting of Hurricane Grange, a suggestion was offered by W. T. Diekson that an effort be made to get enough Osage County patrons to fill a car to attend the next meeting of the National Grange, which will be held in November at Denver, Col. This plan will probably be brought up at the next meeting of Pomona Grange.

Remember the date, July 28, Melvern, and come prepared to say or do something to help make an interesting meeting. JENNIE E. HEBERLING, Lecturer, Pomona Grange, Osage Co.

The Grange in Osage County.

EDITOR GRANGE DEPARTMENT:—Carbondale Grange No. 754 is in a prosperous condition. We have recently received five new members by initiation, and have four new applicants ready for the ceremony at our next meeting. Every one of our members seems to take an active part to make our meetings interesting.

We have had under consideration the question of good roads until we have got it in action. Every neighborhood has a King split-log drag, and after each rain the roads are dragged, and in this way we are succeeding in having good roads. We think those neighborhoods that have no drags yet will soon fall into line, and we will eventually have good roads all over the county.

Osage County Pomona Grange met at Overbrook in April, but owing to rain and heavy roads the attendance was small. The next meeting will be held at Olivet on the fourth Saturday in July.

Carbondale Grange meets every Wednesday night, and the meetings are interesting and profitable. We extend a cordial invitation to the members of other granges to visit us.

A. P. STENGER, Lecturer.

Dr. Hess Poultry Pan-a-ce-a is the best aid for growing poultry—a tonic that helps a fowl eat more food and thoroughly digest it, forcing a rapid, healthy growth. It tones the egg-producing organs, so hens lay in all seasons. It quickly builds flesh on market poultry. It cures all poultry disorders—gapes, roup, cholera, indigestion, leg weakness, diarrhea; makes it possible to keep the whole flock in perfect health all the year round.

DR. HESS Poultry Pan-a-ce-a

is the prescription of Dr. Hess (M. D., D. V. S.), containing the ingredients recommended by science for increasing digestion and assimilation, also supplying iron for the blood and toning up the entire system. It has special germicidal principles which destroy all minute bacteria to which fowls are so subjected. Poultry Pan-a-ce-a is the greatest tonic for the young, makes them grow fast, healthy and strong. It bears the endorsement of leading poultry associations in the United States and Canada. Costs but a penny a day for about 30 fowls, and is sold on a written guarantee.

1 1/2 lbs. 25c, mail or express, 40c; 5 lbs 60c; { Except in Canada and
12 lbs. \$1.25; 25 lb. pail \$2.50. { extreme West and South.

INSTANT LOUSE KILLER KILLS LICE

A Square Deal Wanted.

Iowa cries for a square deal in the interstate commerce law situation, and the remarks of A. B. Judson, master, are pertinent. They follow:

"Nearly twenty years ago, when the farmers secured the enactment of the interstate commerce law with a commission that was supposed to have power to enforce the law, there was general acquiescence in the result as a moderate exercise of the constitutional powers of the Government. The law went into effect and remained in full force for several years without injury to the railroad corporations and to the general satisfaction of the public. I have wondered why a measure so just and moderate and so thoroughly tested and fortified by experience should evoke so much opposition from certain quarters. All that the people want is a 'square deal,' and that they are going to have, and the quicker the corporations realize that fact and withdraw their opposition to President Roosevelt's plan, the better it will be for them."

More Happiness and Prosperity

Is the result of the work of that great fraternal organization, the Grange, says the master of the Iowa State Grange.

"It is the purpose of this great fraternal organization to increase happiness in all our farm-homes and to make agriculture more prosperous in all parts of our glorious country. This organization teaches, among other things, that honesty, integrity, fair dealing, giving value received in all exchanges, industry, frugality, and thrift, and observing the Golden Rule are essential characteristics of good citizenship, setting its seal of condemnation on all forms of fraudulent practices, extortion, or robbery, whether done under the form of law, combination, monopoly, or trust methods, or by the more vulgar practice of common stealing, thus building up a public sentiment that the man or corporation that simmers millions of dollars in any other way than honorable methods, based on the principle of always giving value received. This organization places its seal of condemnation on all forms of modern graft, whether in high places or low. Let the guilty be punished, whether they are millionaires or paupers, public officials or private citizens."

McLaughlin Bros., of Kansas City, Columbus, and St. Paul, have this to say about their importations of Percheron stallions: "Our regular importations take place each year in July and November. Those are the months in which we expect to receive most of our horses; but our business has been so large, and the demand upon us has been so great during recent years that we have been obliged to make many more frequent importations. Although our stables were full and we had an overflow of about 20 stallions on the first of January of this year, yet we have already received one importation of 42 stallions, and we received a cable message this morning from Mr. James McLaughlin, in which he says that he is sending 48 more stallions on the Atlantic Transport Steamship 'Minnetonka.' Mr. McLaughlin will bring over his largest importation in July, most of which are already bought, to be delivered after the breeding season will be over. The 42 stallions that came last month are nearly all sold. The 48 that are coming will hardly supply the demand until our regular July importation will arrive."

Every Tuesday, balance of the year, the Chicago Great Western Railway will sell homeseekers' tickets to Minnesota, North Dakota, and Canadian Northwest at about half rate; to other territory first and third Tuesdays. Write G. W. Lincoln, G. P. A., 7 West 8th St., Kansas City, Mo. State number in party and when going.

CONDUCTED BY RUTH COWGILL.

Laus Mortis.

Nay, why should I fear Death,
Who gives us life, and in exchange
takes breath?
He is like cordial Spring,
That lifts above the soil each buried
thing;
Like Autumn, kind and brief—
The frost that chills the branches frees
the leaf;
Like Winter's stormy hours
That spread their fleece of snow to
save the flowers;
The lordliest of all things—
Life lends us only feet, Death gives us
wings.
Fearing no covert thrust,
Let me walk onward, armed in valiant
trust—
Dreading no unseen knife,
Across Death's threshold step from life
to life!
Oh, all ye frightened folk,
Whether ye wear a crown or bear a
yoke,
Laid in one equal bed,
When once your coverlet of grass is
spread,
What daybreak need you fear?
The Love will rule you there that
guides you here.
Where Life, the sower, stands,
Scattering the ages from his swinging
hands,
Thou waitest, Reaper, lone,
Until the multitudinous grain hath
grown.
Scythebearer, when thy blade
Harvests my flesh, let me be unafraid.
God's husbandman thou art,
In His unwithering sheaves, oh, bind
my heart!

—Frederic Lawrence Knowles, in
"Love Triumphant."

The Resurrection.

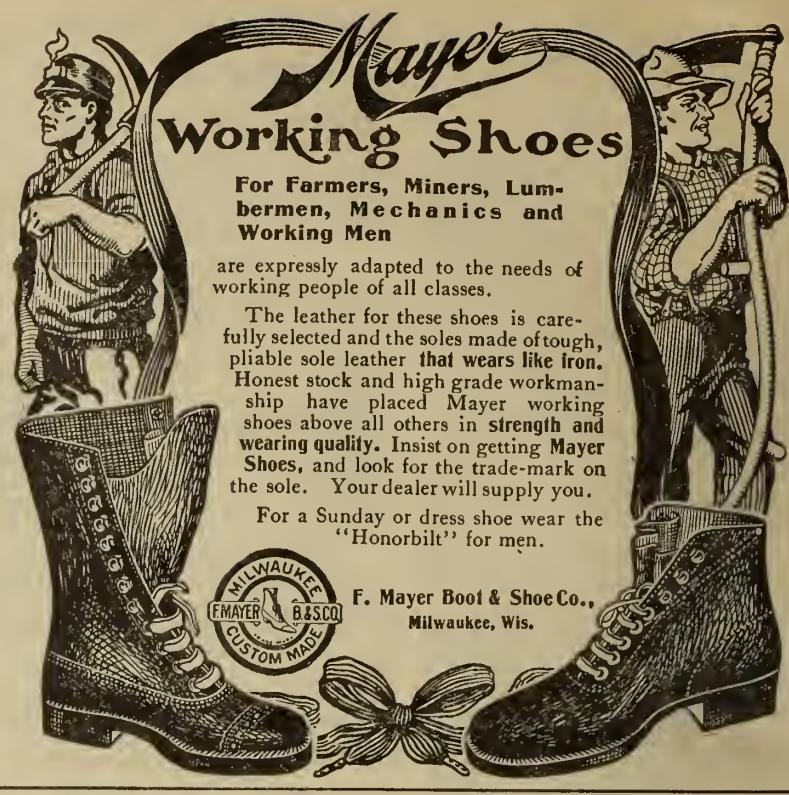

FLORENCE SHAW KELLOGG, FAY, KANS.

"But yesterday all life in bud was hid;
But yesterday the grass was gray and
sear,
To-day the whole world decks itself
anew
In all the glorious beauty of the year."

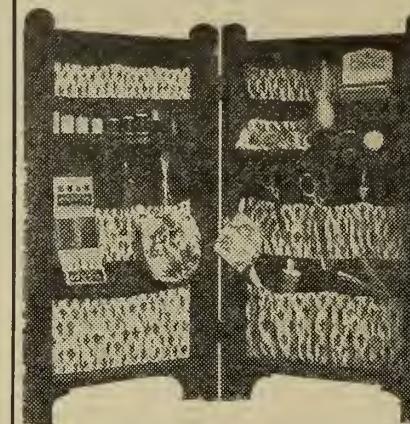

To-day our hearts thrill with life
and hope, and we have each one our
share in the glad new life and beauty
—In the springtime resurrection. We
want all the world to be good and
glad; we went every one to have a part
in the sunshine, a chance for each to
come to his or her own of life and work
and joy. When we look out over the
wide stretching fields and notice how
each plant, be it large or small, beau-
tiful or not beautiful, has yet its place
and room to come to its best of fruit
and seed, when we see how nature
cares for her own, how "Spring shall
plant—and autumn garner to the end
of time," and we know nothing shall
be lost or fail of its purpose, then
turning from nature to man, how it
hurts us to think of the "submerged
lives," myriads of people who are
downtrodden and oppressed and have
small chance to know how good and
beautiful life can be made. Then we
think with joy and gratitude of the
brave men and noble women in all
parts of the world who have given up
their lives, all of their money, time,
and strength for the improvement of
the lives of others, those who have
gone down from life's pleasant places,
out of ease and luxury, that they
might make a light to shine in the
dark places, and so to help the weak
and erring, the sin sick and desolate
to become strong, true, happy, and
useful. We think of beautiful Jane Ad-
dams, who John Burns calls "The only
saint America has produced," but we
know there are others just as earnest
and sincere, just as helpful as she is,
and would do justice to them while
taking nothing from her. We recall
how the "little seed thought," from
which Hull House and all its beautiful
activities, all its helpfulness has
grown, fell into the good soil of her
Soul when she was but six years old,
there to be guarded and nourished until,
"In the fullness of time" it bore
beneficent fruit to which many, not
only of Chicago's poor, but those of
other great cities can bear witness.
The uplifting, virifying influence of
Hull House, and all such houses
spreads like the sunshine into the far
places out and out we know not where,
nor to whom. We only know it is for
good wherever it goes, and we thank
God and take courage for our kind.

Among the most helpful influences
of this kind, where the work done
brings a resurrection of life and all
that makes it worth living—love, hope,
and joy, is the old "Jerry McAuley
Mission," in New York. It is inspiring
only to read of the work being
done there. What must it be to see
it, to share in it, and so to know of
our own observation of the redeemed
lives there? There, under the first
span of the great Brooklyn Bridge on
Water Street, is the mission house that

has been to so many as the open gate
to Heaven, to a life of hope and love
and purity after they have sunk so
low that it seemed almost impossible
they could ever rise again. Once it
was a dive of the lowest kind kept by
Jerry McAuley, who at that time was
styled "the wickedest man in New
York." Some earnest young women
missionaries entered there one day
thirty years ago and asked to be al-
lowed to sing and pray. The permis-
sion was given, and despite the jeers
and ribald jokes cast upon them, they
came again, until in time McAuley felt
the stirrings of better impulses within
him, and yielding to the good that
never wholly dies in any man's soul,
because it is of God and can not die,
he threw off the yoke of his past life,
changed his dive to a mission house,
and worked as earnestly to redeem his
kind as he had before worked to drag
them down. Because he was so thor-
oughly one of them, because he knew
by his own experiences "What strength
must be set against a sin," because he
had felt all the power of temptation,
he knew just how best to meet and
help those who came to him. His
methods and his work were unique, but
it all told mightily for righteousness,
and the lowest and the vilest took
"heart of hope" and struggled slowly
upward and though they fell again and
again many times over, as many times
did he forgive and forget and sought
again to help them. He never let go
of one on whom he had "laid hold," as
he would say. Only recently I have
been reading of Rev. Samuel Hopkins
Hadley, who became McAuley's suc-
cessor and went on with his work af-
ter he was called higher. Of a fine
family directly descended from Jona-
than Edwards, Samuel H. Hadley,
wealthy, educated, and honored, yet
fell a victim to drink, fell to the lowest
depths of degradation. His last penny
was gone, but he was too weak and
unarmed to drag himself to the river
and drown himself, as he had resolved
to do when he should reach this point
in his downward way. He tells us how
while he was sitting in this condition
in a miserable saloon he "suddenly be-
came aware of a great presence" with
him, and under the influence of that
presence he vowed "never to touch an-
other drop of intoxicating liquor," and
to make it possible for him to keep
this vow he "dragged" himself to a
police station and begged to be locked
up for the night. He says "All the
demons in hell were locked in with me
and I fought all night long for my
soul," but the power of the good was
stronger than the power of the evil,
and Hadley kept his vow. Soon after
he was induced "by a fellow sinner" to
go to the mission house on Water
Street. He found it so crowded and
packed with those who, like himself,
were seeking the better way, that he
could hardly make his way to the
front. Men and women of every type
of degradation were there. He knelt
with a crowd of drunkards. Jerry Mc-
Auley's prayer was simple and direct.
"Dear Savior," he said, "won't you look
down in pity upon these poor souls?
They need your help, Lord, they can
not get along without it. Blessed Jesus,
these poor sinners have got them-
selves in a bad hole, won't you help
them out? Speak to them Lord, do, for
Jesus' sake, Amen." Then he told them
to "pray for themselves," and "tell the
Lord what you want Him to do for
you." He put his hand on Hadley's
head and said, "Pray, brother." "I can
not, you pray for me," was the answer.
McAuley showed his wisdom by reply-
ing, "All the prayers in the world won't
help you unless you pray for yourself,"
and "with a breaking heart," Hadley
said, even as a child might say, "Dear
Jesus, can you help me?" "Although
up to that time," he said in telling of
it all afterwards, "my soul had been
filled with unutterable gloom. I felt
I was a free man, that Christ with all
His love power had come into my life.
Oh, the precious feeling of safety, of
freedom, or resting in Jesus!" So he
was saved to himself and to God, saved
to become a mighty power for good
among these lowly people. He never
again wanted whisky, so complete and
radical was the change in him. When
in time McAuley "slept in death," Mr.
Hadley became the head of the mission
and gave all he had, all he was to the
work there. Being richly gifted by na-
ture, of a family of wealth and culture,

F. Mayer Boot & Shoe Co.,
Milwaukee, Wis.

Send for free booklet to-day—it's so easy to
forget it—and please mention Kansas Farmer

ART CRAFT WORKSHOP, 342 Dearborn Street, CHICAGO, ILLINOIS

he might have ranked high in the
world of men and affairs, but dearer
to him than all else was this mission
located there "Where trains banged
and thundered day and night over head,
and all around were the grinding, dis-
cordant noises of machine-shops." He
"would rather live there than in any
other place on earth," he said, and
there he lived and worked until just
recently, when he was called to his re-
ward. Called to his reward I say, but
did he not have his reward daily, hourly
in witnessing the improved lives of
those around him? In seeing them
give up all evil ways and live clean,
strong lives? Each one a help and a
power to incite others to greater ef-
fort and more earnest striving for all
that was good and pure? The mission
was, and is, a place where the lowest
could come in the sure hope of help
and encouragement. No matter how
it is elsewhere, though he may be
watched and distrusted everywhere
else, here he is left perfectly free, here
not a breath of suspicion meets him,
here is no watching, no restraint. He
is met as a brother, given food and
clothing, warmed and cheered and
cared for as by a band of loving broth-
ers. Here Mr. Hadley said, "If a man
cheats me nineteen times, I shame him
out by trusting him the twentieth
time." Here, however often he might
fall, strong hands were never lacking
to help him up, and all the atmosphere
was that of love and trust and help-
fulness. Hadley's faith in human na-
ture was boundless and his spirit as
truly the spirit of Jesus as man's ever
was. His methods were so wise and
so successful that leaders of religious
thought and sociological workers came
from all parts of the world to learn
of him, and oh, how his people, those
for whom he gave him life, how they
loved him. Truly he made the sinful
to become pure, the weak strong, and
the desolate to rejoice. He lived his
creed and made it easy for men to be-
lieve in a God of infinite love and pa-
tience. The grief at his death is great
and sincere. His going has indeed left
a great void there, and though good
men may be plenty, it will be long ere
a leader be found to take his place and
fill it. It is impossible to measure the

Her Majesty's Sewing Cabinet

"Enclosed find check for Sewing Cabinet. It is
fully up to expectation and my wife is greatly
pleased with my purchase." P. M. BUSHNELL,
Cashier, Richland Savings Bank, Mansfield, O.

We receive such letters daily. There are no
disappointments—it pleases them all.

This graceful, handsome piece of furniture
is produced by the hands of careful, pain-
staking craftsmen in our own little workshop.

Each Cabinet is completely equipped with
everything a woman needs to sew with, and
here are fourteen pockets that hold all of her
unfinished work—keeps all the sewing together.
It's a perfect delight—"makes real pleasure
out of real work"—and is just the thing
any Kansas Farmer reader will enjoy.

Write for our free descriptive booklet with
prices for the different styles, and also please
tell us the color scheme of your sewing room
that we may suggest a cabinet that will har-
monize with its furniture, fittings and dec-
orations. We pay the freight.

**Death of Floral Lawn
Cause, Smothered by Dan-
delions**

The dandelion pest has had its day. For one dol-
lar you can get an instrument that can be used by
women and children as well as men that will pull
dandelions and other noxious weeds at the rate of
one thousand an hour, and leave not a drop of dirt
nor a visible tear in the sod. No stooping nor bending
and is a pleasure not a task to operate it; deliv-
ers automatically the weeds pulled, and your
hands are not soiled, nor your back tired, no grunt-
ing nor humping around to do your work. Pulls
any dandelion or weed when tap root does not ex-
ceed 16 inches in length. Send one dollar and we
will deliver free at your door.

The Standard Incubator Co.
PONCA, NEBRASKA

good he has done. We can not number the lives of men and women he has helped. As well might we try to compute the good of the sunshine or count the flowers that each day are hearing the call of the springtime and are lifting glad faces to the glad sky. We only know the good work will go on and on, and generations yet unborn will know and love the names of these earnest men and women who have given themselves in love to the work of bettering human lives, of bringing a beautiful resurrection after the winter of sin has past.

There are others of whom I would tell you, but they must wait until another week, as I would not encroach too much upon the space in the dear old FARMER.

When pa came home the other night he had a happy smile
And said to ma that we would soon be livin' in great style.
Because a man had been around that day to let him in,
Just as a favor, on a thing that couldn't fail to win.
"He'll let me have the stock," says pa,
"at fifty cents a share
If I'll subscribe to-morrow, for there's little left to spare.

"He'll let us in at fifty cents for every share we buy."
Says pa, while ma she didn't seem to hardly bat an eye,
"And in six weeks from now if we've made a mind to let it go
We'll get ten dollars for each share—that's estimated low.
I've seen his papers and they're straight; there ain't a chance to lose—
Say, what's the trouble with you, ma?
You don't seem to enthuse."

"If it's as good as that," says ma, "I can't quite understand
What makes him want to let it go. Of course it would be grand
To get the money, but I'd feel as though it wasn't fair
To rob him, as we would if we should take a single share."
"Confound a woman, anyway," says pa,
"she always seems
To want to wake a person when he's naving pleasant dreams."

—Chicago Record-Herald.

Fleetfoot; the Autobiography of a Pony.
MARION SEWELL.

CHAPTER IX.—BAD MAN'S LANE.

The day after school was out I frisked in the big pasture with the colts, but the following morning Lyall brought me home and turned me loose in the front yard. This gave me a feeling of great importance, for the lawn was a beautiful one, full of flowers and shrubs, and if I was not trusted and esteemed I would not have been put there, because any awkward stumbling or nipping of huds would have proven fatal to the looks of the place.

One time when I was roving happily about quite near the house a prim old lady, who had been spending the afternoon with Mrs. Dearcot, came out of the parlor and seeing me threw up her hands in horror, exclaiming, "Why, you let the horses run in your lovely yard!" Not the horses," smiled Mrs. Dearcot, "only the children's pony. He nips the grass so neatly they sometimes call him their little lawn-mower."

The visitor laughed knowingly and shook her head. "It's all right for a while, but you will forget to watch him by and by and all those flowers which you value so much will be swept out of existence."

"How full of despair you are to-day, Mrs. Brahm," pleasantly rejoined Mrs. Dearcot, as she led her friend out among her plants, and picking a few blossoms from every flowering shrub she soon had a mammoth bouquet which she presented to Mrs. Brahm, who accepted it with many protestations. I began to think that this good woman envied me my place in the midst of so much beauty, and wishing to prove that I bore no ill will, I reached over to smell and admire the bunch of modest violets in her bonnet, but when she felt my warm breath on her neck she gave a smothered scream and walked with agility through the open gate. Then Mrs. Dearcot said, "Why, Pony!" in a reproachful tone, and I turned away and began to graze, being convinced that there were people in this world who could never view things in the right spirit.

Of course, Mrs. Brahm's prejudice had nothing to do with my history; I merely wish to hint that it was a real honor to be allowed several days in the week to roam unfettered and unwatched in the near vicinity of one of the finest dwellings in the neighborhood.

When Lyall was bringing me home from the pasture that morning in June

which I have before referred to, he sang blithely all the way. I knew that some treat was in store for him and was hardly surprised when he told me the particulars.

"I do wish you and Marcella might come also," he began in an assumed voice of apology. "But neither of you would enjoy it much I'm afraid. You see I'm off to Grandpa's, and a lot of us fellows are going to fish, boat-ride, and climb trees, and a whole bushel of other things that you could never learn to do." Here he snickered unnecessarily. "So you'd better stay at home and enjoy a quiet life," he added gaily as he stroked my neck. I didn't want to go, and Lyall did not need to get funny because I was left behind, but then the lad was so happy that I suppose he hardly knew what he was saying. After some more talk about Grandpa's shady trees, tender grass, and juicy apples, Master Dearcot pinched my chin and started off to be on hand for his train.

The time passed quickly, and a little while before the regular noon hour Marcella's head appeared above the little blue gate, and I knew from the way she called me that my dinner was ready. I hurried and we both went to the wood-shed where my meal of oats, corn, hay, and apples was awaiting me. A pail of cold water was there also, and while I drank Marcella ate one of my apples.

It must have been one o'clock when Daisy Floyd came. Marcella had been trying to do fancy-work, but I could see that although she held her needle gracefully in her hand, her eyes roved over the hills and far away. Yet who could work on a day like that? I'm sure I could not, and of course Marcella shared my feelings. The sky was too blue, the air too warm, the songs of the birds too piercingly sweet to allow joyous youth to take up a task and finish it. Even the bees with their reputation of always being busy seemed to do nothing but hum, and so long did they keep it up that I grew drowsy, and all the energy which I possessed deserted me.

Marcella suddenly dropping her work clapped her hands and exclaimed, "Hurrah!" Looking up I saw Daisy Floyd coming into the yard.

"Hurrah yourself," she responded, as she tripped up the steps.

"I was so afraid you wouldn't come," said my little mistress, "and I see you've brought your box."

"I have," returned the small maid, "and where is your box?"

"It's ready. Everything is all fixed but Pony, and I can harness him in a minute." My heart sank. This, then, was my dream of idleness in the shade; but since Marcella wished it I could run the risk of getting overheated.

We started down the road and I was willing to show my best paces, but Marcella encouraged me to take my time and I did. Meanwhile, I could not help overhearing the conversation of the two lassies behind me.

"I am going to have a party before long," announced Daisy triumphantly.

"Oh splendid!" cried Marcella, and in her excitement she gave a tweak at the lines.

"It is to be a wild-flower social," continued Daisy. "I thought it out a long time ago."

"Will the invitations be printed?" asked Marcella in an awed tone.

"They'll be typewritten. Cousin Gilbert has a typewriter, you know, and he has promised to do my work." Daisy made this statement with such an air of importance that I nearly stepped off an old bridge, so greatly was I amused.

"There's one now!"

"Where?"

"Right up against the fence." And with this startling announcement both girls tumbled out of the buggy, and bringing two small wooden boxes, fell to work digging at the roots of a dyspeptic-looking plant.

In a short time, but not before the botanists were perspiring freely, the roots began to show themselves, and the next moment they were receiving a vigorous shaking to remove all traces of soil.

"Won't Miss Benton be surprised?" queried Daisy repeatedly, but Marcella seemed to have lost confidence.

"I'm so 'fraid," said she, "that they are not the right kind. Miss Benton showed us some the other day, and they were worlds thicker than these. These are so thready."

"Pshaw!" exclaimed Daisy. "They'll press out the same as those Miss Benton had. Very likely what we found are young."

"I hope so," returned Marcella, as they again climbed into the buggy.

"Every one that comes to my party

LOWELL INGRAIN CARPETS

"The all wool kind"

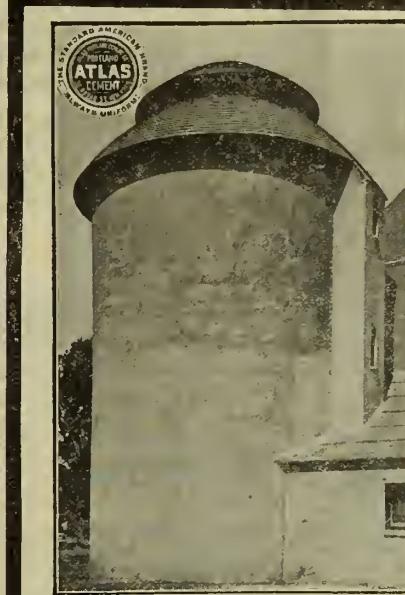

We have been telling you for weeks WHY you ought to insist upon getting a LOWELL INGRAIN the all wool kind—when you buy a carpet. Thousands have taken our advice and are highly pleased

ISN'T IT TIME FOR YOU TO CONSIDER BUYING

Remember these points: Cover the whole floor—it's warmer, and easier to take care of; can be used on both sides, a great saving. LOWELL INGRAINS are made that way; can be had in newest styles and colors, just like high grade carpets. If it is wound on a hollow stick, it's a genuine LOWELL INGRAIN.

When you buy carpets, ask the local dealer for LOWELL INGRAINS. Look for the hollow stick and run no risk. Don't accept any other.

must be a wild flower," Daisy remarked as if there had been no interruption. "and I'm going to invite the whole school except the Howler girls. They stay at home."

"Oh Daisy! why would you do that?" I could easily imagine Marcella's shocked face as she asked the question.

"A dozen reasons," responded Daisy in an impressive voice that caused me to stumble, being so interested and amused. Then she went on: "They are not very rich, nor very smart, nor in the least pretty, and they have such horrid names, and I'm not going to invite them. So there!"

Marcella unsteadily pulled one line and then the other, and as I did not know where to go I started down a narrow side lane.

"Daisy Floyd," she said with a quaver in her voice, "I never knew you were so mean. I'm sure, though, your mama will make you invite Hester and Georgie and Prissy. Hester beats you and me in geography, and you all to pieces in arithmetic, and that's why you want to slight 'em."

For a little while there was no response; then Daisy gave a guilty snicker. "Cousin Gilbert would think I was crazy if I asked him to write me an invitation to Hester Howler," she said.

"Oh, it's all right, Miss Floyd," returned my little mistress, and added provokingly, "What does j-c-a-l-o-u-s spell?"

A sound of smothered sobs came faintly to my ears. Then a shrill little voice piped up. "Marcella Dearcot, you have no right to dickstate to me. Mama said I could do as I pleased about the party, and now I'm going to walk all the way back home."

No sooner had this direful threat been made than Marcella gave a frightened scream. "Oh, see!" she cried, "we've taken the wrong road and are half-way down 'Bad Man's Lane.'"

"Such a driver!" exclaimed Daisy, in a tone of mingled disgust and fear.

"It's not my fault," declared Marcella, "the bad fairies turned Pony this way because you were so mean about the Howler girls. We'll be murdered to death, for the lane is so narrow we must keep on forever."

When my little mistress started out with, "It's not my fault," Daisy began to advance a contradiction, but at the mention of fairies, in the existence of which she was a firm believer, she was silenced for awhile and her next remark showed the humble state of her mind.

"I don't think anybody lives here at all, Marcella. I believe they call it 'Bad Man's Lane' because there are so many stumps and hills and the road is so fearful rough, just like this, bump, bump, bump."

"Maybe that's it," returned Marcella, "but I've heard folks tell how there's a man who lives all by himself at the end of the lane, and he steals and fights and does everything that's awful. They say he hides in the woods sometimes so he won't be caught and punished."

Affected by the stirring tale, I trotted on briskly over the wretched road, hoping in a blind fashion to outrun possible danger.

"I wish we could turn," complained Daisy after a period of silence. "Surely the lane will get wider after awhile." Almost as she spoke I was forced to come to a standstill, having suddenly encountered a wide, green bank which stretched across the middle of the road.

A great many yards above us perched on a hill was a little black house with one tiny window and a sagging door, through which was emerging a wild-looking man, the sight of whom made me catch my breath in fear. His clothes were old and torn, his black hair long and uncombed, and as he put his hand over his eyes and peered across the neighboring treetops, I felt that he was planning, or had just completed some horrible crime. A little spotted dog came running out and stood beside. The fact that the dog had neither ears nor tail was a final proof of the man's cruelty.

The sharp eyes of the small terrier spied us almost at once, and with excited yelps came bounding towards us. Half-way down the hill he lost his footing and fell headlong over the steep embankment, at the bottom of which he lay and howled out his fright and pain.

The "bad man," not knowing of our presence nor casting a glance in our direction, hurried to the prostrate dog, and gathering the miserable creature up in his arms began soothing and pitying it with all his might.

"Master will fix it up with salve," he assured it over and over again, and then all at once he saw us. With the dog (now whimpering with pleasure) still in his arms he came toward us,

I was sitting on the steps in the twilight, waiting for Ruth and Helen to come. They had gone for a walk before dark.

The Backbone of a Mighty Nation

is good food—food for brain, food for brawn, food that is strengthening, that gives energy and courage. Without a proper appreciation of this great fundamental truth no nation can rise to greatness.

As an article of food, soda crackers are being used more and more every day, as is attested by the sale of nearly 400,000,000 packages of **Uneeda Biscuit**, which have come to be recognized as the most perfect soda cracker the world has ever known.

And so **Uneeda Biscuit** will soon be on every table at every meal, giving life, health and strength to the American people, thus in very truth becoming the backbone of the nation.

NATIONAL BISCUIT COMPANY

Marcella and Daisy could stand no more, and neither being willing to await her turn, both jumped out of the buggy at the same time and with quaking voices began to implore mercy. The "bad man" with much surprise pictured in his peculiar countenance, took hold of my bridle and without a great deal of difficulty turned the whole outfit in a homeward direction. Then as the little girls climbed to their seats he delivered himself of the following, in a singsong voice:

"Little daughters do not fear,
I would not harm you in a hundred
year.
My life is but"—

I heard no more, for I was now going at my fastest gait, and in a wonderfully short time was clear of the lane and out on the wide, smooth road.

We met some people in a carriage and they seemed greatly distressed on our account. "A runaway!" exclaimed a benevolent old lady, and as I dashed past them I heard pitying murmurings about "two poor little children."

The girls did not enter into conversation until I had slowed up some and we were going through the back gate at home.

"I don't think he was so bad, after all," remarked Marcella, reflectively.

"Why?" asked Daisy, who was always on the search for reasons.

"Because he was so good to his little dog."

"Yes," assented Daisy, "and he was good to us, too."

The Little Ones

A Grown-Up Girl.

I've grown to be a great big girl,
My hair is in a braid,
Tho' mama says 'twill take the curl
All out, she is afraid.

And nowadays I dress myself
And that is lots of fun.
And spread my little nightie out
And air it in the sun.

I tug and pull my stockings on,
And then you ought to see
My little 'lastics open wide
As if to bite at me.

They stick their little shining teeth
Into the stocking top
And nip it so it can not slip
For all I jump and hop.

My petticoats are pretty hard
(They button in the back).
Then comes my little morning dress
And, when it's cool, a sack.

And so it's plain how big I am
And how it makes me cross
To have my grown-up brother, Sam,
Say, "Here's our little Floss."

—Rose Warren Campbell, in Good Housekeeping.

The Bungler.

MRS. A. D. GRAY.

I was sitting on the steps in the twilight, waiting for Ruth and Helen to come. They had gone for a walk before dark.

"I think we need a walk to rest us, mother," said Ruth. "Besides, we might meet that bug I told you about. You can't seem to think what it is, and I certainly thought you knew every single bug."

"Well, I'm sorry, my dear; but when you say that it has six legs and two eyes, and can tell me so little else about it, the description would do for hundreds of other bugs. You must learn to be more observing."

"I said it banged right into my face, and kept on banging around. And, oh, now I remember more—it has heavy wings on top and thin, fine ones under them."

"You did look closely, only you forgot to tell me all you saw. Go for the walk now, and when you come back I will tell you about it."

Presently they came running, breathless and eager.

"Isn't it funny, mother? When we got most here, this same old bug banged into Helen's face. I shoved him off, and he came again, and then tumbled right onto the ground. I put my handkerchief over him quick, and he's there now! A boy going by said he was a 'June-bug' but it's only May now. Shall I open the handkerchief? Are you 'fraid?"

"Not the least little bit," I said. "He is quite harmless now. But, oh my, he wasn't a few weeks ago."

"Why, what did he do?" asked Helen.

"To begin with," I said, "'June-bug' isn't his real name at all, though most people call him that. He is a May insect, for he comes the last of April or first of May. Don't you remember the beetles I told you about, and how before they became beetles they were white baby grub-worms? There are over sixty varieties of his family, differing a little from each other."

"Goodness!" said Ruth, "Sixty relations?"

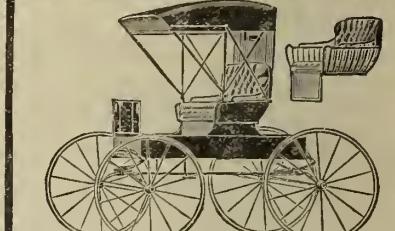

"Oh, as for relations," I said, "there are about 70,000 beetles of various kinds—it's a big family. This one belongs to that family that digs down and cuts off strawberry roots and the green, tender roots of grass. That's when he is a white grub, you know, before his wings and legs grow. He hunts the richest earth and is often found when boys are digging fish-worms. When he becomes a beetle his name is the 'Bungler' or 'May-beetle.' 'June-bug' is only a nickname."

"Under these thick, dark upper wings are two fine gauze wings, folded like a fan. They are a lighter brown. He goes banging around into people's faces, and seems to have no idea of flying, as some insects do."

"Perhaps he's blind like that May-fly," said Helen. "No, here are his eyes; he can see, I am sure."

"The banging about is only one of his habits, caused not from poor sight, but from a weakness of the wings, which makes it hard for him to alter his course quickly, and causes him to strike any object in his way, instead of avoiding it."

"And so people are making a mistake

CHEAPER FARM LAND

SOUTHWEST OFFERS BEST OPPORTUNITIES FOR SECURING HOMES

Many farmers in the Northern and Eastern States are selling their high priced lands and locating in the Southwest. Many who have been unable to own their homes in the older country are buying land in the new country.

Unusual opportunities exist along the lines of the Missouri Pacific-Iron Mountain Route. The rich, alluvial, delta lands and river bottom lands of Southeast Missouri, Eastern Arkansas, Louisiana, and Texas, capable of producing 60 bushels of corn, 4 to 6 tons of alfalfa, 150 bushels of potatoes, and other grains, vegetables and hay crops, can be bought for \$7.50 @ \$15 per acre. When cleared and slightly improved will rent for \$4 @ \$6 per acre cash.

Uplands more rolling, lighter soil, adapted to fruit-growing—peaches, pears, plums, grapes, berries—also melons, tomatoes, and other vegetables, can be bought for \$5 @ \$10 per acre in unimproved state. Many places with small clearings and some improvements can be bought very cheap.

This is a fine stock country. No long winter feeding. Free range, pure water, mild climate. A healthy, growing country, with a great future.

Write for map and descriptive literature on Missouri, Arkansas, Louisiana, Texas, Kansas, or Indian Territory. Very cheap rates on first and third Tuesdays of each month.

MISCELLANEOUS PROGRAM.

Immigrants to the United States.

Roll call.

I. The arrival and inspection of the immigrants.

II. Their effect on our country.

III. The problem of educating the children of the immigrants.

I. The immigrants are pouring into our country by the thousands every day. On one day a few weeks ago over eighteen thousand entered the New York harbor. All of these had to be closely examined to see that no insane person, idiot, or pauper, or any one with any contagious disease should come into our country. The immigrants are all examined at one office on Ellis Island which is not adequate for examining more than five thousand a day, and when the number exceeds this the homeseekers have to remain on the ship until the officers can inspect them. Many humorous and pathetic stories about these poor homeless people are current, and if the writer of this paper knows any, they will liven up her article.

II. The next subject is one which is being discussed widely and earnestly. A great influx of people, such as come into our harbors daily, can not but have its effect. Many think that as these people have a lower standard of

U.M.C.

METALLIC CARTRIDGES

If you are a good shot you deserve U.M.C. cartridges—if you are a poor shot, you need them. They are wonderfully accurate and always reliable.

U.M.C. cartridges are guaranteed, also standard arms when U.M.C. cartridges are used as specified on labels.

THE UNION METALLIC CARTRIDGE COMPANY
BRIDGEPORT, CONN.
Agents—13 Broadway, New York

Mrs. GEORGE W. TINCHER,
Secretary West Side Forestry Club

living than our working people, and so will work for less wages, the result will be a lowering of the American standard of living. Another fear is that they will undermine the strength of our nation, for they soon acquire as much power by vote as any educated and thoughtful citizen. This topic is a much used but none the less interesting question for debate, and if two or four members would write on it, half taking the negative and half the affirmative, more points would probably be brought out and it would lend variety to the program.

III. The problem of educating the children of these immigrants is a puzzling one. The parents, as a rule, do not wish their children to attend school, but prefer that they should either beg or work, and both parents and children rebel against the truant law. When they are thus forced into the school from families where self-control and honor are seldom taught, they make it hard for the teacher. Having so many different nationalities under one instructor adds to the difficulties. Material for this program is so plentiful in magazines and papers that the writers should have no difficulty in preparing interesting and instructive papers.

Forestry Club's Visit to Manhattan.

The West Side Forestry Club had a very delightful visit on Thursday, April 26, to the State Agricultural College at Manhattan, Kans. The club has been planning for this trip for some time, and the members who were unable to attend missed one of the most instructive meetings since its organization.

About eighteen of the club members went up on an early morning Union Pacific train. The trip of fifty miles up the Kansas River valley along which the orchards were in full bloom will be long remembered. The visitors were met at the station in Manhattan by a number of the faculty of the college, also by women from the Domestic Science and Tuesday Afternoon Clubs, of Manhattan, who assisted in entertaining them during the day. Carriages were furnished by the Commercial Club, which were at the disposal of the visitors all day. The first point of interest was the Domestic Science building where specimens of the year's work in the sewing department were seen. Later, the visitors were shown the kitchen, where the senior girls were preparing luncheon, most of the cooking being done by electricity. President E. R. Nichols and wife and Prof. E. A. Popenoe, together with other members of the faculty, entertained them at luncheon, which was daintily served by the girls of the senior class. Many of the guests said they never saw a luncheon more artistically served. This was a compliment to Prof. Henrietta Calvin, the instructress. Several departments were visited. In the forestry classroom Professor Popenoe, of the forestry department, explained to them about the original plans of the college campus. These plans were the work of Mr. Currey, of St. Louis. It has been the practice of the faculty to carry out the ideas of the original plan, so far as is practicable, in all later improvements and additions. Prof. Albert Dickens, of the horticultural department, then conducted the ladies in a walk through the campus, showing them the different trees and shrubs, explaining their habits, secrets of their culture, etc. The walk continued through the orchard where the trees were in blossom. One of the most beautiful spots on the campus was the long hedges of lilacs, which were in full bloom. The Professor invited the ladies to help themselves, an opportunity which they accepted.

The carriages called for them after their jaunt and they visited the stockyards, where they saw horses, cattle, sheep, hogs, and chickens of the finest breeds. Then they were taken to the large greenhouse where each lady was presented with a carnation. From there they went to the college library and museum, Science Hall, and other buildings. This concluded the afternoon visit to the college. Then the visitors were taken back to Manhattan, where an invitation was extended to them by E. H. Greely, Mrs. J. T. Willard, of the Domestic Science Club, Mr. F. W. McGarrett, and Mrs. O. H. Halstead, of the Tuesday Afternoon Club, to visit the Carnegie Library, where they spent the remaining hour of the day before returning to their homes. The invitation was extended to the West Side Forestry Club by the college faculty, because of its interest in forestry and gardening.

Nickel dash rail, hand rail and lazy back rail. Send for Big Free Catalogue of Vehicles and Harness in colors. A buggy factory selling direct must pay off all their expenses, salaries, etc., out of a few thousand buggies. Our expenses are all paid out of our agricultural implement factory. A buggy factory would starve to death on the small profit we get on a buggy. Write us before buying. The only plow factory in the world selling direct to the consumer at wholesale prices.

HAPGOOD PLOW COMPANY, 804 FRONT ST., ALTON, ILL.

Insure Your Crops Early With

The Grain Growers Hail Insurance Co.

Of Topeka, Kansas.

The cost is the same whether you take out hail insurance early or late in the season. Why not let our agent write it early and take advantage of all the protection your premium will pay for? Hail Insurance is more of a necessity than fire insurance; by being very careful you may avoid a fire, but you cannot be careful enough to avoid a hail storm when it comes your way. In twenty minutes you may have the work and care of months destroyed. In 1905 the farmers of Kansas lost over sixty times as much by hail as they did by fire.

This is the only hail company in Kansas whose applications take effect as soon as you settle with the agent.

This is the only hail company in Kansas that does not ask the farmer to pay five per cent of his own loss.

This is the only hail company in Kansas that adjusts all legitimate claims, no matter how small. Since the cash hail line went into effect.

ALL POLICIES GUARANTEED BY LEGAL RESERVE.

OFFICERS UNDER \$50,000 BOND TO THE STATE OF KANSAS.

Methods always open for inspection. Rates low. Write Home Office, Columbian Building, Topeka, Kan., for particulars regarding our new plan.

Farmers and Insurance Men Wanted All Over the State as Agents.

JUST ISSUED

Farm Grasses of the United States

By W. J. SPILLMAN

Agrostologist, U. S. Department of Agriculture

An intensely practical discussion of the farm grasses of the United States of America is presented in this volume. It is essentially a resume of the experience of American farmers with grass, and it is safe to say that no other work has covered the ground so thoroughly. No attempt has been made to give a connected account of all the grasses known in this country, but the aim has been rather to give just the information which a farmer wants about all those grasses that have an actual standing on American farms. The whole subject is considered entirely from the standpoint of the farmer. One of the most valuable features of the book is the maps showing, at a glance, the distribution of every important grass in the United States; and the reasons for the peculiarities in this distribution are fully brought out. The principal chapters treat on the grass crop as a whole and the relation of grass culture to agricultural prosperity, meadows and pastures, the seed and its impurities; the bluegrass; millets; southern grasses; redtop and orchard grass; bromo grasses; grasses for special conditions; haying machinery and implements; insects and fungi injurious to grasses, etc., etc. The methods followed on some pre-eminently successful farms are described in detail, and their application in grass lands throughout the country is discussed. The discussion of each grass is proportional to its importance on American farms.

This book represents the judgment of a farmer of long experience and wide observations regarding the plan in agriculture of every grass of any importance in American farming. In its preparation it was used as a text book in schools as well as a manual of reference for the actual farmer has constantly been kept in mind. The book is most conveniently arranged and splendidly indexed, so that the reader may find any subject at a glance.

KANSAS

Kansas Politics.

(Continued from page 506.)

lation, extent of territory, wealth, and intelligent citizenship, these Territories abundantly meet all the requirements of Statehood. Every consideration of justice towards the 1,500,000 people residing within their boundaries demands the immediate admission of the Territories into the Union. We hereby request all our Representatives in the Congress of the United States to use their best efforts to accomplish this much-desired result at the present session of Congress.

The foundation of good Government is the will of the majority, fairly expressed and honestly recorded. To that end the selection of a candidate is as important as his election and the primaries should be as sacred as the polls. We demand that every safeguard that now surrounds the general election shall be established for the primaries where candidates are selected, and such additional provisions as shall preserve to each party control by its own members, freedom of choice, and an honest record of the results.

Whereas, the Supreme Court of the State of Kansas, and the Supreme Court of the United States have held the anti-trust laws of Kansas constitutional, and said laws have been demonstrated to be efficient for the punishment of offenses, we demand that said laws shall be rigorously enforced by the Attorney General and every county attorney of this State, and we demand that the Legislature shall make liberal and sufficient appropriations to conduct investigations and prosecutions against all trusts and combinations in restraint of trade, to the end that such unlawful combination may receive such exposure, prosecution, and punishment as their enormities deserve. The Republican party stands for the supremacy of law and demands of the executive, prosecuting, and police officers the rigid enforcement of all laws, regardless of personal opinions as to their wisdom or expediency."

THE DEMOCRATIC NOMINATIONS.

Governor—Wm. A. Harris, Leavenworth County.

Lieutenant Governor—Hugh P. Farrelly, Neosho County.

Secretary of State—Hugh C. Ahlbom, Smith County.

State Auditor—W. F. Bowman, Atchison County.

State Treasurer—Patrick Gorman, Bourbon County.

Attorney General—David Overmyer, Shawnee County.

State Superintendent of Public Instruction—A. B. Carney, Cloud County. Railroad Commissioners—Harry McMillan, Ottawa County; C. A. Cooper, Rice County; Jas. Humphrey, Geary County.

Insurance Commissioner—J. W. Morphew, Russell County.

State Printer—W. F. Feder, Barton County.

Associate Justices (for six-year term)—A. M. Jackson, Cowley County; D. M. Dale, Sedgwick County; (for four-year term)—W. S. Glass, Marshall County; Lorenz Hawn, Leavenworth County.

THE DEMOCRATIC PLATFORM.

We indorse and reaffirm the Democratic National platforms of 1896, 1900, and 1904, as presenting in unbroken succession the principles of the Democratic party of the United States.

We adhere to the great Democratic doctrine of equal rights for all and special privileges for none, and we once more declare that the true end of all good government is the greatest good to the greatest number.

Cherishing the Constitution as the supreme law, we declare that wherever

that immortal document declares or suggests the policy of our Government, we make it our guide. We stand for constitutional money, for constitutional taxation, for constitutional control of interstate and foreign commerce, and for a constitutional foreign policy; at the same time favoring all such changes in the Constitution as may from time to time become necessary for the protection and preservation of the rights of the people.

Time and events have justified every contention and fulfilled every prophecy of the Democratic party.

We congratulate the Democratic party and the country upon the triumphant vindication of the quantitative theory of finance, a Democratic doctrine; and urge upon the benefits of an expanded currency, a Democratic demand.

We remind the public of the fact that the late President McKinley was preparing to abandon, if he had not actually abandoned, the extreme doctrine of protection; that the present occupant of the White House has made so much progress in the knowledge of the truth as to declare that "the tariff is not sacred," and that the most intellectual and conscientious elements of the Republican party now agree with the Democracy that the tariff is a shelter for trusts, enabling the tariff barons to collect enormous tribute from the American people, while selling the same wares to foreigners at a much lower rate it gives the lie to the pretense that such protection is necessary, and constitutes a crime against the American people. We, therefore, renew our oft-repeated demand that all tariff legislation be restricted to laying duties for revenue only.

Railways are public highways. Railway companies are common carriers and public servants. They are given franchises and great powers, with the implied agreement on their part that they will serve the public impartially for just compensation. This they should be required by law and compelled by public authority to do.

We declare that we are not enemies, but friends, of the railroad companies. We are proud of their efficiency as mediums of transportation, and rejoice in their mechanical and scientific development, and their improved facilities for the transportation of persons and property; and we pledge ourselves to defend their every right and redress their every wrong. Yet, we can not shut our eyes to plain facts nor submit to the rules of the State and Nation by railroad influence. We, therefore, demand of the Board of Railroad Commissioners an honest and earnest enforcement of all provisions of existing laws against rebates and all manner of discriminations; and of the Legislature, intelligent, fair supplementary legislation to the end that both the railroads and the public may have justice.

Of all the evils of railroad discrimination, none are so insidious, so constant, and so powerful for evil as the free and complimentary pass. It muzzles the press, silences discussion, stifles and perverts legislation, corrupts justice, dominates and directs public conventional opinion, determines business and social success, and, in a great measure, controls public affairs. In principle, it is as unjust as unequal taxation, and in practice, much more unjust; and it is affiliated with every other economic evil of the age. It is estimated that more than one-third of the passenger mileage upon railroads in Kansas is now free, so that at the rate of 3 cents per mile the railroads now realize upon their total mileage less than 2 cents per mile. We, therefore, demand the immediate abolition of the free pass, and all other like devices, and the establishment of a passenger rate of 2 cents per mile for adults, with proportionate reductions for children, as now.

The subject of the trusts has become stale, but these criminal combinations are not only still with us, but they rule the markets as with a rod of iron. The price of every staple is arbitrarily fixed in utter defiance of the law of the land. And this will go on until the prisons that are yawning for the high-grown scoundrels, who manage the trusts, are filled with them and they are arrayed in the branded garb of felons.

To every honorably discharged sailor and soldier of the Republic we owe a debt of gratitude which we can never repay. They, especially the survivors of the great Civil War, were promised honors and offices, lands, bounties, and pensions; and it behoves a patriotic and honorable people to faithfully perform the pledges made. And as the remorseless reaper thins their ranks and their influence in affairs is dimin-

ished, the obligation resting upon us is increased. We pledge the candidates on the Democratic ticket a rigid enforcement of the old soldier preference law.

Prohibition in Kansas has reached the stage of chronic malady. For years the Republican politicians have dealt deceitfully with the people respecting this question. The party, being hopelessly divided along the line that divides wet from dry, and realizing that the votes of both factions are necessary to constitute a partisan majority, they have deliberately attempted to fool, and have generally succeeded in fooling both; putting wet candidates on dry platforms, assuring the drys that the law would be vigorously enforced, while whispering and winking at the wets, supplying and plying them with free liquors on the eve of elections, and wholly ceasing to prosecute on the near approach of elections, making spasmodic spurts of prosecution between elections, and at all times extending immunity to favorites in the liquor trade, thus playing fast and loose and blowing hot and cold; each faction being made to believe that it was getting the best of the other in this game of duplicity, hypocrisy, falsehood, and deception, and each joining hands with the other until the political union for base partisan purposes of the wet with the dry, of the saint with the sinner, of the temperance-howler with the liquor-seller, of "the puritan" with the black-leg, has become a fixed condition against which it is impossible for honest men longer to contend.

It was in the year 1883 and under the first Democratic administration this State has ever had, that of Hon. George W. Glick, that the law was enacted reducing passenger fares on railroads to a maximum of 3 cents per mile, and the first railroad commission was then created by law, and we pledge our candidates for Railroad Commissioners to take such action as may be warranted by existing conditions. In these days of corporate encroachment and of evasion and defiance of the law by the laws' corporate creations, we deem it wise to make plain the attitude of democracy towards this situation by declaring that we are, as our party has always been, in favor of the enforcement of all laws, particularly those enactments passed to circumscribe and control the exercise of corporate power, and for such new legislation as may be necessary to make such the supremacy of the people's law over all its subjects, both natural and artificial.

We make no war upon material prosperity nor the beneficiaries thereof, so long as they recognize the dominion of the people's Government, but we do declare for the rigid, rigorous, faithful, and efficient exercise of Governmental powers to the end that the dominion of the mighty over the many shall cease, and that the feeble as well as the forceful, the poor as well as the powerful, shall be equal before the law.

We declare in favor of the initiative and referendum to the end that local self-government may be realized and the Government brought close to the people in all matters of importance.

Wherever there is a gross disparity between the assessed taxable valuations of railroad, telephone, and telegraph properties and private properties, we specifically insist upon the property of railroads, telephones, and telegraph corporations in Kansas paying its fair proportion of the burden of public expenses.

We insist that it is not only the duty of the individual, but of the official as well to obey the law. We demand the enforcement of all laws, not only those prohibiting the sale of intoxicating liquors, but the law making it a felony to commit larceny from the State Treasury and all other laws on the State statute books, and we demand that the law requiring the Governor to inspect and count the funds in the State Treasury, and report its condition, be complied with.

At the State Agricultural College.

Professor Eyer, of the electrical engineering department of the Kansas State Agricultural College, is making a test of gasoline engines to determine their availability for electric lighting as well as various mechanical purposes of the farm or business establishments. In a recent test a two-horsepower engine ran eighteen electric lights for ten hours without any attention.

Over twenty varieties of corn are being planted at the Hays Branch Experiment Station this year with a view to finding the varieties best adapted for Western Kansas. It is felt that with more care in selecting for seed, and with better cultivation, it will be possible to greatly improve the corn crops in the western part of the State, not

Buy Dodd & Struthers' Lightning Rods

HERE has been a good deal of discussion as to the real merits of a Lightning Rod, and authorities have all decided that Dodd & Struthers' Pure Copper Cable Rod would absolutely protect any building upon which it is placed in a scientific manner, and they have agreed that the system of placing the rods on has as much to do with the efficiency of the rod as does the rod itself.

This fact partly accounts for the phenomenal growth of our business in the last few years, as the system we are using is given a great deal of thought. Professor Dodd, who is known throughout the entire country, gives his entire attention to the scientific part of our Lightning Rod business. He gives each of our salesmen instructions in properly rodding buildings. These salesmen in turn instruct our local dealers, so that in buying a Lightning Rod of one of our authorized agents you run absolutely no risk, as each man is schooled in the business and is thoroughly competent to put on Lightning Rods before we allow him to issue our guarantee.

By this guarantee we mean that when he rods your buildings our agent furnishes you a written agreement whereby we say that if you ever have a dollar's worth of damage to your buildings while our rods are on them that we will refund you the money paid for the rods or make good the damage.

Professor Dodd has appeared before every National Mutual Fire Insurance Convention for the last six years and has received many endorsements from them, recommending the firm of Dodd & Struthers and their Pure Copper Cable Lightning Rod.

No other Lightning Rod Firm has the backing of the farm papers like Dodd & Struthers.

At the World's Fair at St. Louis the superior jury awarded Dodd & Struthers the Highest Award, where our rods were in competition with those from five different nations.

There are many imitations of Dodd & Struthers' Rods on the market. Many little concerns are bobbing up trying to sell a cable that looks like the genuine Dodd & Struthers, but as a rule people can not be fooled. They will not accept the substitute, as they know the genuine article is better than any substitute made.

When you are considering the Lightning Rod Proposition, be sure that you have read our booklet, "Laws and Nature of Lightning, and How to Control It," before you decide the matter. If you do not have one of these booklets, write us and we will mail it to you free of charge. When you buy a Lightning Rod be sure the spool is marked with our registered trade mark, D. & S., and the man who puts them on for you has our agent's certificate, and also be sure that you get a guarantee when the job is finished.

Do not accept a substitute.

Meet me this paper.

THE KANSAS FARMER

meeting the yields of Eastern Kansas, but getting enough to make it profitable to have a small acreage of early-maturing corn.

Only thirty-six Kansas counties have not had farmers' institutes this year. The Agricultural College will be glad to aid in reducing this number. Requests have come from many of these counties, but it has not been possible to reach them all this year. The counties in which institutes have not been held this year are: Geary, Wabaunsee, Wyandotte, Woodson, Neosho, Montgomery, Wilson, Chautauqua, Sedgewick, Barber, Pratt, Stafford, Barton, Kiowa, Comanche, Pawnee, Hodgeman, Ford, Clark, Meade, Gray, Lane, Finney, Haskell, Seward, Stevens, Grant, Kearny, Hamilton, Stanton, Morton, Rawlins, Cheyenne, Thomas, and Sherman.

Prof. E. A. Popenoe has begun to plan an energetic campaign against the San Jose scale, found recently on many fruit-trees in and around Dodge City. The Agricultural College and Experiment Station Council has authorized Professor Popenoe to give great attention to the trees about Dodge City, and also to visit many other localities in the State to see if this most dangerous pest is at work elsewhere. He will go to Dodge City next week with spraying machinery and materials to see if comparatively mild remedies will succeed in killing the young scale now appearing, without injuring the trees. More drastic remedies will have to be applied next winter when the leaves are off. When trees are badly infested he recommends cutting the trees down and burning them, root and branch.

The Kansas Agricultural College and Summer Picnics.

The college believes in summer picnics, and has for many years been responding favorably to most calls made upon it for speakers for picnics, summer institutes, old settlers' meetings, etc. Much of the service contributed by the college has been helpful to the cause of agriculture, but for the most part it has had little value because the educational and the amusement features were not kept distinct and separate, the amusements taking the whole time and rendering public speaking almost impossible and valueless because not heard. When institutes are held in the fall or winter, there is not much need of combining the institute and picnic unless special effort be made to reach the young people.

This year, therefore, the college will be disposed to decline invitations to send speakers to summer meetings unless the educational and amusement features be treated exactly alike. It does not tend to raise the dignity of agriculture in the minds of young people to let the merry-go-round and striking-machine and the lemonade-sellers work in opposition to a lecture on agriculture. Don't cut out the amusement feature by any means. The college believes in picnics for the young people with lots of fun, but it also believes that the young people ought to hear lectures on scientific agriculture. Give each its own share of time, and make contracts with all who furnish amusements and refreshments with a definite understanding as to their share of the time.

Let these features begin as early as the managers desire, but have them stop absolutely from 10:30 to 11:30 a. m. for the educational program. Then they should have all the time from 11:30 to 2:30, when they should stop again for one hour. The young people, and the old folks too, are thus given ample time for the social side of the day, and all should be urged to attend the lectures. Then the speakers, whether from the college or elsewhere, should prepare lectures that would interest the young people in life on the farm. The managers of these picnics usually fail to have enough seats for the crowd. They say, "The people won't sit down to listen to a lecture." Then don't have a lecture. But if you do have a lecture, prepare enough seats and make it possible for the lecturer to be heard, and assume that all your people want to hear and then insist on good order. Then be prompt. Treat the amusement managers and the young people fairly, and begin the educational part of your program exactly on time, giving five minutes' warning by proclamation. Dismiss this part of the program on time even if you have to ask the field-marshall to arrest the speaker and take him off the platform.

The college is willing to help, but the picnic people should give the cause of agriculture its proper place and a "square deal." Correspondence re-

tive to all summer meetings is now in order. J. H. MILLER, Field Sec., Kansas State Agricultural College, Manhattan, Kans., April 30, 1906.

The Agricultural College Y. M. C. A. Building Fund.

The following letter was received by General Secretary McLean recently:

"Mr. W. W. McLean,
General Secretary, Y. M. C. A.,
Manhattan, Kans."

"Dear Mr. McLean:—Your favor referring to the Y. M. C. A. at the Agricultural College duly received. I take pleasure in handing you, herewith, my personal check for \$100 on this account. I regard the Y. M. C. A. as one of the greatest and most valuable institutions that has ever been organized in the interests of the young men of our State and Nation. It improves the mental, moral, spiritual, and physical condition of men, and reaches all classes. I have never been associated in any way with any work which was so interesting and attractive to me as the Y. M. C. A. Yours very respectfully,

W. R. STUBBS."

Hail Insurance.

If you raise any kind of small grain you are probably interested in having it protected from hail by some good company. The Grain Growers' Hail Insurance Company, with headquarters in Topeka, Kans., is offering a strong mutual policy again this year at its very reasonable rates. Every policy is guaranteed by a deposit of the legal reserve in some bank or banks, designated by the State of Kansas. The rates are based upon what it has actually cost the company to carry the risks in each county for the last five years. This and other new features, makes "The Grain Growers" the strongest company writing this class of business in the State. If you want the best hail insurance at the lowest possible rate that will carry the business, write The Grain Growers' Hail Insurance Company, of Topeka, Kans.

Gopher Exterminator Put to a Successful Test.

The Lincoln Republican has this to say about a new and much-needed invention which is now advertised in THE KANSAS FARMER:

Flint Saunders, as previously announced, was in town last Saturday afternoon, and in the presence of about fifty men, demonstrated that his exterminator is all that he claims for it. Armed with an exterminator apparatus, a spade, a piece of plate glass, and a gunny sack containing a cat, he went out to a gopher-infested field in the east part of town, where by the use of the endgate rod to a lumber wagon, he located a runway of the gophers at two points about fifty feet apart. At one of these points he dug a hole large enough to contain the cat, which he placed in the hole and covered with the glass; at the other end he applied the exterminator.

"At the end of one minute, the cat had become so thoroughly infected with the poisonous matter, that those witnessing the test were satisfied that it would die even if removed from the pit to air. It, however, was allowed to remain four minutes longer under the glass, when it was practically dead. The cat was then removed and a lighted match applied to the open end of the gopher runway. An explosion immediately followed, throwing dirt from the place where the apparatus had been applied, also from points some thirty feet more remote where the operator had been trying to locate the runway, showing that the gas had thoroughly circulated through the connecting gopher passages in the vicinity where the apparatus had been used.

"The test was a very successful one. The farmers who saw it and have gopher-infested fields of their own were greatly pleased with the result and will not be slow in making use of the invention to save their meadows. And as for Mr. Saunders, if he uses only ordinary energy in pushing the thing, he has a fortune within his grasp."

OLDS Engines

There is no gas engine as simple as Olds—compare it with others and this statement is proved. The repairs cost practically nothing. Every adjustment is very simple to make. Exact duplicate of any part can be furnished at once, perfectly machined and ready to put on. This is important in case of accident.

The Most Economical Engine

For threshing, sawing wood, churning, feed grinding, pumping, running cream-separator, etc. The reason why is interestingly told in our catalogue mailed on request. Tell us your requirements and we will help you figure out what you need. Send for our catalogue showing Type A (2-8 h. p.), Type G (8-50 h. p.), Types K and N (12-1200 h. p.) used with our Gas Producer it will reduce fuel cost 75 per cent.)

Celebrated Picture Free

For 4c in stamps to pay cost of mailing we will also send you Rosa Bonheur's "Horse Fair," the most celebrated animal picture in the world, size 16 x 20, beautifully colored, suitable for framing.

20 Chestnut Street

California Opportunities.

EDITOR KANSAS FARMER:—As I am hearing and seeing daily accounts which are being printed throughout your country by sensational newspapers of disasters which they intimate occurred throughout the State of California, I think it may be well to inform you that the city of Fresno, in common with by far the greater portion of the State, is absolutely unaffected by the disaster which befell San Francisco and, to a limited extent, the smaller cities near the Bay.

There has been absolutely no damage done here by the earthquake, in fact, the damage done in San Francisco by the earthquake was small compared with the result of the terrible conflagration, which was of course directly traceable to the earthquake's breaking the mains and the electric light wires.

The writer had the pleasure of being in San Francisco, in charge of the first relief train to reach that city, and found a marvelous condition of affairs existing; great order prevailed and suffering and destitution were relieved in an incredibly short time.

In Golden Gate Park, where 125,000 refugees were camped the night after the fire, relief conditions were so well in hand that one week after the calamity only 6,000 remained in the emergency camps, 119,000 having been shipped to nearby towns or distant homes. A similar condition existed in other refugee camps.

The future of California was never brighter than at present. While business was practically suspended for a week because of the necessity of sending immediate relief and assistance to San Francisco, the normal peace and health of the city was more than maintained. In the majority of cases the modern structures were undamaged by the earthquake, and San Francisco has already begun to restore to their original condition nearly all of the steel frame buildings which were burned out.

San Francisco, aside from the loss of life, which is much smaller than the papers have stated, being less than 300, will be greatly benefited, and not only that city but the entire State. Plans are practically matured for reconstruction of San Francisco on a broader and more artistic scale, and the old wooden buildings of pioneer days will be replaced by new and modern structures, which will make San Francisco the greatest city of our country.

The sturdy manhood of California, descendants from those pioneers who crossed the plains in 1850, is asserting itself in a manner to command the admiration of the world; by battling with this greatest disaster of modern times and taking hold of the reconstruction of the city in such a manner as to insure prosperity for all.

The action of the banks and insurance companies is making available large amounts of money for the reconstruction of San Francisco. There will be over \$200,000,000 spent in reconstruction work. This money will go to the artisans and skilled mechanics, who in turn will want food, clothing, garden truck, and hay for their teams. This will cause a great demand upon the farmers, and therefore all farm products will find a ready cash market.

The future of California is brighter than ever before. No national calamity or stringency of the money market can affect it as it will take at least ten years to rebuild San Francisco, and during that time the farmer will be one of the first to benefit by the condition. This universal condition, combined with the sunny skies and mild climate of California, causes me to invite you and your friends to come to California.

We want men here—men of brains and courage, who will profit by the greatest opportunity the State has ever known. There is room for you all. Most of the cowards have run away. The drone is not wanted, but the man with good, rich blood in his veins and courage in his heart will find in California to-day a greater opportunity than existed even in the "days of '49," in the "days of gold."

Dairy Interests

The Production and Care of Pure Milk.
OSCAR ERF, PROFESSOR OF DAIRY HUSBANDRY, KANSAS STATE AGRICULTURAL COLLEGE.

Milk is probably more universally used by people of all ages and classes the world over than any other human food. It is also true that no other food of such large consumption is handled so extensively under unsanitary conditions. Milk is a pure product when it comes from the milk gland or follicle of a healthy cow, but there are many chances for it to become contaminated before it is used.

There are certain fundamentals which should be observed in producing pure milk that are almost entirely overlooked on most of the farms where milk is produced. While these fundamentals are known in some cases, it is, however, true that there is a lack of appreciation of the importance of these principles. The dangers that are accompanied with the slovenly way of producing milk are not fully realized until the individual comes in direct contact with some experience.

DEFINITION OF PURE MILK.

The meaning of "pure milk" is simply milk having a normal chemical composition, free from all unnecessary contamination. In order to comply with this requirement, certain factors must be taken into consideration. Any person suffering from any contagious disease or any person who has been exposed to a contagious disease should stay away from the cows and from the milk. Diseases are very readily transmitted from one person to another by means of direct milk-consumption. For instance, a man goes to see his neighbor who is affected with tuberculosis or consumption. Upon leaving the consumptive person his clothes may be more or less infected and the germs may be conveyed to the cows during the time of feeding or milking. It has been reported that consumptives feeding and tending cows have infected whole herds of cows with tuberculosis.

The health of the cow is another very essential thing to consider. In order to produce pure milk a cow must be free from tuberculosis or any other disease that will contaminate milk. A herd should be examined and tested at least twice a year by a skilled veterinarian, and if there is any animal that is suspected of being in bad health she should be promptly removed from the herd and the milk rejected.

TUBERCULOSIS.

Much has been said within recent years in regard to the infectious qualities of bovine tuberculosis on the human being. While a great many experiments have been carried on to decide this matter, it has been quite positively demonstrated that bovine tuberculosis can be transmitted to the human being by the use of milk from tuberculous animals. Although this does not occur directly, it has been and is accomplished indirectly.

Theoretically, these germs, it seems, must first adapt themselves to the conditions in which they exist, and it requires several generations for them to grow and thrive well. Since germ life changes so rapidly, the passing of a few generations will not require more than 24 to 48 hours. It can be readily seen that germs can adapt themselves ultimately to the human body and transmit tuberculosis. Therefore, it is a safeguard to the consumer to have his cows tested frequently to prevent any spread of these diseases.

HOW TO DETECT TUBERCULOSIS.

The proper way to detect tuberculosis in cattle is by means of the tuberculin test, which is considered reliable if applied by one who has a thorough knowledge of cattle. This is very important for the reason that animals in the last stages of tuberculosis do not always respond to the test. While they may still be in good flesh, they are at the same time in a condition to

spread the disease through the entire herd.

Causes.—Tuberculosis in cattle is chiefly caused by poor feed, impure water, bad ventilation, improper drainage, and lack of sunlight. Infection, abortion, detention of the afterbirth, and catarrh of discharge from the generative organs all tend to reduce the vitality of the animal, which brings on the proper condition for infection.

Remedies.—Since tuberculosis is an infectious disease, the only thing left for the dairyman and stock-raiser to do is to guard against it. This can be done by keeping every cow, heifer, bull, and calf in the best of condition. If any cow should begin to all or should lose her calf, she should receive proper treatment, and the stable should be properly disinfected with a good germ-destroying agent. A cow that has retained an afterbirth should receive such aid as will enable her to discharge the afterbirth, and the generative organs should be washed out by an antiseptic which will prevent infection. The average dairyman should be anxious to rid his herd of infectious diseases of every nature, not only for his own personal benefit, but for the benefit of his patrons.

STABLES.

One of the great essentials is the proper kind of a stable. Such a stable need not be of an elaborate type, nor need it be expensive. The stable should comply with the following conditions: It should have a room where the dairy-cattle can be kept by themselves. It should be well ventilated and well drained. If the stable is constructed with stalls, the floors should be tight and the walls plain. If the stable is of the covered-yard type, it should be well bedded at least once a day, and preferably twice a day. Bedding material should not be musty or dirty.

It is of great advantage to use land plaster in the manure-gutters of stables or over the manure in the covered yard. Once or twice a year the stable should be whitewashed.

FEEDS.

Feed good, clean feed. The central part of the United States is especially blessed with good dairy feeds. Nothing has proven so cheap and so effective for milk-production with the average cow as alfalfa hay and corn. Eighteen pounds of alfalfa hay and eight pounds of corn has proven to be a good ration for an average dairy-cow of 1,000 pounds live weight. Depending upon the individual animal, it is advisable to feed some bran at times. If the cow is an exceptionally large producer, she must be fed a greater quantity of feed. The above amount must vary according to the milk-production of the animal.

Alfalfa Hay.—There is a great variation in the kind of alfalfa hay. Alfalfa hay should be, when fed to cows, bright in color, free from dust, and should contain many leaves. It is important to have a great percentage of leaves on alfalfa hay, for it is this part of the plant which contains the greatest amount of protein (which is the great milk-producing constituent). Experiments have proven that it takes a little less than a pound of alfalfa leaves to equal a pound of bran, while it requires one and three-fourths pounds of stemmy hay to equal the feeding value of a pound of bran. It is therefore necessary to harvest the hay in such a manner as to fully recover all the leaves. We recommend harvesting the alfalfa hay as green as possible. For instance, mow the hay in the morning and rake it up and haul it into a curing room in the afternoon. This curing room can be constructed in the same manner as a hay mow, or in a long crib-like style, boarded up on the side to prevent the rain from wetting the hay. In this case the hay is cured in the barn. Not more than four feet of green hay must be placed in this mow for one cutting, depending somewhat upon the climatic conditions and upon the dryness of the hay at the time it is put into the mow. Five feet is permissible, but great care should be taken that the hay should not be put in to a great depth for it is apt to spoil or be damaged by heating.

Covered Yard for Stabling Cows.—For the average farm-dairy we advocate the covered-yard system, with a milking stable attached. This stable complies with all the conditions necessary to produce pure milk, and is within the reach of every farmer to build.

SOME "DON'TS" ABOUT CREAM SEPARATORS

We "don't" ask you to buy a DE LAVAL machine simply because the supply can is so "low down" that the rest of the construction is entirely impractical.

We "don't" ask you to buy a DE LAVAL machine simply because it has a new "ball" top-bearing which as soon as the balls begin to wear a little must prove a source of endless trouble to you.

We "don't" ask you to pay \$34.85 for a mere combination of tin, cast iron and blue paint that will waste butter-fat every time you put milk through it and the best thing about which is that it can't last very long, and which will probably be worth \$1.85 for "scrap" when you are done with it.

DE LAVAL machines are sold upon a more serious and substantial basis. They skim clean; have big capacity; have the reserve efficiency to meet hard conditions; make the best butter; run with least strain on the operator; are simplest to handle and clean, and last three to ten times longer than any other.

We made a "low down" supply can twenty years ago. We used and abandoned the "ball" top-bearing fifteen years ago. Our supply cans today are at just the right height in proportion to the proper construction of a separator, while our "radical spring" top-bearings are not used in imitating machines simply because they cost much more than the various poorer substitutes.

And above all else DE LAVAL machines not only COST LEAST in proportion to actual capacity and actual life but what is very much more important they SAVE MOST, while if any buyer is unable to take advantage of the cash discount he can buy one on such liberal terms that it will actually pay for itself out of its own savings.

A DE LAVAL catalogue that explains all of these things is to be had for the asking.

The De Laval Separator Co.

RANDOLPH & CANAL STS., CHICAGO.

1213 FILBERT STREET, PHILADELPHIA. 74 CORTLANDT STREET

9 & 11 DRUMM STREET, SAN FRANCISCO.

General Offices:

109-113 YOUVILLE SQUARE, MONTREAL.

75 & 77 YORK STREET, TORONTO.

14 & 16 PRINCESS STREET WINNIPEG.

A large acreage of alfalfa would require considerable expense on the part of the average farmer to build such a curing barn. For this reason we suggest a shed 28 feet long by 16 feet wide, built with a portable roof so as to allow the roof to rest upon the hay and shed the water while it is curing. the water while it is curing.

WATER.

Provide water in abundance, easy of access, and always pure, fresh, and not too cold. Water pumped directly from the well in winter as well as in summer will give the best result. This can easily be done by means of a gasoline engine or a bull-tread power. It is not advisable to use large storage-tanks or large, open water-tanks or troughs. Salt should be accessible at all times.

FEEDING.

Dry hay or fodder should never be fed while milking, or even in the same room while milking. If necessary, sprinkle the feed before it is fed. For all practical conditions it is advisable to have a separate milking stable in which the concentrates are fed, but no dry feed. This milking stable can be cleaned easily and thoroughly aired before milking, and in hot weather the floor can be sprinkled to prevent the raising of dust.

It is not advisable to suddenly change the feed for dairy-cows, for there is always a tendency to produce milk of a great variation in the per cent of solids by so doing. Feed liberally, but in no case should decomposed or moldy material be fed.

COVERED YARD FOR STABLING COWS.

For the average farm-dairy we advocate the covered-yard system, with a milking stable attached. This stable complies with all the conditions necessary to produce pure milk, and is within the reach of every farmer to build.

Economy in various ways is only possible with the best arrangements in the stabling of cows. Cows must necessarily be stabled in a well-managed dairy for a greater part of the time in winter, and unless an easy and comfortable position is provided for, there will be a vast amount of fretting, which has its results in the diminution of the production of milk, and also in the loss of food. The good effect of the food of an animal is greatly inter-

Cleveland Cream Separator.

You get a fair, square deal on the only high grade machine made that is sold at a reasonable price. No Money in advance.

The Easy Running Separator.

Because:

The Cleveland is the only all ball-bearing machine made. Do you need to have us prove to you that the ball-bearing is the easiest running bearing ever made? Every other separator manufacturer would use them if he could. We can. We do. The aluminum skimming device and the fact that the Cleveland has the fewest parts of any separator made, make it the easiest to clean and the longest-lived. The fewer the parts, the less wear, the less repairs. The Cleveland is a guaranteed perfect skimmer.

Don't take our word. Try a Cleveland. It won't cost you anything. The new free catalog tells you how. Write for it. Address

TUBULARS WRING GOLD FROM MILK

Tubular butter brings 25 to 35 cents. Cream is worth only one cent for stock food. Yet many farmers have no separator—only half skim their milk by setting—lose 24 cents on cream fed to stock—and wonder why dairying don't pay. Tubulars stop this loss.

ferred with by every discomfort to which it is subjected. There certainly should be room enough to avoid cramping cows. With this in view we consider the covered-yard plan the best scheme. The floor should be covered every evening with a heavy coat of clean, dry straw in which the animal may recline without chafing the skin over the prominent bones, thus making rest easy and pleasant. Another advantage with this method of stablizing lies in the fact that the manure can be hauled directly from the stable to the field at such times as is permissible to drive into the field. With a heavy coating of straw it is unnecessary to remove the manure from the stable daily, as is the case with the stall plan, but only requires litter in abundance.

MILKING.

The entire body of the cow should be cleaned occasionally, but she should be cleaned daily in the region of the udder. If the hair is too long, clip this part of the body, for it makes it easier to clean the udder. The milker should be clean and neat. He should wear a clean outer garment, which is only used while milking and kept in a clean place at other times. He should wash and dry his hands just before milking. Wipe the udder with a clean, damp sponge and proceed to milk, which should be done in such a way as not to inconvenience or discomfort the cow. It should be done quickly, cleanly, and thoroughly. No unnecessary noise or unnecessary delay should be allowed. Commence milking at the same hour every morning and evening, and milk the cows in the same order. The first few streams of milk from each teat should not be milked into the pail, for this milk is very watery, is of little value, and is invariably contaminated, which will injure the rest of the milk. Milk with dry hands. Never allow the milker to moisten the hand and teat with milk. If the teats are chafed, use a small amount of vaseline. Be sure and notice that the milk is normal, not bloody or stringy or unnatural in appearance. If this is the case be sure and reject the whole mess.

SELECTING COWS.

From a business standpoint it is always wise to weigh and record the milk from each individual cow by recording and weighing a sample of the night's and morning's milk for seven consecutive days each seven weeks, and at the same time taking a sample to be tested for butter-fat. During this time it is wise to weigh the feed and estimate its value in order to see whether the class of cows that you have is making a profit or not.

TREATMENT OF MILK.

After milking remove the milk into a clean, dry milk-room, where the air is pure and sweet, and here strain the milk through a metal-sterilized gauze and a sterilized flannel cloth or a layer of cotton. (Never use flannel or cotton twice for straining.) Then aerate and cool as soon as it is strained. Milk should be cooled to 50° F. for city delivery. This will preserve the milk for several days, if handled properly. After it is cooled it should be placed in clean, sterilized milk-bottles. These bottles should be placed in a case and should be surrounded with crushed ice, after which it is ready to deliver. If milk is to be stored in cans, it should be placed in a clean, dry, cold room in tanks surrounded by cold water. As soon as it is desired to remove the cream, it should be stirred occasionally with a stirrer to prevent the cream forming a thick layer.

If the evening's and morning's milk is to be delivered at the same time, it is advisable never to mix the warm morning's milk with the cool evening's milk. However, there is no danger in mixing the two providing the morning's milk is equally low in temperature to the evening's milk. All utensils coming directly in contact with the milk should be thoroughly washed, rinsed, and sterilized with steam. If steam is not available, they should be rinsed with a solution of hot water and boracic acid and set up to dry. (See Kansas Experiment Station Bulletin No. 181.)

KEEPING QUALITY OF MILK.

When all of these steps are taken, the milk will be absolutely pure and will keep under ordinary conditions two and one-half to three days from the time it is milked. At this time, if kept at a temperature of 50° to 60° after delivery, milk should sour. If milk does not sour, it indicates abnormal milk, or perhaps some chemical or preservative has been added which has destroyed the bacterial life and has prevented souring. Frequently, milk pro-

duced under filthy conditions, which ordinarily would not remain sweet more than 18 to 24 hours, is preserved by means of preservatives. These preservatives are in a certain measure poisons which are injurious to the health and illegal to use, and some States serve a heavy penalty on the party that uses them. The only preservatives that should be taken into consideration in the production of pure milk are cleanliness and a moderately low temperature. All steps during the whole milking operation must be clean, and if one step is neglected the whole mess of milk is affected. The old saying that "A chain is no stronger than its weakest link," holds true in the production of clean milk. For instance, one can adopt all the steps herein given with the exception of putting milk into filthy bottles. With this operation all the work has been undone that was attempted by the first step.

The cities of Kansas are gradually increasing in population. There is coming to be a greater demand for good milk, and Kansas dairymen ought to be able to supply the market.

Blue-Grass Pasture for Cows.

Does a cow on good blue-grass and white-clover pasture need any grain ration while in full flow of milk?

Shawnee County. C. F. KINKEAD.

Good blue-grass pasture has no superior for milk-production. Even with the best of winter-feeding, cows will promptly increase their milk-flow when turned out on pasture of this kind.

Of the clovers, there is none better relished as a pasture crop than the small white clover. With a good blue-grass and white-clover pasture, cows will produce milk more cheaply than with any other ration which might be fed, and there is probably no need of feeding any grain unless in exceptional cases to very heavy-producing cows. The worst fault of the blue-grass is that it stops its growth during the hot, dry weather of the summer and must be supplemented by green forage-crops and grain-feeding.

G. C. WHEELER.

Advice for the Creameries.

R. M. WASHBURN, MISSOURI STATE DAIRY COMMISSIONER.

The summer season with its flood of cream is near at hand. This year there will be more difficulty in disposing of poor butter than ever before, and also more difficulty in getting good cream, unless we go at the proposition straight and with vigor. More butter than ever before is going to be made in this Western country this coming year, and it is up to the managers of the several creameries to produce the quality. There is absolutely no use in blaming the farmer for sending in poor cream so long as the poor and the good bring the same price. He will not give that extra work and care to make a good cream when there is no more money in it. Would you? Cream must be graded and graded this coming season or our market will be badly injured for many years to come.

SUGGESTED STANDARD.

First Grade Cream—Test 30 per cent or over and be smooth and free from rancid or stale flavors. It may be slightly sour, if clean.

Second Grade Cream—Everything else. Then make a difference of at least 4 cents per pound fat between first and second. Pay a good price for good stuff, then if your competitor wishes to pick up the old stuff at your top price he will be the loser, not you.

We must all combine thus far to agree to live up to the grading proposition. If the cream is shipped direct from the farm the matter will be easy; where it is received and shipped in bulk, get 4-ounce glass jars with a tight screw-cap upon which a number is stamped, fill this with the cream to be tested and graded and drop it into the can of cream.

This Custom Is Now General.

It has now become a general and also a safe rule to demand brands of goods that are well known and have a reputation for quality and reliability. Nowadays the manufacturers of good goods inform consumers of this fact and point out that safety lies in buying the brands that bear their names and trade-marks.

In this respect the Mayer brands of shoes are deserving of special mention. Our readers have no doubt become familiar with those shoes and know of their excellent wearing quality by actual use. The Mayer factory turns out shoes suitable for every member of the family and for all uses, Sunday shoes and everyday shoes, and they are known throughout the broad expanse of our land as the shoes of style and quality.

The "Honorable" are very popular line shoes for men and "Western lady" shoes embody the fit and style demanded by well-dressed ladies. Please bear this in mind when next buying shoes.

A Reward FOR THE Man Who Milks

The man who ships his cream direct is rewarded for quality. He stands alone. He doesn't have to bear the burdens and suffer for the mistakes and carelessness of his neighbors. If your cream is clean and not too sour and good flavor, you get the highest grade and the best price. If your facilities for handling your cream are better than your neighbor's and you can keep it longer you need not ship so often. Consequently you economize on time.—"Time is money."

Everything favors the individual shipper.

Our system takes care of him. Our factory is his natural home.

Send us your cream and we'll send you the money.

Respectfully,

BLUE VALLEY CREAMERY CO.,

ST. JOSEPH, MISSOURI.

Peerless Cream Separators

Reasons Why the PEERLESS is the Best

1st—Twice the capacity of any other bowl. That is to say two times smaller than any other bowl of equal capacity.

2d—Compound feature, two bowls in one, hollow bowl, and disk bowl, combining all the features of the tubular and disk machines.

3rd—Enclosed frame. Free from dust. Injury resulting from machine impossible.

4th—Perfectly noiseless.

5th—Heavy enough and strong enough to lift a box car, which insures durability.

6th—The bushings made of phosphor bronze—the most serviceable material for the purpose. Fitted and guaranteed to be accurate to $\frac{1}{100}$ of an inch.

7th—Every journal bushed with brass or phosphor bronze. This fact together with the fine adjustment described above, accounts for the light draft of the Peerless machine. Each bushing is made in duplicate and interchangeable and if at any time they show wear they can be replaced at small cost.

8th—at normal temperature the skimmed milk will always show less than 5-100 of 1 per cent of butter-fat and generally less than 1-100 of 1 per cent butter fat. PEERLESS CREAM SEPARATORS are guaranteed to anybody—everybody, anywhere—everywhere.

W. F. RIGHTMIRE, - 216 The Drive, - Topeka, Kansas

THREE FACTS

For Sick Women To Consider

FIRST.—That almost every operation in our hospitals performed upon women becomes necessary through neglect of such symptoms as backache, irregular and painful periods, displacements of the female organs, pain in the side, burning sensation in the stomach, bearing-down pains, nervousness, dizziness and sleeplessness.

SECOND.—The medicine that holds the record for the largest number of absolute cures of female ills is Lydia E. Pinkham's Vegetable Compound. It regulates, strengthens and cures diseases of the female organism as nothing else can.

For thirty years it has been helping women to be strong, curing backache, nervousness, kidney troubles, inflammation of the female organs, weakness and displacements, regulating the periods perfectly and overcoming their pains. It has also proved itself invaluable in preparing women for childbirth and the change of life.

THIRD.—The great volume of unsolicited and grateful testimonials on file at the Pinkham Laboratory at Lynn, Mass., many of which are from time to time published by permission, give absolute evidence of the value of Lydia E. Pinkham's Vegetable Compound and Mrs. Pinkham's advice.

Mrs. Pinkham's Standing Invitation to Women.—Women suffering from any form of female weakness are invited to promptly communicate with Mrs. Pinkham, at Lynn, Mass. All letters are received, opened, read and answered by women only. From symptoms given, your trouble may be located and the quickest and surest way of recovery advised. Mrs. Pinkham is daughter-in-law of Lydia E. Pinkham and for twenty-five years under her direction and since her decease she has been advising sick women free of charge. Out of the vast volume of experience in treating female ills Mrs. Pinkham probably has the very knowledge that will help your case. Surely, any woman, rich or poor, is very foolish if she does not take advantage of this generous offer of assistance.

Tired Nervous

When you feel languid, tired, nervous and irritable, your vitality is low—your supply of nerve energy exhausted, and your system running down for lack of power,

The organs of the body are working poorly, or not at all, and you are not getting the nourishment needed. This soon impoverishes the blood and instead of throwing off the impurities, distributes it all through the body. This brings disease and misery.

Feed the nerves with Dr. Miles' Nervine, a nerve food, a nerve medicine, that nourishes and strengthens the nerves, and see how quickly you will get strong and vigorous.

"My wife suffered with nervousness previous to a recent attack of typhoid fever, but after her recovery from the fever, she was much worse, and could hardly control herself being exceedingly nervous when the least excited. She was very restless at night, and never had a good night's rest. She also suffered much from nervous headache. Dr. Miles' Nervine was recommended by a friend. After the first three doses she had a good night's rest, and at the end of the first week's treatment she was wonderfully improved. Continued use of Nervine has completed her entire cure."

OTTO KOLB,

1921 Cherry St., Evansville, Ind.
Dr. Miles' Nervine is sold by your druggist, who will guarantee that the first bottle will benefit. If it fails, he will refund your money.

Miles Medical Co., Elkhart, Ind.

The Poultry Yard

Conducted by Thomas Owen.

Egg-Eating.

Egg-eating by hens is not a natural habit. They first learn it in confined runs and coops by the breaking of eggs or an occasional soft-shelled egg being dropped from the roost at night. Hens display unwonted eagerness to devour a broken egg at night, and the inference is when they attack the egg in the nest, that their systems demand something an egg furnishes and which they can not obtain otherwise. A reasonable supply of fine meat, ground bone, green feed, and lime in some form usually operates as a preventive for this almost incurable habit. After a hen once gets a taste of an egg it is almost impossible to break her of the habit, and, unless a very valuable fowl, she should be killed. The best remedy we know of is to furnish them with very dark nests, or provide them with a nest-box, the bottom of which should be cushioned and padded, having a hole in the center large enough for the egg to roll down out of sight underneath. A preventive is to feed lots of animal food and to salt their soft feed quite liberally.

Color of Eggs.

A correspondent, having purchased a sitting of Barred Plymouth Rock eggs and the color of same being diversified, asks if such is not a sign of impurity. We answer that it is not, because the eggs of Plymouth Rocks, both barred and white, vary in color from a pure white to a dark brown. None of the American classes of fowls lay a uniformly colored egg, while the Mediterranean, on the other hand, invariably lay white eggs. Brahmas and Cochins lay dark-brown eggs. It seems to be the rule that the older the breed, the more uniform is the color of the egg. If all breeders of Plymouth Rocks could agree on the color of the egg, they probably could breed to that color and get it uniform in time. But as long as there is a diversity of opinion as to which is the proper color, so long will the egg continue to come in all colors. The writer has a preference for a dark-brown egg, but his neighbor may have a preference for a clear-white egg. The Boston market calls for brown eggs, while the Philadelphia market will have none but white eggs, and so it goes. As long as our market does not call for any particular color in eggs we do not see that the color question amounts to much, only don't judge of the purity or impurity of the breed by the color of eggs that it lays.

Small Pens.

A failure results from the experiment of keeping fowls in small pens, in many cases, on account of the lack of exercise. They may be fed regularly with the proper variety of food, watered often, have all the grit and animal food they need, yet, if they have no exercise, they will not thrive. Fowls in a state of domestication lose the use of their wings in a great measure, and can not take exercise by flight. They must, therefore, depend on running, walking, or scratching. The hen is a scratching creature, and those poultry-keepers living in villages, having only small space for their flocks, should not omit furnishing the inducements to this exercise. Every one knows with what pertinacity fowls will dig in a flower garden when they get a chance. With a spade in hand the small yard may be rendered attractive to biddy by digging it up and sowing lots of millet seed therein, and she will scratch till every seed, bug, and worm is secured, as contentedly as she would in the flower garden, and thereby obtain her needed exercise. It is not absolutely necessary that fowls should have unlimited range to do well and be profitable, for they seldom go beyond reach unless forced to seek for their living. However, ample space is needed for walking and scratching, and if they get this, and the place be kept clean, pure, and fresh they will do well. Inactivity is the bane of all fowls, for it engenders disease, morbid and unnatural desires such as feather-pulling and egg-eating. Hence, it is advisable to give fowls all the exercise they can take, for it stirs up the blood, keeps down internal fatness, promotes fertil-

ity, digestion, and assimilation, consequently health, contentment, and profit are sure to follow.

The Breeding of Geese.

That the growing of geese for market is a decidedly profitable branch of poultry work is less well-known than it should be. Geese are easy to raise when rightly managed, and as they pretty much take care of and feed themselves in summer, when the farmer is engrossed with other labor, the growing of geese especially commends itself for those who are so busily engaged they feel they can not give the time to poultry work.

The essential thing for them is a grass range. With that accessible they pretty much take care of themselves. In a very dry time, when fresh grass is not at hand, they require some grain-food, but as they give the preference to brooksides and low, swale land, which is practically certain to have green grass growing even when the upland is brown and dry, it is easy to see that the times when they require grain-food in summer are few and far between.

In winter it is necessary that they have grain-food once a day, and when laying time comes they should be given a ration of meat-meal or beef scraps mixed up with some cooked vegetables and meals. At the breeding season they should be well fed in order that they may produce a good many eggs that shall yield strong, vigorous offspring. Nor do they need expensive houses and runs. An open front shed, facing the south, is the best quarters for them. It is better that this shed be a little distance from the other farm-buildings, so that the laying and sitting geese be as little disturbed as possible during the laying and breeding seasons.

The most popular varieties of geese are the African, Embden, Toulouse, and Brown and White Chinese, of which the two varieties of Chinese are the smallest. Of the larger varieties the Toulouse and African are gray, the Embden white. As the feathers may be made a considerable source of profit, and as white feathers command the highest prices, it may be well for a beginner to choose a white variety at the outset.—Gem State Rural.

Build Now for the Future.

Producing winter eggs is the most profitable end of the poultry business with the larger number of poultry-keepers.

The obtaining of a liberal supply of eggs with any degree of certainty during the winter months is the result of thorough care and preparation. While hens can frequently be induced to finish molting before winter really sets in, still it is to the pullets that we must look for our principal source of supply. Now any old hen or pullet we pick up will not do this trick. They must be in the proper condition to lay. We can not expect a hen that is not through molting to lay many eggs, as a general thing. Neither can we expect an immature pullet to lay. In other words, if one is after a liberal supply of winter eggs, the time to make one's preparations is the spring before, and get the chicks out early enough so that the pullets will get their growth and mature before the cold weather sets in. If these pullets begin laying freely before November 15, the battle is more than half won, providing they have reasonable care and feeding. It is a generally recognized fact that the average hen produces fewer eggs each succeeding year after the first laying season. And it has also been my experience that the ordinary hen will also molt a little later each year. So it is obvious that for the winter-egg business all 3-year-old hens should be discarded and preference given to pullets, if possible. With the American breeds I consider the last two weeks of March and the first two of April the most satisfactory time to hatch winter layers; and with the Mediterranean breeds from the middle of April to the latter part of May. It is not advisable to hatch too early, as such pullets will often lay a small litter and molt, in which case they are not much better than old hens. It is necessary to get good results to keep the pullets growing with as few setbacks as possible, as anything that will retard their growth is pretty certain to affect the winter egg supply. If winter catches a pullet in an immature condition, she can generally be depended on not to lay before the price of eggs is on the decline.

To keep the laying stock in condition during the winter when nothing is

POULTRY BREEDERS' DIRECTORY.

FOR SALE—Choate Light Brahma eggs, \$1 for 15; \$1.75 for 30. Wm. Plummer, Barclay, Kans.

ROSE COMB BROWN LEGHORN EGGS, 15 for \$1, 50 for \$2.50, 100 for \$4. Mrs. John Holzhey, Benden, Kans.

A. D. WILLIAMS, Inman, Kans.

available, they must be supplied with all the elements necessary to egg-production. Grit and shells should be kept before them at all times, and the fowls should be made to scratch in litter for their whole grain to keep them in a contented, vigorous, and healthy condition. Hens like a variety of food, and it has generally been my method to feed wheat, corn, oats, and barley as a scratching food, generally separately rather than mixed, and by far the largest share of wheat. I give a light feed in deep litter just to keep them busy at noon. Then just before dark give a liberal feed of whole grain which I mean to vary, and rather more than they can eat well mixed in litter, the idea being to have the fowls go on to the roosts with full crops, and leave a surplus to keep them scratching an hour or so in the morning, when I feed a mash of bran, corn-meal, beef-scrap, and boiled potatoes or steamed clover fed warm and crumbly, just what they will eat up clean. This method of feeding, with fresh water with the chill taken off morning and night, with a few cabbage or beets from day to day will generally produce a good crop of winter eggs, providing the fowls are housed in snug, dry quarters free from moisture. A low building is generally preferable, and ventilation enough allowed to prevent things from becoming wet and sticky. The main thing is to keep the fowls hustling and vigorous.—Successful Poultry Journal.

\$300,000,000 in Eggs.

The busiest spot on the face of the earth is Uncle Sam's farm, and the busiest thing on the whole busy ranch is the Great American Hen. Biddy's joyful cackle begins on the New England coast at sunrise—follows the morning light across the prairies of the Middle West, and ends only at the "jumping off" place—the Golden Gateway to the Pacific. Every five years Biddy doubles her business. Think of that—twice as many eggs, chicks, fowls, in 1905 as in 1900, and this year will probably show a total credit to Biddy's industry of about \$300,000,000.

What is the rest of Uncle Sam's barnyard doing to compare with that showing? There's no mistaking a patent fact—Biddy "cuts the ice," and the American farmer and his hustling wife are getting "wise" to the fact. Everywhere the land is dotted with chicken-coops and hen-yards. The man with a farm, the man without a farm—and the suburbanite—have all gone into poultry, and those who put brains in too, are getting dollars out. This kind of people—hundreds of thousands of them—keep fowls in a healthy and prolific condition the year 'round by feeding Dr. Hess Poultry Pan-a-ce-a, which gives the fowl in confinement, by perfect digestion and assimilation the same elements she would find for herself if at liberty.

Careful study and experiment under just the conditions that the average poultryman finds in his own yard, led Dr. Hess to the gradual perfecting of his Pan-a-ce-a. It is not a stimulant, and should not be confounded with preparations of that class. It does not excite unnatural production only to leave the hen exhausted and unprofitable. Rather, it makes a hen natural under unnatural conditions, by supplying iron for the blood and nitrates to help nature in throwing off poisonous matter, so that "tone" and vigor are given the whole system, and disease eliminated. It is easy to see from this how important Poultry Pan-a-ce-a is to the hen man. Dr. Hess and Clark, of Ashland, Ohio, are so sure of its positive merit that they cheerfully give a guarantee with every package. All they ask is that you use it according to directions. If you do and occasionally sprinkle the roosts, nests, and fowls with Instant Louse Killer your

When writing mention this paper.

success in poultry culture will be large. It costs but a penny a day to feed it to 30 fowls.

The Farm Telephone.

The telephone is one of the greatest blessings to the farmer that has ever been invented. It has become a necessity, has no equal as a time-saver, and time is money. After once being used, you can't keep house without it. In time of sickness, its value can not be estimated. You can step to the little box on the wall and have a doctor on the way before you could get a horse ready to go after one, and then he can tell you a great many times what to do to relieve the suffering of your loved ones. You can call a veterinarian for your stock when they are sick and many times save your valuable animals. Many a farmer has said, "There is a time once every year that my telephone is worth every dollar both it and the line has cost me for only three-minutes' use of it."

The telephone is so useful in so many ways. It takes the lonesomeness away from the farm and makes farm life one of the most independent lives there is to-day, but like all other good things, it has its drawbacks. Lightning is the worst enemy of the telephone industry to-day. It is dangerous when it follows the telephone-line wire into your home, as it often endangers the lives of your family and property, and how annoying to have a telephone burned out in the busy season when you need it so very badly, and that is just when we have the hard electrical storms which puts your telephones out of business, but you can save all this worry, annoyance, and danger if you will write the W. E. Ashby Telephone Cut-Out Company, 111 Square St., Chariton, Iowa. They have a device that they guarantee to keep all of the lightning out of your telephones. See their advertisement on another page. Write for their booklet—how to get one of these devices free.

Minerva's Wisdom.

The following anecdote is being told of Miss Helen Gould: Miss Gould, who is noted for her wit, recently entertained at luncheon a party of little girls from some charitable institution. Afterwards, Miss Gould showed the children about her house, pointing out some of its interesting contents.

"This," she said, stopping before a bronze in the hall, "is a statue of Minerva."

"Was she married?" asked a little girl.

"Oh, no, my dear," replied Miss Gould; "you know Minerva was Goddess of Wisdom."—Harper's Weekly.

Horticulture

Cultivation of the Orchard.
JOE A. BURTON, ORLEANS, IND., BEFORE THE AMERICAN POMOLOGICAL SOCIETY.

In the evolution of improved methods in agriculture from the crude ways of our fathers, the teachers themselves had to learn. With no one to call them down, they frequently went to extremes. Because more culture than our fathers gave proved beneficial, they jumped at the conclusion that the more culture the better. Also, if intensive culture was best for the pumpkin, it was also best for the plum; if best for the plum, also for the apple. They failed to observe that yard-grass does best only where the ground is tramped hardest. Careful observation will show us that some things grow well only by much culture; other things do well with little or no culture. Just how much culture the apple orchards require for best results has not yet been fully determined. It will be found somewhere between the clean culture taught by our agricultural colleges and the no-culture practiced by many farmers.

I have a small orchard planted about twenty years ago in blue-grass sod, and has been so kept ever since. The only cultivation has been a mulching of straw around the trees when we had the straw and time to apply it. This has been about once in two years. On account of the heavy yield of summer varieties, we have found it necessary to apply stable manure to them freely. This year the fruit from two Yellow Transparents sold for \$20; from one Trenton, \$11; two Benoni, \$26.

But I am not here as an advocate for a blue-grass orchard. I am only trying to point out the fact that the high culture necessary for a good grain-crop is not always necessary for a good apple-crop. To be plain, I don't believe clean culture is best for the apple. The amount of culture for best results depends on the fertility of the soil. On very rich soil, apples do best with no culture, save mowing the weeds or grass. Too much, and especially too late, cultivation prevents the proper coloring of the fruit. Whatever detracts from color detracts from quality.

Our apple lands in Southern Indiana are a heavy clay, rich in potash and a goodly amount of phosphoric acid, both largely in unavailable form. Nitrogen is in very moderate quantities. The land is hilly, and clean culture means the washing away of the soil. I don't believe the All-Wise One made this, the best of all apple soils, and then, for the best results, requires the operator to do something that will ruin the soil. True, we may plow the orchard in the spring, cultivate during the summer, and grow a cover crop for winter that will prevent washing during winter, but there is no protection during the summer.

To make the potash and phosphoric available, it is necessary to incorporate humus with the soil. This is done more readily by keeping the vegetable matter on top, or near the surface, than by turning under. With a cover crop on the land, whatever it be, instead of plowing under, we grind it up with the surface soil by use of the rolling harrow. We use two harrows, one throws in, the other out. One follows the other, thus always keeping the land level. We go both ways. If we have one inch of cover crop, and mix it with two inches of soil, we have a mulch of four to five inches. This will effectually prevent any washing and will remain a mulch till we grow another cover crop. It is, in fact, a kind of sponge that will drink up a two-inch or three-inch rain, before there is any surplus water to run off. This harrowing can be done as often as desired, or as the health of the land requires. Our orchard is fairly rich, and we never harrow more than twice, and never later than June 15. For a cover crop, we grow crab-grass, and think it ideal. It is cheap for seed, being already sown, makes a nice carpet to work on, retains moisture, never giving up its dew till in the afternoon. If the land were poor, we would grow some nitrogenous crop.

Now, a word about labor. The hired man loves to ride. This mode of culture pleases him, and he keeps in a good humor. But put him to plowing in the orchard, and it is just the reverse. Is there any other work so disagreeable? He must lift and throw his plow twice every thirty-three feet, and at the same time he must keep the horses and the single-tree off the trees.

He is sure to bark some trees. Then he will get mad and abuse the horses, when they are not to blame at all. They will get mad, and in the excitement skin lots of trees. Then you must keep the children away, lest they hear something not in the Sunday-School lesson. The poor hired man! Will St. Peter charge these ugly words up against him? I rather think not, many of them, but will put a goodly number in the bill of the easily duped orchardist, but by far the larger part will have to be settled for by the professor who taught that such culture was necessary.

That fine apples can be grown by my method is evidenced by my awards at Paris and St. Louis; a silver medal at Paris, a gold medal at St. Louis; and this season's crop. The product of 110 Grimes this season sold for \$1,700, or \$15.50 per tree. I don't claim these results are due to the method of cultivation alone, but it has much to do with it. It is certainly the easiest method of successful cultivation.

The Apiary

The Beginning of the Honey Season.

The watchword with the beekeeper now is the strength of colonies. Every possible means should be used to increase the number of bees in each hive. A good honey-crop depends solely on strong colonies, and all such that are strong at the beginning of the honey harvest, can be depended upon to store a valuable crop of honey.

To work a colony up in strength, it must be constantly gathering honey, or fed. Feeding produces as good results as gathering honey, if fed regularly, in producing young brood, and as large a force of bees will be the result. It is not necessary to feed if the bees are gathering honey from flowers, but if they are not securing enough honey to keep brood-rearing going on, or do not have a surplus in the hive to draw on, it is best to feed them.

It is an important thing to know just how and when to feed bees. Feeding should be done at night, and not during the daytime. Small wooden feeders holding a pint or half a pint may be set at the entrance of the hive after dark each evening, but to be absolutely safe with this manner of feeding, be sure that the bees find the syrup immediately after placing it there. At first they may be slow of finding it, but when once acquainted with it they will promptly attend to it. In the morning early before the bees begin to stir take away all the feeders, and put them securely away somewhere, so the bees will not find them during the day. Feeders may be placed in an upper story to the hive, and the bees thus fed more safely, but it is inconvenient to thus have to remove the upper story and feeders when we wish to examine the colony, and at this season of year we want to go through them very frequently. Feed only the best of white sugar at all times, as bees often refuse to take the cheap dark grades of sugar. Make a good syrup that has some body to it, and not merely sweetened water.

Get a full equipment of supplies and plenty of them. A lack of even one hive fully equipped, when needed, would cost you almost as much as would pay for all your supplies. All needed hives, surplus honey boxes, and comb foundation are indispensable, and many other things might be added to this list. If you have many bees get an extractor, and even if you have but a half dozen colonies it will pay for itself in one season. We do not keep supplies for sale, but they may be found by looking up the advertisements in THE KANSAS FARMER.

Taking the country over, June is perhaps the best honey month in the year, but in many localities a good surplus may be obtained in May, and also in August. One who has kept bees in any one locality for a number of years can nearly tell just when to look for every important flow of honey, when such and such flowers open, and thus he can be prepared to take advantage in each case.

The secrets of success are first, strong colonies; second, abundance of storage room properly applied. Many small beekeepers underestimate the storage capacity of a strong colony of bees, and do not give them enough surplus room. This is the most fatal mistake we can make. It matters not how well we have managed up to this point, if we fail in this, we fail in all. Usually, at the beginning of the honey

30 Years of Satisfaction. BLACK DIAMOND Ready Roofing

On ten years and still in good condition.

Covered with 15,000 ft. of Black Diamond Roofing.

BLACK DIAMOND is not an experiment. For over 30 years it has been used all over the country with satisfaction. Millions of rolls are being sold every year.

Black Diamond is not sold on a promise of what it will do, but on a record of what it has done.

No other ready roofing can equal its record. It is made of wool felt and pitch, the best waterproofing materials known. Anyone can lay it—no skilled labor required.

Samples and booklet showing buildings all over the country that are covered with Black Diamond, mailed free on request.

GENERAL CONDITIONS.

Excepting Saturday and Sunday the week was warm. In the western division the temperature averaged about normal, and in the middle and eastern divisions slightly above normal. The maximum temperatures generally occurred on Thursday but failed to rise as high as those of the preceding week. The minimum temperatures generally occurred on Tuesday and, in general, were lower than those of the preceding week. The precipita-

RAINFALL FOR WEEK ENDING MAY 5, 1906.

tion for the week was above normal in the extreme northwestern and southeastern counties while light to fair showers occurred over the rest of the State. Thunderstorms occurred in the central and southern counties and hailstorms in the southeastern counties. The week has given good growing weather.

CONDITIONS IN DETAIL.

EASTERN DIVISION. Anderson.—The week has been cloudy and showery, with rain on the last five days. Hail was destructive in parts of the county. An exceptionally heavy rain occurred northeast of Garnett, on the 4th.

Atchison.—The week began and ended with cloudy days, but the rest of it was clear and warm rain fell on two days. The total rainfall was 0.41 of an inch.

Allen.—It was a mild, cloudy week with cool nights and light rains almost every day. Brown.—It was a cool week with the maximum temperature ranging in the sixties and seventies, and cool nights. Light showers fell the first part and latter part of the week.

Bourbon.—The weather was mild and partly cloudy. Showers fell on five days but were generally very light. The highest temperature was 85° on the 1st.

Chase.—The temperature has been about normal. The maximum rose above 80° on two days and the minimum fell to 43° on two days. There were three clear days and three days with light showers.

Chautauqua.—The week was cloudy and rainy and only one day was entirely clear. A number of thunderstorms occurred during the week and quite a hailstorm was experienced on Friday night. Saturday morning was rather cool with a minimum temperature of 52°. The highest temperature was 87° on Saturday.

Cherokee.—The temperature was a little higher than the average for the season. It rained on five days, the total for the week being 3.14 inches. There was a severe thunderstorm and some hail on the 4th, but it did little damage.

Coffey.—Two days were clear and five partly cloudy. Light showers fell on four days. It was rather warmer than the seasonal average till the end of the week when it turned cool.

Crawford.—The days were generally warm with westerly winds. The temperature did not go very high nor very low. There was a heavy rain on the first of the month and showers on three other days.

Elk.—There was a very heavy, local rain and a destructive hailstorm on Monday, but some parts of the county are needless rain. Wednesday and Saturday were cool days but it was warm the rest of the week with temperature below 50° on only one day.

Greenwood.—The week was partly cloudy

The temperature was a little lower than the seasonal average.

Cloud.—The first two days and the last day were cloudy but the middle of the week was clear. The temperature was a little above normal the first two days, but below the rest of the week. Showers fell on four days, making a total of 0.42 of an inch of precipitation.

Cowley.—A heavy rain of 3.05 inches fell on the 30th and 0.40 of an inch fell on the 2d. The weather was warm.

Ellis.—The first two days were cool and showery, the middle of the week was clear and fine, and Saturday was cloudy, cold and damp. Light showers fell on three days. The mean temperature for the week was rather low.

Ellsworth.—Light showers fell on three days making altogether 0.34 of an inch of rain.

The highest temperature was 86° on the 3d and the lowest 38° on the same day.

Harper.—The rainfall for the week was 0.33 of an inch on the 30th.

Harvey.—The week was moderately warm with no rain. Saturday was quite cool with a northeasterly wind.

Harper.—The rainfall for the week was 0.33 of an inch on the 30th.

Harvey.—The week was moderately warm with no rain. Saturday was quite cool with a northeasterly wind.

Kingman.—The first two days and the last day of the week were partly cloudy and the middle part was clear. Wednesday and Saturday were quite cool but the other days were about the seasonal average. 0.60 of an inch of rain fell.

McPherson.—There was pleasant weather during the week but it became rather cool towards the close. 0.12 of an inch of rain fell on the 3d.

Pratt.—Excepting the first two days, which were showery, the week was warm and pleasant. The highest temperature was 87° on the 1st and the lowest 44° on the 3d.

Reebs.—Maximum temperatures ranged in the sixties on four days and minimum temperatures in the forties on five days, but two of the days were warm. Showers fell on three days.

Russell.—Monday and Thursday were quite cool but the other days were pleasant. Moderate showers fell on two days making a total of 0.34 of an inch of rain.

Saline.—The weather was rather cool, the temperature falling below 50° on every night but one and rising to 80° on but one day. A trace of rain fell on the 2d and 0.32 of an inch on the 5th.

Sedgewick.—The week was a dry one with temperature slightly above normal. Three days were clear, three cloudy and one partly cloudy. Showers fell on five days.

Stevens.—The temperature was a little higher than the average for the season. It rained on five days, the total for the week being 3.14 inches. There was a severe thunderstorm and some hail on the 4th, but it did little damage.

Wichita.—The week was cool and partly cloudy. Light showers fell on four days. It was rather warmer than the seasonal average till the end of the week when it turned cool.

Wichita.—The days were generally warm with westerly winds. The temperature did not go very high nor very low. There was a heavy rain on the first of the month and showers on three other days.

Wichita.—There was a very heavy, local rain and a destructive hailstorm on Monday, but some parts of the county are needless rain. Wednesday and Saturday were cool days but it was warm the rest of the week with temperature below 50° on only one day.

Wichita.—The week was partly cloudy

and generally warm. Good local showers fell on three days.

Jefferson.—There were only two clear days during the week. Maximum temperatures ranged in the sixties the first of the week and in the seventies and eighties the latter part. The rainfall was only 0.25 of an inch.

Johnson.—The week has been ideal. The highest temperature was 81° on the 1st. Minimum temperatures were generally in the forties and fifties. 0.32 of an inch of rain fell on the last two days.

Linn.—One day was clear and the rest were partly cloudy. Showers fell on the last five days, the total for the week being 0.76 of an inch.

Lyon.—The highest temperature was 78° on the 1st, 3d, and 4th, and the minimum was 48° on the 5th. Traces of rain fell on three days.

Marshall.—One day was cloudy, four partly cloudy, and two were clear. 0.15 of an inch of rain fell on Monday and a trace on Saturday. The temperature was about the average for the season.

Montgomery.—The week was warm and showery with an excess of cloudiness. The highest temperature was 90° on the 4th and the lowest 51° on the 5th. The rainfall for the week was one inch.

Osage.—The days were warm and the nights were cool, the maximum temperatures ranging in the seventies and eighties, the minimum for the week being only 44°. Showers fell on three days, making a total of 0.38 of an inch of rain.

Shawnee.—It was a dry week with 0.20 of an inch of rain on one day, the 5th. The temperature was above normal on four days and below on three, the mean for the week being about the seasonal average. Three days were clear, three partly cloudy, and one was cloudy.

Wilson.—The first three days were partly cloudy with rain on Monday, Tuesday, and Wednesday. Friday afternoon there was a heavy rain, 1.44 inches, and some hail.

Woodson.—Light rains occurred the first of the week with rather low temperatures. There were some severe local hailstorms damaging fruit and gardens to some extent.

Wyandotte.—Showers occurred every day during the week, but, excepting Saturday, the weather was warm and generally pleasant. A thunderstorm and some hail occurred Friday afternoon.

MIDDLE DIVISION.

Barber.—It was good growing weather with the days warm and pleasant and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Barton.—The highest temperature was 83° on the 3d and the lowest was 42° on the 1st. There were thunderstorms on the 29th, 30th, and 2d. Two days were clear, three partly cloudy and two cloudy. Showers fell on four days.

Barton.—The highest temperature was 83° on the 4th and the lowest was 44° on the 2d. Saturday afternoon there was a heavy rain, 1.13 of an inch of rain fell.

Clay.—The week opened cloudy, the middle part was clear and the last two days were partly cloudy. Showers fell on Monday and Saturday, making a total of 0.31 of an inch.

Concordia.—The week was warm and showery with the days warm and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Cunningham.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Ellinwood.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Hays.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Macksville.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool and the nights cool. Rain fell the first two days, making a total of 0.91 of an inch. There was a thunderstorm on the 29th.

Medicine Lodge.—The days were cool

Kansas City Live-Stock Market.
Stock Yards, Kansas City, Mo.,
May 7, 1906.

The liberal run of 38,000 cattle last week is followed to-day by 10,000 head. Trade was most healthy last week, considering the heavy proportion of beef steers included, and prices generally advanced 10@20c. Outside markets have moderate runs to-day, so that some Chicago orders were filled here, and the market on killing cattle was 5@15c higher. Bulk of the beef steers coming are plain, short-fed kinds, the scarcity of good to choice ones still continuing. Top was \$5.65 last week, although the limit on prime steers is around \$6. A few droves were steers at around \$6. A few droves were hands, but they generally lost money, only one or two bunches showing a profit by going on. Top to-day is \$6.75, bulk of the plain to good steers sell at \$4.60@5.30, some choice heifers and yearlings mixed at \$4.90@5.30, frequent sales of good heifers at \$4.75, cows \$3.25@4.50, cannery and stock cows and heifers \$2.25@3.40, bulls \$3.25@4.25, veals \$4.50@6. Immense numbers of dairy calves are going on the Eastern markets now, a very weakening feature. Stockers and feeders sold higher most of last week, but closed up with the advance lost, and 1,000 more on hand than close of previous week. Dealers look for somewhat lower prices. Stockers sell at \$3.35@4.75, feeders \$4.25@5, a few cattle either way.

Hog supply is enlarging, 61,000 last week, and prices are weakening accordingly. Demand is extra strong, however, and the decline is gradual. Run to-day is 8,000 head, market steady to strong, top \$6.32½, bulk of sales \$6.15@6.27½, weights below 200 pounds \$6.10@6.25, pigs \$5@6. Net loss last week was 21c, whereas same week a year ago the price advanced 25c, easily understood when it is considered that the run same week last year was only 38,000 head.

More than 44,000 sheep and lambs arrived last week, but the bulk of them sold a quarter higher than preceding week. An extra large percentage of the supply coming is lambs, bulk of the woolen lambs selling at \$7@7.35, a big string to feeders at \$6.50, clipped lambs \$6.10@6.25, clipped wethers \$4.7@5.50, woolen ewes \$5.90, yearlings \$6.50. A few lots of Texas muttons sold last week at \$5.05@5.25. Run is 5,000 head to-day, market strong. Smaller runs are expected.

J. A. RICKART.

South St. Joseph Live-Stock Market.
South St. Joseph, Mo., May 7, 1906.

Local arrivals of cattle were about the same as a week ago, but the total for five leading points showed a decrease of about 11,000. It was clearly evident at the close of business last week that another run such as was recorded at the leading points one week ago, would prove to the disadvantage of the sellers; however, with the falling off reported the trade at once took on a more promising color. The demand proved active, and local prices were fully steady to strong, for the entire supply of medium to good dressed-beef styles of steers. There were no strictly choice beeves on offer, the best here being an uneven but long-fed and well-fattened steer weighing 1,300 pounds that sold at \$5.30. The bulk of fairly fleshed to good fat and light medium-fed steers sold at \$4.75@5.15; light weights of the cheaper-priced kinds sold actively and strong as the feeder trade was a lively competitor for anything that would do to go back to the country. Cows and heifers continue in very small supply and the market was steady and fairly active with some sales indicating a little strength. Stockers and feeders were actively wanted and the trade could use largely increased receipts in this line on the basis of \$3.75@4.50 for fair to choice yearlings and feeders.

As with cattle, the aggregate supply of hogs in sight showed a sharp falling off compared with Monday of the previous week. The market was soon established on a steady to strong basis as compared with the close of last week, and gained some strength as the forenoon advanced. The falling off in receipts is taken to indicate that the country is in position to resist breaks like that of last week and will to a certain extent dictate prices for the next few weeks. Hogs to-day sold within a very narrow range of prices, with tops selling at \$3.35, and the bulk at \$6.17@6.28½.

The receipts of live muttons were of very moderate volume all around. Locally a little less than 3,500 was made up entirely of lambs with the exception of one deck of ewes. The market was in strong, active demand for clipped stuff with lambs selling at \$6.15@6.25, top prices for the season for this class of stuff. Woolen lambs sold at \$7.25 and a few clipped ewes at \$5. The outlook is considered fair for the market of the week.

WARRICK.

Kansas City Grain Market.

FARMERS!

There's Land Waiting For YOU In NEW ZEALAND

The Paradise of the Pacific; Sixteen Days Steam from San Francisco

THERE IS ROOM FOR THOUSANDS OF SETTLERS

Rich Soil. Abundance of Water. No Droughts. No Snow-bound Winters. Mild and Equable Climate. A Land of Peace and Plenty.

New Zealand's WEALTH Per Head of Population is the Highest in the World.

ITS DEATH RATE IS THE LOWEST IN THE WORLD.

Government land is obtainable on easy terms, perpetual leasehold or freehold. Government assistance to new settlers. State loans to farmers at low rate of interest.

New Zealand is a magnificent dairy-land, meat-raising, lumber and wool-growing country. Last year the produce of the farms of New Zealand totaled a value of one hundred million dollars. New Zealand's butter, wool and frozen mutton fetch the highest prices in the world's markets.

New Zealand Railways are owned by the Government. Cheap freight and passenger rates. Government and Municipal ownership of public utilities. Government Trust Offices, Insurance, Savings Banks, etc.; Government Sanatoria and Hot Mineral Water Spas.

New Zealand is a region of grand and novel scenery. It is largely visited by American tourists who escape the rigors of winter.

A land of splendid sport. Trout-fishing and Deer-stalking. Thousands of miles of angling waters carrying the biggest trout in the world.

It is SUMMER in New Zealand when WINTER in America. New Zealand's summer is cool and enjoyable for traveling. Comfortable hotels. Good Transportation. Cheap rates.

YOU WILL FIND OUT ALL ABOUT NEW ZEALAND

by dropping a postcard asking for information and literature to

T. E. DONNE, Superintendent, Government Department of Tourist and Health Resorts, Mail Steamers from San Francisco to New Zealand Every Three Weeks.

Gasoline Engine Superiority

When a man invests in a farm power, he owes it to himself to get the best that can be bought for the money.

The modern business farm can no longer be successfully operated without a power of some kind.

The best, most economical, and safest farm power is a gasoline engine.

The best engine is the

I. H. C. Gasoline Engine.

Why? Well, because it's so simple, easily kept in order and operated definitely.

It develops the full rated horse power and sustains it against the heaviest load.

It is safer, cheaper and more efficient than steam power.

It is adaptable to any and every use requiring a power.

Among its many uses may be named:

Shelling, Husking and Shredding Corn; Grinding Feed; Cutting Dry Fodder and Ensilage; Pumping; Sawing Wood; Separating Cream, Etc.

I. H. C. engines are made in the following styles and sizes:

Vertical, 2, 3, 5 Horse Power.

Horizontal, Portable and Stationary, 4, 6, 8, 10, 12, 15 Horse Power.

If interested in powers in any way, go to the International Local Agent and have him show you the I. H. C. gasoline engine, and supply you with catalogues, or write for further information.

La Salle
Street
Station,
Chicago

Only one
on the
Elevated
Loop

Used by Rock Island-Frisco Lines

Have YOU ever been in CHICAGO?

If so, you know the extremely convenient location of La Salle Street Station.

If you are a stranger in the city, however, it is of great importance that you learn about this magnificent and comparatively new terminal, used jointly by Rock Island-Frisco Lines—C. R. I. & P. Ry. and C. & E. I. R. R.

It is nearest the heart of the city—closely adjoining the business section—within easy walking distance of State Street shopping center and all the principal hotels.

Another advantage of entering the city through La Salle Street Station is the second-story viaduct directly connecting the main waiting-room with the Elevated Railroad loop—you can reach the North, Northwest, West or South sides of the city by elevated trains for a five cent fare **without descending to the street**. You thus avoid the dangers and delays of the great, crowded city.

The Rock Island right-of-way into Chicago is elevated for more than eight miles out through the suburbs. Prompt arrival at Chicago terminal is thus assured. Englewood Union Station, seven miles out, affords ready access to southern suburbs—all through trains stop there.

Where you will land is an item to consider.

JOHN SEBASTIAN, Passenger Traffic Manager, Rock Island-Frisco Lines, CHICAGO and ST. LOUIS.

The Southwest Limited

was the first train to give first-class service between Kansas City and Chicago. In service and equipment it has no equal. Your patronage is solicited on these two facts by the

Chicago, Milwaukee & St. Paul Railway

If you doubt the first fact compare the service of to-day with that before The Southwest Limited entered the field. If you doubt the second fact a trial trip to Chicago will convince you of its truth. The Southwest Limited leaves Union Station 5.55 p. m.; Grand Avenue 6.07 p. m. Arrives Union Station, Chicago, 8.20 a. m.

Volume XLIV. Number 21

THE RAILROAD RATE BILL PASSES THE SENATE.

After one of the most notable contests of its history, the U. S. Senate on last Friday passed the bill conferring additional powers upon the Interstate Commerce Commission. There were but three dissenting votes. The bill received several amendments after it came from the House, which body it had passed by a vote almost unanimous, there being but four opposing votes.

It is conceded that most of the Senate amendments strengthen the measure. The most prolonged contest was over the court-review amendment. It is believed, however, that this amendment but expresses and defines the constitutional authority to review the findings of the commission.

The principal purpose of the railroad rate bill passed is to permit the Interstate Commerce Commission to fix rates. The provision conferring this authority is found in the fourth section of the bill which amends section 15 of the Interstate commerce law so as to accomplish this result. That section directs the commission to investigate complaints of unjust and unreasonable charges on the part of the common carriers in the transportation of persons or property, or of regulations or of practices affecting such charges. It also authorizes an inquiry as to whether the rates or practices are "unjustly discriminatory or unduly preferential or prejudicial or otherwise in violation of the act," and in case any of these conditions are found to exist, the commission is empowered to determine and prescribe what will be the just and reasonable maximum rate, and what regulation or practice is just, reasonable, and fair. Further authority is given the commission to enforce its orders, and they are to go into effect within thirty days and continue in force for two years unless suspended, modified, or set aside by the commission or by a court of competent jurisdiction. Other powers conferred by this section are to apportion joint fares, establish through routes and maximum joint rates and prescribe their division, and to determine the compensation to be paid to shippers doing service for carriers.

Section 16 of the present law is so changed as to provide for an award of pecuniary damages to complainants found entitled, and in case payment is not promptly made in accordance with this award, the beneficiary is authorized to file suit in a United States Circuit Court to compel compliance. The finding of the commission is to be received as *prima facie* evidence of the facts in such suits, and the petitioner is absolved from all liability for costs. Another provision renders legal the service of the orders of the commission through the mails, and provides that these orders shall take effect thirty days after service unless suspended or modified by the commission or suspended or set aside by the courts. A penalty of \$5,000 for each offense in disobedience of the order is imposed, and the penalty is to accumulate at the rate of \$5,000 a day in case of continuous violation. Orders other than those for money payments are to be enforced by the Federal courts through writs of mandamus or injunction, and in case of appeal to the Supreme Court these cases are to be given preference over all others except those of a criminal character.

The bill was intended by the Senate so as to give the United States Circuit Courts jurisdiction to entertain suits brought to annul or change the orders of the commission, and to provide

against the granting of interlocutory decrees without hearing, and making appeals from such orders direct to the Supreme Court.

Other provisions extend the definition of the word "railroads" so as to make it include switches, spurs, tracks, terminal facilities, freight depots, yards, and grounds, and defines the word "transportation" so as to make it embrace cars and other facilities for shipment or carriage, "irrespective of ownership or of any contract," the intention being to make the railroads responsible for all special car service. It is made the duty of carriers to furnish special car service upon reasonable request.

Senate amendments include oil pipelines, express companies, and shipping-car companies under the head of "common carriers," and make them amenable to the requirements of the bill. Other Senate modifications prohibit the issuance of passes or the granting of special favors to one class of passengers over another, prohibiting railroad companies from transporting commodities produced by themselves; require such companies to put in switches at the reasonable request of shippers; prohibit the granting or acceptance of rebates, and reinstates the imprisonment penalty for violation of the law.

There are also changes in the law relative to the reports to be required of common carriers and a penalty of \$100 a day is imposed for failure to comply with the report requirement.

The commission is given access to the accounts of the companies affected by the act, but examiners are forbidden, under penalty of heavy fine and long imprisonment, from divulging the facts ascertained. Fines of \$500 for each failure to keep proper accounts is provided. A falsification of accounts is made punishable by fine and imprisonment.

Circuit and District Courts of the United States are given jurisdiction over all complaints by the commission on failure to comply with its orders, and such courts are required to issue writs of mandamus compelling such compliance.

The bill will now go back to the House, where the Senate amendments will be considered. These amendments are believed to make the bill a more effective measure than when it left the House. There may be some discussion of various provisions; but the two houses are practically agreed on the leading features of the bill. They will doubtless concur in a wise and effective measure which will soon become a law.

The opponents of the bill had no hope of defeating it when it should come to a vote in the Senate. Their tactics heretofore have been by repeated delays and postponements to prevent a vote until adjournment killed the bill. But for the persistence of President Roosevelt in centering public attention upon this important subject, the program of delay would probably have been again effective.

The tremendous influence of the President as the exponent and leader of the people finally became irresistible and prevailed. It is worthy of note that in their desperation the apostles of delay placed the management of the bill in the hands of a Democrat, and that nearly all of the minority Senators supported the President in the contest. In common with most other Western Senators, Senator Long, of Kansas, was heartily with the President, and was recognized as a leader in the contest, not only to bring the bill to a vote, but in favor of such amendments and such only as would give an effective measure.

The bill was intended by the Senate so as to give the United States Circuit Courts jurisdiction to entertain suits brought to annul or change the orders of the commission, and to provide

RIGHTS CONCERNING STREAMS.

EDITOR KANSAS FARMER:—I live at the Junction of the Big and Little Blue Rivers. My farm lies on both sides of the river. The lines cross the rivers, that is, the rivers are a part of the farm. Is the river in this case a public way and has any person a right to boat up and down the river through my farm if I forbid him? Our county attorney seems to think the public has a right to the river. Please publish the law on this point. It will be a benefit to others. J. L. RODKEY.

Marshall County.

The ordinance of Congress of July 13, 1787, providing for the government of what was then called the "Northwest Territory" including the country north and west of the Ohio River, declared it to be a fundamental principle, forever unalterable, that the navigable waters leading into the Mississippi and St. Lawrence, and the carrying-places between the same, should be common highways and forever free. To make sure of this provision it was declared in no less than eight subsequent acts of Congress, that all navigable waters in the Western States and Territories shall be public highways. These precautions may have been deemed necessary in consideration of the fact that, according to the Common Law, a navigable stream usually meant only that part of the stream in which the tide ebbs and flows. The acts of Congress made applicable the Civil Law definition which extends the use of the term "navigable" to "any stream capable of and useful for commercial navigation."

So great pains on the part of Congress to declare the rights of the public on Western streams, capable of and useful for commercial navigation, almost implies the non-existence of those rights on streams not capable of commercial navigation.

The uncertainty in the minds of some with reference to these matters probably results from confusing the doctrine of riparian rights, namely, rights to the use of the water in a stream for domestic and industrial purposes with rights of navigation. Riparian rights apply to all streams, both great and small.

There are streams which are not navigable under any accepted definition from which no man has a right to exclude other persons. Thus the Kansas River is not used nor is it capable of use for "commercial navigation."

but the land under this river belongs to no individual; the surveys of the United States extended only to the banks or to the water's edge, and the fractional subdivisions bordering on the river were sold as such. Streams on which the surveys thus terminate are called "meandered" streams. Some of them are at times destitute of surface water, but their beds are "common" property, owned by the public. The upper Arkansas River is a prominent example of this class of streams. Streams not meandered were sold with the land, and control of their occupancy goes to the owner to the same extent as if there were no water flowing over the land owned. It is true that the owner of the land is bound under the law of riparian rights to abstain from wasting the water; he may not divert it from its natural channel to the hurt of others either above or below him on the stream, but he has the same right to protect his property from trespass or intrusion as if riparian rights did not exist. He may extend his fences across the stream, and may resort to all means of exclusion that he might use as to any other part of his possessions.

The Blue River was meandered only to the south line of Marshall County. North of that line the land under the streams was sold by the Government, and is subject to control by those who have succeeded to its ownership.

EAVESDROPPING.

EDITOR KANSAS FARMER:—Will you please answer through the columns of your valuable paper the following questions: What is the law regarding eavesdropping in Kansas? Is it punishable? If so what is the penalty? Is "rubbering" over the telephone considered the same as eavesdropping?

Cloud County.

J. T. S.

Flagrant and persistent eavesdropping may amount to a disturbance of the peace, an offence punishable under the laws of Kansas which provide, chapter 100, section 318, as follows: "Every person who shall willfully disturb the peace of any person, family, or neighborhood, shall upon conviction thereof be fined in a sum not exceeding one hundred dollars, or by imprisonment in the county jail not exceeding three months."

The Supreme Court held, 35 K. 387, that where the conduct complained of is directed primarily against some person other than the prosecuting witness and his family, and is wrongful and wilful, and the natural and necessary consequence of such conduct is to disturb the peace and quiet of the prosecuting witness and his family, the accused may be convicted.

Eavesdroppers are defined in the criminal law to be such persons as wait under walls or windows or the eaves of a house to listen to discourses, and thereupon to frame mischievous tales. The common-law punishment for this offense is fine and finding sureties for good behavior, as stated by Blackstone.

The term eavesdropping may well be applied to the detestable practice of listening to others' conversation on a party-line telephone. The sense of degradation which every right minded person must feel after such eavesdropping.

If, indeed, any right minded person were ever guilty of so detestable a practice—ought to be sufficient punishment to prevent repetitions of the act. Whether the courts would hold such offense punishable as a disturbance of the peace would probably depend upon the degree of disturbance inflicted. It is easily believable that such acts

might become so grievous as to be punishable at law.

On most party telephone lines there is a general call to which all may and should answer. This general call has many uses. On some lines frequented by tramps or other undesirable persons, the general call has been used to give notice all along the line of the presence of such persons. So, too, interesting news is communicated. A case was reported a few months ago in which the general call brought quick and abundant help in a time of need. A widow was disturbed at night by a drunken man who insisted on seeing her. She sent a general call along the line and stated the case. In a few minutes horses' feet were clattering over the road and neighbors were arriving armed with rifles, shot-guns, revolvers, pitchforks, rakes, neck-yokes, single-trees, etc.

The ethics of the telephone should confine all listening to messages intended for others strictly to those announced by the general call.

BURTON.

The Supreme Court of the United States rendered a decision last Monday sustaining the finding of the lower court in the case against Senator Burton, of Kansas, charged with receiving money for appearing before the Post-office Department in the interest of a St. Louis "get-rich-quick" concern, while holding the office of a Senator of the United States.

Such practice is forbidden by a law of Congress.

Five years ago J. Ralph Burton had been elected to the United States Senate. He had ability, ambition, opportunity. To-day he may well say that, without the fine of \$2,500 and the six months in jail to which he has been sentenced, his punishment is great. Ambition is shattered, opportunity gone.

It has been pleaded in extenuation that others have committed like offenses. Perhaps Burton is unfortunate in being the first victim of the awakening determination of the country to purge corruption out of high places of trust.

The court has granted sixty days in which to make application for a rehearing. This with other delays may carry the case over to near the end of Mr. Burton's term. It is intimated, however, that the Senate will declare his seat vacant. While drawing his salary as a Senator, he has not performed the duties of a Senator since his first conviction many months ago.

MEASURING HAY IN THE STACK.

EDITOR KANSAS FARMER:—Please give me the rule in THE KANSAS FARMER for measuring prairie hay in the stack. Also the number of cubic feet in a ton of prairie hay in the stack.

IVERSON NITTS.
Montgomery County.

G. E. Goddard, Cochrane, Alta Vista, gave to the Nor-West Farmer the following rule: "Add the width to the overthrow, divide by 4, square the result, multiply by the length and divide by 512. This will give you the number of tons after the stack has settled for thirty days. The advantage of this rule is that the shape of the stack does not matter. By adding the average width to the average overthrow, you practically put the tape round the stack. Taking a fourth of this gives you one side of the square, which, multiplied by itself, gives the square feet in the end of the stack. This again multiplied by the length, would, of course, give the number of cubic feet in the stack, 512 of which is the general measurement allowed to a ton here thirty days after putting up; or 420 cubic feet for hay that has been up over six months."

Roop's Commercial Calculator speaks of the number of cubic feet in a ton of hay as follows:

"The quantity of hay in a mow or stack can only be approximately ascertained by measurement. Good timothy hay, when thoroughly settled, will take about 350 cubic feet to make a ton. If only partly settled, from 400 to 450 cubic feet; while new hay will take 500 cubic feet and over."

ROAD WORK QUESTION.

EDITOR KANSAS FARMER:—Please answer the following question through the columns of the KANSAS FARMER: If a man works out his poll tax in an outside district and receives a receipt for the same can the road-overseer in his own district compel him to work out the tax again the same year?

Saline County. O. R. O.

The new road law enacted by the last Kansas Legislature places the roads of

the township under the control of the township board and requires such board to receipt for all labor performed on the roads. This new law specifically continues in force the old law which requires that each able-bodied man between the ages of 21 and 45 years do two days' work on the road each year. These two laws are not neatly joined together. The old law requires the road-overseer to receipt for work done in his district. The new law authorizes the township board to divide the township into not more than four road-districts, and to appoint an overseer to direct the work in each district, but it does not authorize such overseers to issue receipts for labor.

It is difficult to predict what construction the courts will put upon the overlapping provisions of the two laws. The latest enactment constitutes the township the unit with authority to subdivide it, and requires the township board to issue receipts for work done in the township. A fair construction would give credit and a receipt for work done under legal direction in any part of the township.

The case is not worth the expense of a lawsuit, and officers in charge should look at the equities and govern their actions accordingly.

BLOCKS OF TWO.

The regular subscription price of THE KANSAS FARMER is one dollar a year. That it is worth the money is attested by the fact that thousands have for many years been paying the price and found it profitable. But the publishers have determined to make it possible to secure the paper at half price. While the subscription price will remain at one dollar a year, every old subscriber is authorized to send his own renewal for one year, and one new subscription for one year, and one dollar to pay for both. In like manner two new subscribers will be entered, both for one year, for one dollar. Address, The Kansas Farmer Company, Topeka, Kans.

As THE KANSAS FARMER goes to press this week, a generous rain is falling upon the thirsty soil. To this time the season's deficiency of precipitation is about three inches. In Eastern Kansas the first crop of alfalfa is well grown; small grains are well advanced, and the opportunity has been used to press work with the corn well to the front. Fruit prospects are excellent. Live stock is in fine condition.

Miscellany

Morningglories vs. Corn.

"Morningglories!" What an appropriate name from the artist's viewpoint, but had the naming been left for a corn-grower, we should doubtless know this persistent pest by some less artistic but more emphatic title.

"Probably no other weed has so much to do with increasing the expense of growing corn as this hardy vine, every joint of which detached from the parent vine produces a separate healthy, and vigorous climber, ready to wind itself around and choke the life out of whatever stands within its reach.

"A facetious farmer told us recently that 'glories' pulled up and hung on the fence until thoroughly dried, then burned and the ashes thrown on the ground would produce a vigorous crop next year. Of course this is overdrawn, but it illustrates the almost life-everlasting qualities of this pest.

"To the corn-growers of Illinois, Iowa, Missouri, Kansas, Nebraska, in fact, in all the corn-belt, where the land is becoming more and more valuable each year and must be made to produce profitable crops to pay an interest on the investment, the solution of this problem, 'Morningglories vs. Corn,' is of vital interest."

The above is from an interesting pamphlet just received from the Emerson Mfg. Co., Rockford, Ill., which suggests an easy way to free your corn-fields of this pest.

The company will send to every reader of THE KANSAS FARMER who will send the names and addresses of three or more of his neighbors who are bothered with morningglories, not only the pamphlet above mentioned, but a free copy of the most excellent book, "How to Grow Corn." It is well worth your while to take advantage of this offer, for if THE KANSAS FARMER can be instrumental in assisting the corn-growers to conquer this troublesome pest, it will feel that it has performed a service that will be heartily appreciated by every corn-grower in this State.

**THE FARMERS
HANDY WAGON**

This wagon is just what its name implies—a wagon for the farmer and "handy" because it can be used for all farm purposes, it beats anything on wheels for convenience and utility. Bad roads are no obstacle and there's no reasonable load that it won't carry. When buying a handy wagon be sure of one point, viz., that it's **MADE IN SAGINAW**. Then you will get the best in material, workmanship, durability, strength, everything in fact for there is no low wheel, wide tire, short turn, light draft farm wagon made that equals ours. Our prices are reasonable. Send for catalog.

FARMERS HANDY WAGON CO., SAGINAW, MICH.
Makers Handy Hay and Stock Racks and Handy All-Steel Frame Silos.
Branches, Kansas City & Des Moines.

ciated by every corn-grower in this State.

The Farmers' Independent Grain-Dealers of Kansas, Nebraska, and Oklahoma.

EDITOR KANSAS FARMER:—The Farmers' Independent Grain-Dealers' Association of Nebraska, Kansas, and Oklahoma, the greatest cooperative effort ever undertaken in the Central West, will hold three meetings as follows: At Enid, Okla., May 31, 1906; at Hutchinson, Kans., June 7, 1906; at Lincoln, Neb., June 14, 1906. Able speakers will be in attendance, and the following program is presented. It will be divided up and carried out as nearly as possible, and completed at the three meetings:

"Economic Production and Distribution of Farm Products," C. W. Peckham, Haven, Kans.

"To What Extent May the Farmer Be Benefited by Cooperation?" E. M. Black, Preston, Kans.

"The Farmers' Elevator Manager, His Duties and Responsibilities," F. L. Farnsworth, Cullison, Kans.

"What Shall We Do to Be Saved?" (from the Grain Shark), J. H. Johnk, Solomon, Kans.

"The Farmers' Elevator, as an Economic Quality," W. W. Bowman, Pawnee Rock, Kans.

The following gentlemen will present papers on subjects of their own choosing: Chas. Radenberg, Claffin, Kans.; M. Parkhurst, Kinsley, Kans.; L. E. Ross, Carmen, Okla.; E. E. Van Slyke, Red Rock, Okla.; W. H. Smith, Alva, Okla.; E. E. Benfield, Prosser, Neb.; Geo. E. Miller, Prosser, Neb.

Every farmers' elevator company west of the Missouri River is urged to send delegations to these meetings, to the end that pending arrangements affecting the marketing of this year's crop will be perfected. Farmers, we need your help. You need ours. Negotiations for special railroad rates are pending, and the most favorable rates are expected. Ask for a certificate when you purchase your ticket. Come!

C. W. PECKHAM, Pres., Haven, Kans.
E. M. BLACK, Sec., Preston, Kans.

when you buy our vehicles. Not a mail order house or agent. And you can buy just as safely from us as from any local dealer. Be sure you send for catalog. We make it all plain there. **We pay the freight.** Address Dept. D. The Apex Mfg. Co., Bloomington, Ill.

Agriculture

To Rid Alfalfa of Weeds.

This spring I sowed alfalfa on corn-stalk ground and secured a good stand, but the weeds are coming up thick also. How shall I handle this pile of alfalfa to best get rid of the weeds? Shall I cut it early or late?

W. F. SCHUERMAN,
Dickinson County.

Do not be in any hurry to cut the weeds on the newly seeded alfalfa-field. It is better to let the alfalfa get well set and make considerable top growth before the mower is run over the ground. It is well, also, to mow the weeds on new alfalfa during a period of wet weather. Raise the sickle three or four inches high so as to cut off the young plants. Unless the weed-growth is very rank and heavy, it is not necessary to remove the weeds from the ground.

Although too early or too frequent cutting the weeds on alfalfa ground may not be desirable, neither is it desirable to leave the weeds until they have made a rank, thick growth which will tend to smother the alfalfa and leave the tender plants exposed to the hot sun when the weeds are cut. In cutting the weeds on newly seeded alfalfa, the purpose should be to clip the weeds often enough and at sufficient height so as to keep the alfalfa from being shaded and smothered by a rank growth of weeds. It is not advisable to cut the first crop of weeds close to the ground, especially when the weeds have made a rank growth and are approaching maturity. The tendency will be, of course, to destroy that crop of weeds, but the cutting of the alfalfa plants close to the ground weakens them also, and another crop of weeds will start, including such weeds as crab-grass and fox-tail, and often this second growth of weeds will injure the alfalfa more than the first, and it is practically impossible to destroy crab-grass or fox-tail by mowing. The purpose should be, therefore, where crab-grass or fox-tail is prevalent, to prevent the crab-grass or fox-tail from starting by leaving the undergrowth of weeds and alfalfa, which is accomplished by raising the sickle bar several inches above the ground, as stated above. I have known of excellent stands of alfalfa being entirely destroyed by a single close cutting during hot, dry weather, while upon a part of the same field which was not mowed, but on which the weeds were allowed to grow and were not cut during the season, the alfalfa made a good stand.

I would answer your question in this way: That you should cut the weeds on this field as soon as they appear to be shading or smothering the alfalfa, and that at two or three intervals during the balance of the season the mower he used, as it may appear necessary. Probably this alfalfa will make so rank and rapid a growth that by the time it is necessary to clip the weeds the third time, the plants will have developed sufficiently so that the alfalfa may be cut for hay, and this may be done without injuring the alfalfa, provided the young plants have reached the stage of maturity when alfalfa should be cut for hay, namely, after the plants have begun to bloom. When alfalfa has made such a growth it may be cut close to the ground without injury to the plants. It is preferable, however, to cut this first crop of hay during a favorable period of weather, when the soil is rather moist. Hot, dry weather immediately after cutting may sometimes enfeeble or destroy some of the alfalfa plants.

Last season at this station we cut two crops of hay from early spring-seeded alfalfa, and the weeds were clipped twice previous to the cutting of the first hay-crop. Both crops of hay were rather weedy and the yield was light. This alfalfa passed through the winter in good condition and the first crop is now (May 15) nearly ready to cut for hay.

A. M. TENNEYCK.

Information Regarding Field-peas.

Will you kindly give me information regarding field-peas. I wish to sow five acres. Where can I get the seed, and how much will be required to plant an acre? C. W. HOOKER,
Kingman County.

It is now getting rather late (May 15) to sow field-peas. The crop should have been seeded the last of April or first of May. Field-peas are really a crop which is better adapted for grow-

ing in the Northern States than in Kansas and in the States further south, and if sown in this State it is well to plant rather early in the spring. At this station we usually plant field-peas soon after the seeding of early spring grains. Prepare a seed-bed the same as you would prepare for sowing any small grain. The peas may be sown broadcast or with the grain-drill. Some drills break the peas badly, while others plant them in good condition. Set the drill to sow about two bushels of oats per acre; it will require about a bushel and a half of seed-peas to plant an acre when seeded in this way. In a well-prepared seed-bed cover the peas to a depth of three inches. The crop should be given little or no cultivation; it is possible to harrow the field before the peas come up, but later harrowings destroy the plants.

Field-peas are rather difficult to harvest for forage, since the vines often lodge and are difficult to cut with the mower. It is usually advisable to seed the peas with oats or some grain-crop, the grain tending to hold the pea-vines off of the ground, so that the crop may be readily cut with the mower. The combination of peas and oats makes a very good fodder. It will be necessary, however, to seed the crop early in the spring in order that the grain may grow successfully with the peas. When sown in combination, it is usual to sow 3 or 4 pecks of peas with about a bushel of oats per acre. If you want to sow the peas for seed-production, thinner planting may be advisable.

Varieties of field-peas commonly grown are the Yellow Canada and the White Canada. The Green field-peas are also a good producing variety at this station. You can secure seed from almost any seed-dealer.

For your part of the State cow-peas are better adapted for growing than field-peas, and it is yet early for seeding cow-peas. For information regarding the planting and culture of cow-peas, I enclose copy of a circular letter answering questions on this subject.

A. M. TENNEYCK.

Bacteria for Alfalfa-Field.

I would like to secure information concerning bacteria to inoculate the soil in alfalfa-fields, where to obtain and how to use it. I have a field of alfalfa which does not seem to be doing well, there being no tubercles on the roots. I would like to get culture to inoculate twenty acres.

C. B. GUFFY.
Pottawatomie County.

Probably the only way in which you can successfully introduce the bacteria into the soil of the field in question will be by distributing infected soil taken from some old alfalfa-field. It would have been well to have spread this infected soil early in the spring and mixed it with the soil of the field by disk-ing and harrowing. This may be done now, immediately after taking off the first crop of alfalfa.

If you can secure soil from some old alfalfa-field not far from your neighborhood, I would recommend to use a considerable quantity of the infected soil, say six or eight hundred pounds per acre. The usual method of distributing the infected soil is to sow by hand. Usually on new seeding, two to three hundred pounds of the infected soil per acre is sufficient to use.

The nitro-culture preparations may only be used successfully in inoculating the seed before planting. I have mailed you copies of letters giving further information regarding the inoculating of soil with alfalfa bacteria, both by the use of nitro-culture preparations and with infected soil.

A. M. TENNEYCK.

Seedling Alfalfa.

Last spring I sowed four acres of Brome grass and alfalfa according to your instructions for pasture. The Brome seed was not good, and is a thin stand, but the alfalfa is fine. Will the Brome grass thicken and increase?

We want to sow six acres of alfalfa for hay this spring. The ground was plowed last fall, and dragged to keep down weeds and conserve moisture. It has been harrowed twice this spring. Will disk-ing once and harrowing put it into good condition for seeding?

Please give me all the information you can on alfalfa, Brome grass, and English blue-grass, and send bulletins.

W. A. OSLER.

Smith County.
It may not be necessary to disk the ground which you describe in preparing a seed-bed for alfalfa. If the weeds have started, it may be necessary to disk and harrow as you have

suggested, but I would not advise to loosen the ground very deep, not over two inches, if it is possible to disk so shallow. A better implement than the disk harrow to prepare this ground is the Acme harrow. The Acme harrow is an excellent weed-killer and a good cultivator, but it does not necessarily loosen the soil so deep as it would usually be loosened with the disk harrow. The seed-bed for alfalfa, as you understand, should not be too deep and mellow, but rather only mellow about as deep as the seed is planted or a little deeper and below the seed the ground should be rather firm, making good connection with the subsoil so that the seed and young plants may secure an abundant supply of moisture, which has been stored in the deeper soil. With such a condition of seed-bed the seed may sprout and the alfalfa start with little or no rain.

I would have preferred to sow the alfalfa earlier in the spring. Later seeding is more apt to be injured by heavy rains which pack and firm the soil at the surface, or by hot weather, which may destroy the young plants before they are strong and well rooted. However, the field in question, which was fall plowed and has been harrowed several times during the spring, ought to be in good physical condition for starting alfalfa, provided the weather conditions are not too unfavorable after the seeding.

I have requested Professor J. T. Willard, director of the station, to mail you bulletins giving information regarding alfalfa and the grasses which you have named.

Referring to your last spring's seeding, Brome grass will gradually thicken up and occupy all space not filled with alfalfa, and the grass will doubtless finally crowd out the alfalfa, although this will not occur for several years.

A. M. TENNEYCK.

How to Kill Johnson Grass.

I should like to learn how to kill Johnson grass. We have a rich garden spot which has become infected with it. It is impossible to cultivate it out, for it is so deep rooted. I had thought of mulching it heavily with wheat straw. The seed was sown on an adjacent plot a number of years ago, having been recommended as an excellent grass for hay and pasture, but it has proven good for nothing. I saw it advertised in some agricultural paper not long ago. I hope no reader of the Kansas Farmer will experiment with it, for it is a nuisance.

Allen County. CHAS. M. FUNK.

It is almost impossible to entirely eradicate Johnson grass where it has once obtained a foot-hold, provided the soil and climate are favorable for its growth. At this station we have little difficulty in destroying the grass, because it is not perfectly hardy and will often winter-kill. Possibly in your section of the State the grass may be destroyed by winter-killing, provided it is not protected with a cover of trash or manure. Although under field conditions it may be very difficult or practically impossible to eradicate the grass, as is the general statement of those who have had experience, yet it seems to me you should be able to destroy the grass in a garden spot. I know of no weed that can not be destroyed if the plants are not allowed to grow above the ground, but are kept continually cut with the hoe. It might take two or three seasons of careful hoeing to entirely destroy the grass, but it surely may be destroyed in this way. Perhaps your garden is something like other gardens which I have observed, well cultivated during the early part of the season but neglected during the latter part of the season, when the grass makes a renewed growth and gets a good start so as to store up nourishment in the roots to continue the growth and propagation another season.

A. M. TENNEYCK.

Varieties of Alfalfa Profitable for Forage-Production.

How many varieties of alfalfa are there that are profitable for forage-production? How may they be distinguished? If there is any difference, which is the best? Will alfalfa seed grown on irrigated land germinate as well as seed grown on unirrigated land? On April 4, 1905, I sowed Bromus Inermis on spring plowing, sowing about 12 pounds of Brome grass and 4 or 6 pounds of alfalfa-seed per acre, but failed to get a good stand.

On the same day I sowed alfalfa on fall plowing, 16 pounds per acre, and secured an excellent stand. I write this simply to give you my experience, thinking perhaps you would like to

have farmers' experience in different parts of the State. E. S. RALSTON,
Cloud County.

Two varieties of alfalfa are generally recognized in this country, namely common alfalfa and Turkestan alfalfa. The Turkestan alfalfa is really only a strain of common alfalfa, which has been grown in the dry plains of Turkestan until it has become adapted for growing under these climatic and soil conditions, and this strain of alfalfa when sown in our Western Plains region seems to be a little hardier and better adapted for growing under the dry climatic conditions of the West than common alfalfa. Also the Turkestan alfalfa is harder to resist cold than the common alfalfa, and may be successfully grown further north, being hardy and productive in North and South Dakota, where common alfalfa usually winter-kills.

At this station the Turkestan alfalfa has not produced quite so large crops of hay as the common alfalfa. At the Hays Experiment Station, in Ellis County, Turkestan alfalfa sown a year ago on the upland has made an excellent stand and promises a large crop of hay this season. The common alfalfa has been grown at the Hays Station for several years and does well on the bottom-land. The common alfalfa is being grown successfully not only in Ellis County, but in Trego, Gove, Logan, and Wallace Counties, as I learned by a trip through these counties two weeks ago. Some even have succeeded in growing alfalfa successfully on the upland in the above named counties, but usually the crop is being grown on bottom-land.

In my judgment there is little difference between Turkestan alfalfa and common alfalfa, other than that the seed of the true Turkestan alfalfa came originally from Turkestan. The plants of the two varieties look almost exactly alike. I believe that the common alfalfa grown and seeded in the West for a few years may be as hardy and as well adapted to Western conditions as the imported Turkestan alfalfa.

From actual experience I can not answer your question regarding the relative vitality of alfalfa-seed grown by irrigation as compared with seed grown in dry climate without irrigation. We have been intending to make a trial on this point at the Experiment Station, but have not yet undertaken this experiment. From examination of different samples of seed and also from general tests of the germination of seed without any special reference to whether it was grown under irrigation or not, I conclude that a good quality of alfalfa-seed grown by irrigation is just as vital and just as capable of germinating as seed of a like quality grown without irrigation. As a matter of fact, however, the seed grown without irrigation is often inferior in quality compared with the seed grown by irrigation. Usually there is a larger percentage of shrunken seeds in the alfalfa which has been grown on dry land. For seeding in this part of the State, I prefer to use seed of good quality and of high germinating power, without much reference to whether it was grown by irrigation or otherwise; but if I were to sow alfalfa in Western Kansas on dry land where it could not be irrigated, I would prefer to sow seed which had been grown under similar conditions, not because such seed would germinate better than other seed, but rather because having been grown and produced under similar conditions, such seed will produce plants which are likely to be more hardy and better adapted for growing under the same conditions again.

A. M. TENNEYCK.

To Destroy Thistles.

Not quite a year ago I wrote you for information regarding ridding pastures of thistles. You kindly responded with much valuable information. I carried out your suggestions so far as I had time and feel that I have taken first steps toward ridding the pasture of this pest. I write to ask your opinion concerning the following method of combating them: Hoe them up, hoeing deeply, as soon as the plants are large enough to distinguish, then wait until fall, say September, when a second growth will have appeared, and again hoe them up thoroughly. This is claimed to be a sure method of destroying them for good. I am interested to know whether the college has ever known of this treatment being used, and if so whether it was successful or not.

C. D. SMITH.

Marshall County.

Doubtless two thorough hoeings a year, as you suggest, will largely de-

stroy the thistles in the course of two or three years. It may be necessary, however, to go over the ground with the hoe during the summer in order to destroy such thistles as may escape the spring hoeing. The main object is not to allow any more thistles to seed. When you destroy a plant by cutting its root deep in the ground that plant is gone, and the thistles will only be renewed by the sprouting of seed which is already held in the soil. I know that hoeing thistles has been entirely successful in destroying them on small fields.

A. M. TENNEYCK.

Infected Corn.

EDITOR KANSAS FARMER:—I have this morning received from W. J. Janney, of Burlington, Kans., a sample grain of germinated corn from the field, and with it a specimen of a small ground-beetle known as Clivina, apparently the species impressifrons. The beetle has no common name, but belongs to an extensive family that is well known to contain chiefly carnivorous species. Any departure from the carnivorous habit in a member of this family (Carabidae) is well worth noting, but it is especially important that we shall become acquainted with any species thereof, that display any tendency to destroy sprouting corn, as several kinds of these beetles are among the most abundant insects in plowed fields the State over.

Mr. Janney evidently believes this Clivina to be responsible for the destruction of the sprouting corn in his 80-acre field, as he sends the beetle with his letter of inquiry, but it is difficult for me to believe that he has found the right insect.

The object of this note is to request that farmers who observe any injury to germinating seed-corn will send abundant specimens of the insects found in connection, mailing them in a baking-powder can or other tin box addressed to the Entomologist, Experiment Station, Manhattan, Kans., and thus give us material aid in the solution of a very important question.

E. A. POPENOE.

Alfalfa on Limestone Soil.

Please send me your Bulletin No. 114, on growing alfalfa in Kansas. How is Butler County for alfalfa-production? How is soil underlaid with lime rock for alfalfa?

F. E. BAILEY.

Buffalo County, Nebraska.

The supply of Bulletin No. 114 is exhausted, but you will receive a copy of Bulletin No. 134, on "Seeding Alfalfa and Saving Alfalfa for Seed." This bulletin has not yet been published, but will be mailed in a few days.

Alfalfa is well adapted for growing in Butler County. Col. J. W. Robison, Towanda, Butler County, Kansas, has thousands of acres in alfalfa.

Soil underlaid with limestone rock, provided the rock is not too near the surface, should make excellent alfalfa land. Alfalfa is a heavy feeder on the mineral elements of plant-food, and requires an abundant supply of lime in the soil. Ideal conditions in this respect are secured in a soil which has been formed by the disintegration of limestone.

A. M. TENNEYCK.

Alfalfa on Alkali Land.

I had thought of sowing alfalfa on some alkali land. Would you advise that this be done?

GEO. M. HULL.

Saline County.

I have had no experience in sowing alfalfa on alkali land. If the alfalfa could be started on such land, I believe that it is as likely to stand as any other crop which you can grow. The difficulty will be to start it, as the young plants will probably be destroyed by the alkali early in their growth. Probably if such land could be plowed deep about a year to six months previous to seeding, then receive a dressing of manure, which should be well disked into the surface soil, it could be put into such condition that the alkali would not bother much for a season, during which the alfalfa might be started and well established. As to whether the alfalfa would continue to live and grow in such soil when once started will depend upon the amount of alkali in the soil, and also upon the tendency of the land to accumulate alkali. If such land is not well drained, and the drainage of the surrounding country tends to carry on to the land more of the soluble alkali salts, then the alkali may continue to accumulate and increase in amount, above that which is removed by the crop, in which case it will be only a matter of time until all vegetation on such land will be destroyed.

If this is the white alkali, it is much less likely to destroy the alfalfa-plants than the black alkali. I would advise

SAVE HALF THE TIME

Half the Work

The farmer who is looking for machines that will do his work in less time—
that will increase his working force one-half by enabling him to do the same work in half the time, can not afford to overlook the time-saving features and up-to-date improvements embodied in the

Do Better Work

"St. Joe" Double Row Disc Cultivator

This improved cultivator is equipped with our new patent **Seat Board**, which runs on Rollers and will adjust itself much easier than any other seat board—a vital point in its favor. **Four Levers** make this machine handy to operate—always under complete and perfect control. **Four Coil Springs** are used—two to assist operator in raising Discs, two to cushion the Shovels when striking obstructions. **Adjustment** is simple and easy—to suit the work—we describe how this is accomplished in our free circular which the farmer can have simply by asking for it. Tells of more good cultivator features than any other machine on the market has. Write for the circular to-day and see how this machine saves you time and money.

that you try seeding alfalfa on this land in a small way, and I should be pleased to know the results of the experiment.

A. M. TENEYCK.

Frosted Alfalfa.

Will alfalfa bloom as usual after being frosted? We had a hard frost here. Should alfalfa be cut at once or wait until the usual time? F. M. BROWN.

Butler County.

If the alfalfa has simply been checked by the frost and the plants have not been killed to the ground, I would not cut it until it has reached the stage of maturity to make the best hay, namely, about the beginning of the blooming period. There is no reason why the alfalfa will not bloom, although, if the plants have received a severe check, the blooming is likely to be a little late, and perhaps the number of blossoms will be less than would have been the case without injury by frost. However, your judgment as to whether or not it is best to cut the alfalfa now should be of more value than my suggestions. If the plants do not seem to recover from the effect of the frost in a few days, possibly it would be best to cut the alfalfa and allow it to start a new growth, even though the present crop may not be of much value for hay.

A. M. TENEYCK.

Rust on Wheat.

Can you explain why some fields of wheat are badly affected with rust while adjacent fields are but little affected? Are some varieties of wheat more susceptible to rust than others? If so, what kind would you advise sowing in order to avoid this disease? I have two varieties, sowed at the same time, and one field is badly affected, while the other is not.

Neosho County. SILAS HUMMER.

Some varieties of wheat seem to be more rust-resistant than others. This is particularly true of the durum wheats. Probably the hard red Turkey or Russian wheats are somewhat more rust-resistant than the varieties of soft wheat grown in this State. You did not state in your letter what different kinds or varieties of wheat you had sown.

Other conditions may also affect the development of rust. For instance, if the wheat on one field started a little earlier than the other, due to more moisture in the soil or better conditions for growth, the grain may have become infested with rust last fall and the fungus, living through the winter, developed early in the spring and rapidly spread, infecting the whole field. Doubtless, the adjacent field will be as badly infected a little later.

So far no remedies for the prevention of rust have been discovered. Certain soil and climatic conditions evidently favor the development of rust, but there is no way to absolutely destroy the fungus or to prevent its attack. It is now known that the fungus passes the winter in the straw and stubble, and the burning of the stubble has been recommended for destroying the rust spores. But the fact that rust develops so rapidly and is so easily spread with the winds makes it practically impossible to prevent its ravages to any appreciable extent by a local destruction of the spores, by burning the straw or stubble on certain infected fields. Probably the only remedy will be to breed rust-resistant varieties.

Early-maturing grain is usually less attacked by rust than later-maturing grain or later-maturing varieties. This is especially true of oats and barley. It is advisable, therefore, to grow varieties of oats and barley which mature early. I can name no particular variety of wheat, oats, or barley which may be considered "rust-proof." This name is sometimes attached to different varieties of grain, and it may be true that certain varieties of oats and other grains are less susceptible to the attacks of rust than others, as stated above. However, the difference in the date of maturity of the grain is probably one of the main factors which determines whether or not it rusts badly, the earlier-maturing sorts escaping the attacks of rust in a large degree.

A. M. TENEYCK.

Curing Alfalfa.

It should always be borne in mind that curing hay is one thing and drying it quite another. By the ordinary methods, hay is dried to a crisp in the swath and windrow, and then hauled in. This is a very expensive method to follow with alfalfa. It results in a loss of a large proportion of the leaves, and still the hay is not cured. All of the legumes, especially, need to be cured away from the sunlight and heat. To do this effectively, we rake into windrows as soon as it is wilted

enough to handle well on the rake. It is still quite green and the stalks are full of juice. It is then cocked up in about 100-pound cocks and covered with the cotton cloth hay-cap with weights at each corner. The alfalfa goes through the first sweat in the cock, is away from the rays of the sun, and really cures, keeping its bright green color and retaining all its protein. It remains thus from three to five days. If rainy weather sets in, it stays in the cock until a clear day, when it is opened to the sun for an hour or so and then hauled into the barn or to the stack. Handled in this way, we believe Eastern-grown alfalfa contains greater feeding value than that harvested in the irrigation districts. We are certain we have seen none anywhere that is of finer color and quality than the cap-cured alfalfa of Wisconsin.—Hoard's Dairymen.

Gasoline Engine in Irrigation Work.

Below is given a table from a paper of the United States Geological Survey entitled "Observations on the ground waters of Rio Grande Valley." This table shows the results of tests of a number of plants used for irrigation in the valley of the Rio Grande in Eastern New Mexico and trans-Pecos, Texas.

Under the head location is given the post-office nearest the ranch on which the pump is located. The fuel used by these pumping plants is gasoline which term as here used includes the "distillate" manufactured from Texas Crude Oil, which is extensively used for fuel purposes. Its calorific value is somewhat less than the gasoline used in Eastern States. The price of gasoline is given in cents per gallon in barrel lots.

In all of the plants except the one of E. J. Hadlock, water is raised by means of centrifugal pumps which are usually coupled to the top of the well casings.

This table shows in a striking manner the adaptability and cheapness of the gasoline engine for this purpose.

The Place for Large Yorkshires in American Swine Husbandry.

J. J. FERGUSON.

In this country we now have something like twenty recognized breeds or well-defined types of swine, each supposed to possess certain peculiar or special characteristics fitting them in a superior degree for certain uses or rendering them especially adapted to thrive under special conditions. Multiplicity of breeds and types is due perhaps primarily to the whim or fancy of the breeder, but is also largely dependent upon the wide variation in conditions of soil and climate over the country. In our wide extent of territory with diversified conditions of soil and climate resulting in a wide range of crop-production, we naturally find a wide difference in the character and quality of the hogs produced in different sections. This is true to the extent that we may readily divide the hog-producing territory into well-defined areas, each presenting what is practically a distinct and characteristic type of swine. For example; the lard hog of the corn belt is the result of abundant supplies of feed rich in fat-producing materials. Continued experience has demonstrated that the lard-type hog, while undoubtedly the most profitable type for the corn-belt, may not in all cases give the farmer of the Eastern or Northwestern States the largest net returns. In the Northwestern States where the supply of feeds is of such character that they tend rather to the production of lean meat than of fat in excess, it is more difficult to develop the lard type of hog to the highest point of excellence. At the same time these feeds are such that they will produce a profitable type of hog admirably suited for certain markets where the heavy hog is no longer wanted. [In the alfalfa-producing regions of the West, the conditions are

excellent for the production of lean meat.—EDITOR KANSAS FARMER.]

In the States outside of the corn-belt proper, and especially in those of the Northwest, where corn is produced only to a limited extent, wheat, peas, and barley, all nitrogenous or muscle-forming foods, may be grown abundantly, hence the farmers in these States may properly decide to meet the conditions already at hand and produce the type of hog which has been found to give best results under like conditions in older sections of the country.

The high degree of excellence in bacon production from Denmark, Great Britain, and Canada where the supply of feed is quite similar to that in the Northwest demonstrates the desirability of handling the type of swine which has given profitable results in those countries. In these same countries it would be a mistake for the farmers to introduce and persist in breeding the lard-type hog since not only would it be impossible to maintain a high standard of the type under their conditions, but seeing that a high class of bacon hogs fitted for the finest export trade may be produced, it would be a mistake financially.

Each of our large market centers has practically its own standard or type of market swine. Of late years the various types have gradually been narrowing down to one uniform type which will give best results, not only to the producer and packer, but which is also most desirable for our modern markets.

Until recently our domestic markets demanded heavier meats than those called for by the British consumer. The British market has demanded lighter, leaner meats, finished at early weights. The heavy hams, shoulders, and fat backs of the lard hog find slow sale in Great Britain. When we seek bacon hogs suitable for the production of export-bacon sides, we must look outside of the corn-belt for the type that is most desirable. While it is true that under favorable conditions, some desirable bacon hogs may be produced in the corn-belt, we can not reasonably expect this seeing that they have been bred persistently for widely different purposes. In the last ten years our home markets have undergone a decided and permanent change. The American consumer has learned that tender, juicy ham and bacon are among the most palatable and nutritious food-stuffs available if produced from animals not overloaded with fat. The most critical American trade is calling for practically the same grade of ham and bacon as is demanded by the British consumer. Without doubt the tendency will continue in this direction; consequently we turn to the bacon hog to fill the requirements. An ideal bacon hog must be smooth and even throughout and with a smooth, even covering. The back should have an even covering of fat running from three-fourths to one and one-fourth inches in thickness, evenly laid from the crest of the neck to the tail head and not thickening into a heavy patch behind the shoulders or over the loins. Given first-class bacon hogs, the packers, with their present perfected facilities for curing and handling the product and placing it upon the European markets, would, without doubt, soon command for the American farmer prices which would compare favorably with those now paid for the finest English and Danish hogs.

As to the cost of producing bacon hogs; while numerous experiments at Canadian experiment stations have shown that under their conditions, bacon hogs cost no more per pound to produce than hogs of the lard type, it is only fair to say that Canadian conditions are more favorable for bacon hogs than are those in the American corn-belt, but Minnesota and North Dakota having conditions the same as Canada, results will be the same; so the farmers outside of the corn-belt, and especially in the Northwestern States, where nitrogenous feeds are abundant and cheap, can produce hogs at a cost which will compare favorably with the cost of heavy hogs in the Middle Western States. We are satisfied it will pay hog-raisers everywhere not producing pure-bred animals, but hogs for market only, to introduce some bacon-type blood in their herds. It is a well-known fact that where corn has been fed continuously for generations, swine have become deficient in bone and muscle and lacking in ability to yield a reasonably large proportion of edible, juicy, lean meat in their carcasses. In such cases, experiments already tried have demonstrated conclusively that it will pay to use bacon-type sires for one or two crosses. It was once

thought that desirable firm, light bacon sides might be secured from undersized, underfinished lard hogs. This experiment was unsuccessful and the work has been discontinued. The most desirable cross, if a cross be desired, is with a Yorkshire boar and a Berkshire sow. The large Improved Yorkshire has many qualities to recommend him as the ideal bacon-type hog—first his color is the best: white hogs dress out cleaner and yield more attractive carcasses than hogs of other breeds. They are remarkably prolific, the writer having seen in his own experience numerous litters of sixteen to eighteen pigs with an average covering ten years of more than ten reared. Yorkshire dams are remarkably good mothers; hence, we find the young pigs are started so well in life that at 8 weeks old they should be heavier than pigs of other breeds. Some charge the Yorkshire breed with being slow in maturing, in view of the fact that a thrifty Yorkshire will take on weight until the age of 4 or 5 years, but compared with other breeds at the age of 8 to 10 months, which is the most desirable age to fulfill the packers' demand for bacon products, I am satisfied that they can not be surpassed for rapidity of growth and development.

As to their place in the United States; I do not recommend their general introduction all over the country to the exclusion of present types, which in many cases are producing maximum results with great profits. In any section of the Northwest where the production of bacon hogs is already a well-established and profitable industry, the Yorkshire is strongly in demand, and this demand will continue as the requirements for bacon types are constantly increasing.

The writer bred and handled large Yorkshires and their grades and crosses for ten years on his own farm and is thoroughly familiar with them from the farmer's point of view. Several years subsequently spent in careful study of our breeds of swine from the market standpoint in the world's greatest packing business is referred to merely to assure the American farmer that the opinions here expressed are founded on actual experience and fact.

Mr. Andrew Boss, professor of animal husbandry at the Minnesota Agricultural Experiment Station, endorses the Yorkshire breed in the following letter to Swift & Company, South St. Paul, Minn.:

"I am glad to see that you are interested in inducing the farmers of the Northwest to grow better hogs. I have been an admirer of the Yorkshire breed ever since I learned their good qualities. They are adapted to general farm conditions. I think their prolificacy and good breeding qualities make them a very desirable farmer's hog. . . . In our experience with them they have averaged I should say from three to five pigs more per litter than the lard type of hogs. . . . The feed raised on Minnesota farms is well calculated to make a first-class quality of bacon, and I believe that the product of flax, wheat, and cornfields will yield more profit per acre if fed to the bacon-type hog than it will if fed to any other class of stock."

Swift & Company, of South St. Paul, Minn., endorse the Yorkshire breed and have for some time been encouraging the farmers of the Northwest to produce more bacon hogs to help fill the increasing demand of this class of product.

Gossip About Stock.

Volume 41 of the American Poland-China Record is just received. It contains records of boar pedigrees numbered 100001 to 101901 inclusive, and sow pedigrees numbered 249002 to 256000 inclusive. Secretary W. M. McFadden, Union Stock Yards, Chicago, will be able to supply this book to breeders.

Chas. Storms, of Goffe, Kans., one of the younger breeders of Duroc-Jerseys, has some nice spring litters of pigs. He is not doing much at the business this year, owing to the fact that he has not the facilities to handle it properly, but he will move this fall to a farm better adapted for raising pure-bred pigs, and will then go into business on an extensive scale.

H. J. Northrup, of Frankfort, Kans., has some fine spring litters of Poland-China pigs. He takes good care of his hogs and he will have some bargains this fall to offer to the public. Mr. Northrup has recently added a Nemo L's Duke boar to his herd, which is one of the finest individuals we have seen this season, and if no ill luck overtakes him, we predict that he will be one of the notable herd-sires of the breed in Kansas.

This week we start the advertisement of Col. John Brennen, of Esbon, Kans. Colonel Brennen is one of the most popular of Kansas auctioneers, having officiated at most of the pure-

When writing advertisers please mention THE KANSAS FARMER.

bred hog sales of Northern Kansas for some years. Colonel Brennen is always able to get good prices, and his knowledge of pedigrees and his extensive acquaintance makes him an auctioneer who is always in demand. If you are needing an auctioneer for your coming sales it will pay you to write him for dates.

One of the valuable herds of Short-horn cattle, which has been established for a number of years in Kansas, is the Meadowbrook herd owned by F. C. Kingsley, Dover, Shawnee County, Kansas. The herd now numbers 65 head of uniform red Shorthorns. The herd is headed by one of the best sires ever used in the herd, the Scotch bull, Baron Goldsmith 224633. At the present time Mr. Kingsley has for sale nine choice red Shorthorn bulls, also a number of cows and heifers that will be sold at attractive figures to the intending purchaser.

John Black, of Barnard, Kans., has just purchased a new boar from Frank Michael, the popular breeder of Summerfield, Kans. He is an August pig sired by Champion Chief 32207, by King Do Do 29307 by Expansion. Unless this animal meets with bad luck he will make a great boar. Champion Chief, his sire, was one of the good ones at Lincoln last fall, and without being fitted for show purposes won sixth place. Of course, sixth place does not sound big, but at Lincoln you may be proud if you have an animal that the judge thinks enough of to give a place and premium.

Last week we visited the herd of Frank Mitchell, of Summerfield, Kans. Frank knows how to grow pigs, and when he gets fixed for it he is going to show others that he understands the business. He has some great sows in his herd; among them being May Expansion by Expansion, Black Bonnie 96853 by Champion Chief, Lady Blackfoot 76866 by B. B. Victor 2d, Henrietta 80501 by Expander by Expansion, and Bessie B. by Expansion 3d. Mr. Michael's spring pigs are sired by Ganet's Best by Proud Monarch by Chief Perfection 2d, Champion Chief, a grandson of Expansion, and Blain's Wonder 38717 by Johnson's Chief 35774, winner of sweepstakes at Nebraska State Fair in 1902 as a yearling. When you want a good pig it will pay you to write Mr. Michael.

Herewith is a picture of C. F. Hutchinson, of Belaire, Kans., one of the directors of the Standard Poland-China Record Association. Mr. Hutchinson has been raising pure-bred swine for more than thirty years. Some of the noted hogs he has raised are Bright Look, winner of sweepstakes and first at Nebraska State Fair 1900, Guy's Price 26037, winner of first and sweepstakes Nebraska and Kansas State Fair 1903, Hutch 82287, who won second under six months at Nebraska State Fair, and Teeumash White Face 89670, who won first and sweepstakes Kansas State Fair in 1903.

Folz & Son, of Marysville, are new members of the Duroc breeding fraternity. They purchased most of their stock from John Hunt, which is ample assurance of its good quality. They have one hundred and thirty fine pigs, and intend to hold a fall sale some time in October. When the Folz's go into anything they go in to stay and to win, and we predict that in a short time they will be in the front ranks as breeders of the Duros. When a man makes a success of one thing he is pretty apt to succeed when he starts a new venture. Mr. Folz has been one of the successful farmers of Northern Kansas for many years. He recently came to Marysville from Oketo, Kans., and has erected a large, modern house that is one of the prettiest residences in the city. Put Folz & Son on your list of coming breeders.

A. B. Garrison, the well-known breeder of Poland-Chinas of Belaire, Kans., has some fine spring pigs. While he is a little shy on numbers, he is making it up on quality, and will surely have some fine fellows for his fall sale. Mr. Garrison has as fine a lot of brood sows as we have seen this year. Among the good ones are Duke's Daughter 90779, Ringtail 78328, Miss Blain 67268, Flashy Lady 82100, Minnie Faultless 82103, Beautees Coe 2d 84449, and Lady You Tell 46 64954, who is the mother of one of his great herd-boars, Prince You Tell 32204 8. This boar deserves more than casual mention. He is one of the big fellows with splendid back, hams, and legs, and well-sprung ribs. Judging from some of the gilts we saw, that were sired by him, Prince You Tell's pigs will be in great demand this fall. Mr. Garrison's other herd-boar, Prince We Know 33598 8, winner of first prize at Lincoln in 1904, was out of condition last fall, and Mr. Garrison has only a few pigs in his spring litters that were sired by him.

The enormous loss of pigs during the

past spring emphasizes the fact that the breeders of pure-bred hogs must make provision for the better care of their sows during farrowing time. Many breeders report the loss of from 25 to 50 per cent of their spring crop and in many instances the death loss can be traced directly to lack of protection from the weather. One of the lucky breeders of the State is Mr. Ben Bell, of Belaire, Kans. While Mr. Bell is one of the men who has been breeding good hogs for many years, it is only recently that he has gone into the business on an extensive scale. In a conversation with Mr. Bell a few days ago he said: "When I decided a year ago to again go into the hog business I made up my mind to start right, and at once began the erection of a modern hog-house." With the determination to spare no expense he went to work and completed one of the most up-to-date houses in the State. It was erected at a cost of about a thousand dollars. The main building is thirty feet square and twenty feet high, this part being built for the purpose of a sale pavilion. In it the seats are arranged like the seating of a circus tent, and will accommodate 300 people. Buyers attending his sale will have no fear of the storms and cold, but will be as comfortable as though by their own fireside. From the main building three wings extend, one to the east, one west, and the other south. In these wings the sows are kept during farrowing time, and the comfort and advantage of this plan is proved by the small percentage of loss of small pigs. Mr. Bell has over 200 head from his spring litters, over 60 of them being early March pigs. They are large, growthy fellows, and should bring big prices in his fall sale. He says that the saving on the loss of spring pigs alone will almost pay for his hog-house. Mr. Bell will have some fine stuff to offer this fall through the columns of THE KANSAS FARMER.

Grain in Kansas City.

Receipts of wheat in Kansas City yesterday were 57 cars; Saturday's inspections were 27 cars. Early sales were at unchanged prices; later there was an advance of $\frac{1}{2}$ c to 1c. The sales were: No. 2 hard, 3 cars 84c, 1 car 83c, 2 cars 82 $\frac{1}{2}$ c, 6 cars 82c; No. 3 hard, 1 car 82c, 1 car 81 $\frac{1}{2}$ c, 5 cars 81c, 3 cars 80c, 3 cars 79c, 1 bulkhead car 78c; No. 4 hard, 1 car 78c, 4 cars 77c, 5 cars 76c, 2 cars 75c, 1 car 74c, 1 car 71c, 1 car 70 $\frac{1}{2}$ c; rejected hard, 1 car 76c, 1 car 69c, 1 car 68c, 1 car 66c, 1 car 62 $\frac{1}{2}$ c, 1 car 62c, 1 car live weevil 76c; No. 2 red, 1 car 93c; No. 3 red, 2 cars 92c; No. 4 red, 1 car 83c; rejected red, 1 car 76c, 1 car 75c; No. 2 mixed, 1 car 83c; No. 3 white spring, 1 car 82c.

Receipts of corn were 115 cars; Saturday's inspections were 61 cars. Offerings were heavy. Prices were unchanged to $\frac{1}{2}$ c lower, as follows: No. 2 white, 8 cars 48c; No. 3 white, 2 cars 48c, 3 cars 47 $\frac{1}{2}$ c; No. 2 mixed, 14 cars 47 $\frac{1}{2}$ c; No. 3 mixed, 17 cars 47 $\frac{1}{2}$ c; No. 4 mixed, 1 car 46 $\frac{1}{2}$ c, 1 car 46c, 1 car 45 $\frac{1}{2}$ c; No. 2 yellow, 1 car 48 $\frac{1}{2}$ c, 12 cars 48c; No. 3 yellow, 7 cars 47 $\frac{1}{2}$ c.

Receipts of oats were 11 cars; Saturday's inspections were 10 cars. Sales were made slowly at Saturday's prices, as follows: No. 2 white, 1 car 35 $\frac{1}{2}$ c, 4 cars 35c; No. 3 white, 3 cars 34 $\frac{1}{2}$ c, 4 cars 34 $\frac{1}{2}$ c, 1 car color 34 $\frac{1}{2}$ c, 1 car color 34 $\frac{1}{2}$ c; No. 2 mixed, nominally 33 $\frac{1}{2}$ c@34c; No. 3 mixed, nominally 33@33 $\frac{1}{2}$ c. Barley was quoted 40@43c; rye, 56@58c; Kafir-corn, 80@82c per cwt.; bran, 81@84c per cwt.; shorts, 85@88c per cwt.; corn-chop, 92@94c per cwt.

South St. Joseph Live-Stock Market.

South St. Joseph, Mo., May 21, 1906. The trade in cattle to-day showed very little change from the close of last week, although all other markets were reported lower on account of excessive supplies in Chicago. Local receipts were not large enough to supply the demand, consequently bidding was spirited and prices were well in line with last Friday. Included in the offerings to-day were good long-fed 1490-pound steers that sold at \$5.65, and there was quite a showing of good medium and plain heavy steers that sold at \$5.15@5.25, while some common to fair short-fed grassy offerings sold at \$4.75; spayed heifers light in weight and of good quality sold at \$4.80, and a pretty desirable kind of spayed heifers sold at \$4.25@4.50; these, together with good cows, sold fully steady, but commonish grasser cows and canners were weak to 10c lower on bulk. Bulls and veals are unchanged. The trade in stockers and feeders is practically at a standstill. There was no country demand and regular dealers insisted on a further decline of 15@25c, making a decline of 40@50c from the best time of last week. There was some demand for stock cows and helpers and stock bulls at unchanged prices.

Receipts of hogs at the five points to-day aggregated 75,500, a gain of 22,600 over the corresponding day last week; two-thirds of this number were centered in Chicago, where prices broke 10@15c, and this precipitated a sharp decline at all other markets. Demand here is sufficiently strong to keep values from breaking proportionately with Chicago, prices generally ruling 7 $\frac{1}{2}$ @10c lower than the general market of Saturday. Trading on this basis, however, was rather dull, and a few loads were unsold at the close. Quality offered was somewhat better than Saturday and weights were somewhat stronger. The supply consists largely of strong weight butcher lots, and good mixed packing grades. Prices ranged from \$6.20@6.35, with the bulk selling at \$6.25@6.30. Pigs were in poor supply and steady.

Offerings in the sheep division to-day were mostly lambs on which the market ruled 5@10c higher. Both wooled and shorn lambs made a new high notch for the season, the former selling up to 37.75 and the latter up to \$6.80. Demand is strong for sheep, and had there been any offered prices would have ruled somewhat higher.

WAPRICK

Kansas City Live-Stock Market.
Stock Yards, Kansas City, Mo.
May 21, 1906.

Receipts of cattle last week were moderate at 32,500, a decrease of 4,800 from the preceding week. The supply

was bunched on Tuesday, when receipts

FREE TRIAL MUELLER'S MOLASSES GRAINS

25-lb. pail.

MUELLER'S MOLASSES GRAINS is a feed for all live stock. Horses, cows, hogs, sheep, colts, pigs, and poultry thrive on it. It is made of barley-sprouts, brewer's grains and molasses, scientifically prepared and mixed—easily digested, free from drugs or medicine of any kind. It keeps live stock in a healthful, thrifty condition.

MUELLER'S MOLASSES GRAINS takes the place of corn, oats, and other mill-feeds at a saving in cost of full one-third. It is being fed more and more by the largest stock-raisers and horse-owners, and is giving universal satisfaction.

Molasses and sugar have always been recognized as containing properties of the greatest feeding value, but the problem has been, how to put them in such shape that they could be fed easily at a cost in keeping with other feeds. Mueller's Molasses Grains accomplish this, and is superior as feed to corn, oats, bran, and other mill-feeds, as it accomplishes better results at one-third less cost. It contains all the desirable properties of feed in just the right proportions to make a perfectly balanced ration when fed with hay, fodder, or other farm roughage. Molasses is one of the very few articles of food that is entirely assimilated by the digestive organs. It is all digested. It nourishes, strengthens, and fattens horses, milch cows, and other live stock, keeping them in the pink of condition, and free from disease.

It is not a medicine, but a natural vegetable food, palatable, nutritious, and economical. To prove that all claims made for Mueller's Molasses Grains are true, I will send one hundred pounds of it to any owner of live stock, that he may try it for himself. If it does not prove to be all that I claim and perfectly satisfactory, it need not be paid for.

Surely this is sufficiently liberal that I ought to hear from every live stock owner who reads this advertisement. May I send you a 25-pound pail on free trial? Fill out and mail coupon below.

Rev. ROBERT H. MIZE, Rector, Salina, Kansas

was bunched on Tuesday, when receipts were upwards of 14,000, causing a 10@15c decline on beef steers. This was fully regained before the week's close, with some additional advance on light and medium weight grades. Top steers ranged from \$5.15@5.75, against \$5@5.85 the preceding week. A good quality of 1,100 to 1,350-pound steers brought \$4.85@5.25. Yearling steers and helpers of good quality were active at the close of last week, and the opening of this. Mixed loads sold up to \$5.30, straight helpers to \$5, and choice heavy cows at \$4.25@4.75. The stocker and feeder market was dull, closing weak to 10c lower than the preceding week's close. Stock cows and helpers closed 10@15c under the high level of the week, and stock calves lost 25c, closing dull. Veals ruled steady, at \$4.50@6. Butcher bulls and best hogbacks were firm and active.

This week opens with a moderate run of cattle, 9,000 to-day, but the local market was handicapped by a heavy run, 31,000, at Chicago. Light and handy weight steers of good quality and finish sold fully steady with last week's close. Good heavy steers were slow and weak, plain heavy ones weak to 10c lower. Top \$5.60. Butcher stock was mostly steady, but heavy cows were slow and weak to lower. Common light stockers were draggy and weak, other stocker and feeder grades steady.

Hog receipts for the week were 64,500, an increase of 6,500 over preceding week. On Saturday top was \$6.45 and bulk \$6.30@6.40, against a top of \$6.42 $\frac{1}{2}$ and bulk of \$6.32 $\frac{1}{2}$ @6.37 $\frac{1}{2}$ the preceding Saturday. To-day's receipts were fairly liberal at 8,000, but market declined 7 $\frac{1}{2}$ @10c in sympathy with Chicago, where receipts were very heavy at 50,000 and the market was 10@15c off. Top to-day \$6.35, bulk \$6.25@6.32 $\frac{1}{2}$.

Sheep receipts to day were liberal at 5,000, but the market was firm and active, spring lambs bringing \$8, shorn Westerns \$6.65, woolled Westerns \$7.65. Receipts for the week show a slight gain at 28,300. Prices advanced 10@20c and all of the gain was held. Woolled lambs reached \$7.70, and shorn lambs \$6.65. Arizona grassers, first of the season, brought \$8@8.10, against \$6.25@6.26 a year ago. Texas grassers \$8.67 $\frac{1}{2}$ against \$8 a year ago.

Home Departments

CONDUCTED BY RUTH COWGILL.

A Parent's Funey.

Eight boys and girls I call my own,
And flaunt the fact with ringing tone.

With less than eight my joy were less;
But eight will do, I do confess.

Oft I am bold enough to state
I have but one, instead of eight—

One perfect child, so I maintain,
Instead of eight, with spot and stain.

I take the good in each dear soul,
And add all up to make one whole.

And that one, you may plainly see,
Is just as good as good can be.

Thus 'tis not eight I have, defiled,
But only one, a perfect child.

How now? Say not the bad, combined,
Makes, likewise, one of demon mind.

Such view, indeed is not from me;
Such view my fond heart can not see.

I know but this: My eight possess
A rounded orb of nobleness.

—J. E. Everett.

Children's Rights.

It is considered by some that the children of the present day have too many rights, and they long for the good old days of their grandsires. Perhaps some of the rights allowed them are not the ones best for them. The most important ones and the ones which are most often disregarded are those about which the child can have nothing to say and have no choice in the matter, and about which too many parents feel no responsibility. A child deserves, first of all, to be well born. One of the greatest blessings parents can bestow on their children is the right choice of their ancestors, as far back as grandparents at the least.

It is not necessary that the great grandparents were among those who came over in the Mayflower and settled in or near Boston, or that in their veins flows some of the old Virginia blood, but to be well born is to be placed in the world with a sound, healthy body and well-balanced and perfectly shaped brain; with no taints nor hereditary curse to follow them through life. Farmers and stockmen have learned to produce finer horses and cattle and even hogs by giving thought and practice to these things. Is a boy or a girl—a human soul—of less value than these?

It is not my intention to enter into a discussion as to which is the most important—to be well born or to be well trained—and if I should we would be no nearer a conclusion than before, for both are important. But I am satisfied that a child that is well born has a great deal better chance in life than the one who has in his body the ills of generations behind him, or their moral taint to battle with. He is handicapped to begin with. It is unkind of the father and mother to neglect the training of the children, and in after life when the truth of the matter dawns upon these same children they will blame and censure the for this neglect. Have you not seen the child who is left to his own self without restraint or discipline? How unhappy he is! He is discontented, hard to please, and selfish. And when he goes out into the world of temptations—where will be his strength to battle against them? He has never practiced self-denial. He has always had his own way and followed his inclination. Why not now? To discipline a child is not to break his will, and crush his self-respect. To do that is the other extreme to which some go, but it is not discipline. It is to teach him to be master of himself, to make him strong and self-reliant. Burbank has spent years of study and toil to produce the best results in plant-life. Why is so little attention given to the birth and training of our boys and girls?

Once upon a time a farmer had among his many swine a little pig that was puny and weak, and he thought it was not worth while to bother with it, and he gave it to John. John had never had any live thing of his own before, and was delighted to have it. He cared for it patiently and devotedly, and it lived and flourished and became in time a real hog—of the swine family—and John felt rich. But father sold the hogs and this one among them, and pocketed the money. Were they not all his—and John, too? Could he not do what he pleased with his own?

But John did not look upon it in

that light. The hog was his. Father said it was, and he felt that he had suffered an injustice in the transaction. He had laid great plans about what he should do with the money—perhaps invest in more of the same kind, his plans reaching far into the future. Can you wonder if a little later he leaves the farm and goes out into the wide world to see if it is any kinder?

Seasonable Recipes.

Strawberry Blanc Mange.—A few berries may be made to go much farther made into a blanc mange. Make the blanc mange in the usual way (there is always a recipe on the corn-starch box) and when ready to pour out stir into it a cup of strawberries cut into small pieces. Cut a few of the larger berries in halves and place three or four in the bottom of each cup before pouring in the starch to mold, so that they will be on the top when turned out. Nice served with strawberry sauce made by crushing strawberries and adding syrup of white sugar to thin and sweeten.

Strawberry Shortcake.—For five persons, wash one quart of strawberries, drain well, add one-half cup sugar and crush. For the crust, sift three teaspoons baking powder with one quart flour, rub in butter the size of a large egg, add sweet milk to make a soft dough. Bake in three layers, put the strawberries between the layers, saving a little to put on top, enough to moisten it; then cut large strawberries in halves lengthwise and cover the top with them. Nice either with plain cream or with whipped cream.

Escalloped Asparagus.—Boil asparagus until tender, then drain, and place a layer in a buttered baking dish which has been well sprinkled with bread-crums. Sprinkle the asparagus with chopped hard-boiled eggs, pepper, salt, and grated cheese, and proceed in this way until the pan is full, having the top layer of asparagus. Pour over it a cupful of thin white sauce, sprinkle with buttered crumbs, and brown delicately in a hot oven.

Asparagus with Eggs.—Boil asparagus until tender, then place in a buttered baking-dish; season delicately with salt, pepper, and a pinch of nutmeg. Beat the yolks of four eggs until light, add two tablespoonfuls of cream, two level teaspoonfuls of butter, a little more seasoning, and the whites of the eggs beaten to a froth. Pour over the asparagus, set in a hot oven, and bake until the eggs are set.

Asparagus and Green-Pea Croquettes.—Mash one cupful of cooked asparagus tips with one cupful of cooked green peas; season with salt and pepper, add one-half tablespoonful of melted butter and one beaten egg. Let get cold, mold into small croquettes, roll in breadcrumbs, then egg, and again in breadcrumbs. Fry in hot oil or fat, drain a moment on glazed paper, and serve at once.

Asparagus Salad.—Ice cooked asparagus tips and mix them lightly with finely-minced young onion. Serve ice-cold in little nests of tender lettuce leaves with a little French dressing poured over. A cream mayonnaise is also a delightful accompaniment, and especially if the iced asparagus tips are mixed with an equal amount of iced green peas.

Outdoor Life.

The magic breath of spring is in the air, even though it be a little chilly for the passing moment, and beauty is budding and blooming everywhere. The outdoor season is at hand. Good Health, an excellent publication, suggests that as soon as the weather will permit everybody should live on the porch, do their reading, sewing, eating, lounging, and napping there. There is nothing more healthful than living in the open air. Condensing Good Health's suggestions the Baltimore Sun says:

"The parlor ought to be deserted in summer for the open air, and the dining-room likewise. With hammocks and easy chairs a delightful existence there is practicable, and a stay there is much more health-giving than in the contaminated air of a bedroom. Many persons nowadays spend the night on the porch in summer, and not a few find the air better there in winter also. There are porches and porches. A bare, bleak porch exposed to the sun has its drawbacks, but it

can be made attractive by planting around it in the spring quick-growing vines. Clematis, woodbine, trumpet flower, ivy, and honeysuckle can be planted later for perennial shade. The morning-glory is a rapid grower and will give in a few weeks the desired privacy and shade. The scarlet creeping bean is said to grow six and three-quarter inches in one night. One of its merits is that it attracts hummingbirds all the summer long. Porch furniture is now made in many styles, including the indispensable table for books, magazines, etc. Hanging baskets with flowers and ferns have a decorative effect. Everything is to be added that will charm the household from the house into the open air."

Outdoor life, exercise, is better than medicine. It is good for the body, the mind, and the soul. The approach of the outdoor season should be also the cleaning season. The spade and the hoe, the broom and the paint brush should be brought into activity. Nature always does her part; let man do his. Clean yards and lawns, rear as well as front, clean streets and sidewalks, trees, grass, flowers, vines, these are necessary to cleanliness and beauty, such as give satisfaction to the eye and repose to the mind. There are many ways of living. Some do not live; they merely exist. Some persons of wealth only half live. To labor to live may be a necessity, but to live to labor is a duty. There is a wealth of beauty and loveliness that may be enjoyed by all. But there is no beauty without cleanliness, and outdoor life with dirty surroundings can not be attractive.—Nashville American.

Prevention of Moths in Furs and Woolens.

The moth insect begins to fly freely about the house as soon as warm weather begins, usually the latter part of March for Rochester, N. Y. After this date it is not safe to have furs or woolen clothing hanging about where the moths can get at them. The moth fly lays its eggs in the furs of woolen garments, which hatch into little maggots which feed upon the wool or fur, or the hide itself, thus ruining it in a short time.

Remedy: Take ordinary tarred paper fresh from the roll and cut it in such shape that it will cover the under part and the upper part of the garment when properly folded to go into a box. Place the fur or the woolen garment inside this fold of tarred paper, then place it in a tight paper box with a tight-fitting cover. Or, better, place it in a tightly sewed bag and tie the open end of the bag so tight that no insect can enter. If a tight paper box is used after the cover is put on, paper should be pasted over the crack or lamb in such a way as to make it impossible for the smallest insect to get into the box.

At the fur stores you can have your garments taken care of by paying from \$1 to \$5 each for the summer season, but this is expensive. At the fur stores they examine the garments each month, and if they see the slightest indication of moths working, they apply suitable remedies, whipping the garments lightly and exposing them to the sunshine for a brief time only.

Garments worn once in two to four weeks are seldom attacked by moths for some reason. If you have valuable furs to care for it is best to examine them at least once a month. Dyed furs, like sealskins, moths do not attack. Furs of natural colors, such as mink, the moths will attack freely.—Green's Fruit Grower.

Refined Pork.

Harold was playing "keep store" and had prevailed upon his grandmother to become one of his patrons. When she appeared in the role of customer he said:

"Have some nice vegetables or fruit or meat? Here is some extra nice boiled ham. Have some?"

"No, thank you," she said, "I don't like ham."

"Oh, but I think you'd like this, Ma'am. It is hardly a bit hammy."—Lippincott's.

Butter with a fishy taste has aroused complaint in Australia, where investigation has shown that the flavor has no connection with fish, but is due to one or more of four micro-organisms. The rusty iron of cans was found to have a bad effect on milk and cream.

One Fare for Round Trip

Plus \$1 from Chicago to Boston and return, via Nickel Plate Road, May 31 to June 9, inclusive. Also excursion rates via New York City. Extended return limit July 15. John Y. Calahan, General Agent, Room 298, 113 Adams St., Chicago. (3)

Death of Floral Lawn Cause, Smothered by Dandelions

The dandelion pest has had its day. For one dollar you can get an instrument that can be used by women and children as well as men that will pull dandelions and other noxious weeds at the rate of one thousand an hour, and leave not a drop of dirt nor a visible tear in the sod. No stooping nor bending and is a pleasure not a task to operate it; delivers automatically the weeds pulled, and your hands are not soiled, nor your back tired, no grunting or humping around to do your work. Pulls any dandelion or weed when tap root does not exceed 16 inches in length. Send one dollar and we will deliver free at your door.

KANSAS BUSINESS COLLEGE

YOUNG MEN AND YOUNG WOMEN Here is a school in its own home, costing \$40,000. Steam heat, electric lights thoroughly modern equipment. Our Employment Bureau places all competent graduates. We send stenographers, bookkeepers, and commercial teachers to all parts of the world. Business, Stenographic, preparatory, Civil Service and Special Pen Art Department. Tuition low, good board cheap, advantages unsurpassed. Special summer rates. Write Kansas Farmer for particulars. T. W. Roach, Supt., Box D, Salina, Kans.

If You Educate For Business

you will naturally select the best modern business training school to be found.

The Central Kansas Business College

Why? Because its graduates are successful. Teachers professional. Methods new. Equipment largest in the Middle West. Indorsed and recognized by all commercial schools in America. Employment department through which every competent bookkeeper and stenographer from our school is secured a position. The mecca for fine penmanship and training of commercial teachers. Location of school and city most excellent. Tuition moderate. Board and room cheaper and better than elsewhere. No vacations, school in session every day in the year. Moral tone of the college unequalled anywhere. For further particulars address,

H. A. Andreson, M. A.
Abilene, - - - Kansas

The Kansas State Agricultural College

OFFERS courses in Agriculture, Domestic Science, General Science, Mechanical Engineering, Electrical Engineering, Architecture, and Veterinary Science. Also short courses in Agriculture, Dairying, and Domestic Science. Admission direct from the country schools. A preparatory department is maintained for persons over eighteen. Necessary expenses low. Catalogue free. Address

BOX 50. MANHATTAN, KANSAS

The Young Folks

As You Go Through Life.
Don't look for flaws as you go through life.
And even when you find them,
It is wise and kind to be somewhat blind.
And look for the virtue behind them,
For the cloudiest night has a hint of light.
Somewhere in its shadows hiding:
It's better by far to hunt for a star
Than the spot on the sun abiding.
The current of life runs ever away
To the bosom of God's great ocean—
Don't set your force 'gainst the river's course.
And think to alter its motion,
Don't waste a curse on the universe,
Remember, it lived before you;
Don't butt at a storm with your puny form,
But bend and let it go o'er you.

The world will never adjust itself
To suit your whims to the letter;
Some things must go wrong your
whole life long.
And the sooner you know it the
better.
It is folly to fight with the Infinite,
And go under at last in the wrestle;
The wiser man shapes into God's plan
As water shapes into a vessel.
—Ella Wheeler Wilcox.

Fleetfoot; the Autobiography of a Pony.

MARION SEWELL.

CHAPTER XII.—THE NAME WAS MAUD.
I made no mistake when I prophesied for myself a sleepless night in Mr. Floyd's stable. While I was still nibbling at the hay piled high in my manger, flashes of light repeatedly quivered before my eyes, and about the same time loud, rumbling sounds which I recognized as thunder caused me to prance around nervously, but the disturbed condition of the elements affected the yellow mule a great deal more than it did me, for he seemed to have lost all control of himself. The present excitement, added to his fiendish temper, served to make him anything but a comfortable companion. Every time the lightning flashed he would rear up on the manger and snort viciously, and the thunder which followed gave him an excuse to kick either the partition which separated us, or the wall behind him.

After about four hours of this strenuous performance, a heavy board was hurled across the stable, striking me with some violence on the knee. The next time my stall was lit up I observed that the dividing wall was completely shattered, and the fact that there was now no barrier between us worked his muleship into an added fury.

Presently the rain commenced coming down in torrents, and aside from the endless pouring sound upon the roof, all signs of storm disappeared. In the beginning of the blessed peace, the yellow mule suddenly became calm. Whether he had exhausted himself to the point of sleep or whether he dropped in a fit of apoplexy, I neither know nor care; all I am sure of is that he was quiet at last.

The next morning when I awoke in the light of a calm and beautiful day it seemed as if some tragic wreck had taken place in the night, for splintered boards were scattered everywhere, and a window, jarred from its casings, filled my stall with fragments of broken glass. In the midst of the debris the yellow mule lay with neck outstretched, sleeping the sleep of the unjust.

Later on, when Marcella was leading me into the barnyard, I could not resist a final glance at the mischief-maker. He hadn't as yet stirred and I could not see that he breathed. A wicked sense of elation for a moment took possession of me, but I banished it at once, for I am a good pony and not in the habit of wishing any one evil. However, I did not think it possible for this mule to be alive and at the same time so peaceable. I was debating this question in my mind when Daisy, who was holding a gate open, grew impatient. "Oh, come on!" she called to Marcella. "My feet are freezing in this old mud. Pony takes such an interest in Maud that we will have to hitch them up together one of these days."

I passed quietly through the gate, but at the same time I had positively decided that if the day ever came when I should be "hitched" with this new acquaintance, there would be some kicking done, and Maud wouldn't do it all, either.

CHAPTER XIII.—TURBULENT WATERS.

In spite of the kind treatment I had received at Daisy's house I was overjoyed to turn my head in the direction of home. The thought of Big Jake

with his fund of good humor and hard sense filled me with pleasure, and I wondered, if he had been in my place the night before, if Maud would not have learned a valuable lesson in self-control.

But now that my unhappy experience was over I was willing to forget it as far as possible, and waited restlessly for Marcella to saddle me and mount. Daisy, not liking to part with us, kindly offered to accompany Marcella home, and in consequence seated herself cozily behind.

With a light heart and feet that were by no means heavy, I started off. The roads were beaten firm by the recent rain, and here and there large pools had formed through which I trotted gaily, spattering mud in all directions, much to the merriment of my little friends.

The houses which we passed looked as if they had been newly painted, and the fields of grass, that yesterday presented a dried and dead appearance, were now all shining in their dresses of soft green. At times racing along smooth turf, and again stopping a moment on the top of some convenient hill to admire the glowing scenery, we in good season came to where the creek, which was almost a river, crossed the highway underneath a broad, wooden bridge. Just now this structure was not in sight, for the creek, influenced by the heavy downpour, had left its banks and rushed in a wide and roaring current over the bridge and created a sea of water on both sides. The scene, which I considered one of grandeur, impressed more than frightened me, and it took very little urging to bring me to the very side of the overflowed district.

Marcella and Daisy, both being of a mermaid tendency, were greatly pleased with what they saw, and clapped their hands and shouted at the various things that floated by. Several short, round logs sailed past in majestic rotation, and the little girls called them vessels on the Atlantic Ocean, and tried to give them names; sometimes they had to hurry with the christening process, for the so-called ships were going very fast. Once a live pig bobbed squealingly along, an occurrence which called forth exclamations of pity, and I am sure a rescue would have been attempted by my young riders had not the pig been hurried out of sight. Then came a small flock of geese, and as they did not seem to be in any particular distress, the girls laughed and called a loud "quack, quack," whereupon one impudent old fellow flapped his wings and screamed "quack, quack." After that there were more logs and rails and a little house that was built for sheep. As it was getting near noon, Marcella suddenly remembered that her mama desired us home before dinner time, and wondered what we had better do.

"Why, go on, of course," advised Daisy, unconcernedly. "How else do you propose to get there?"

"But," remonstrated Marcella, "we might get drowned."

This cowardly suggestion caused Daisy to fall into convulsions of laughter. "Why, Marcella," she gasped, "ain't you afraid you'll get drowned in your teacup?"

"I don't know as there is anything so funny about it," returned Marcella, in an injured tone. "The water's roaring horrible, and we can't see the bridge at all."

"Course we can't see the bridge, because there's a few inches of rain over it, but if you'll change with me and let me have the reins I can make a pretty good guess where the bridge is."

Reluctantly Marcella consented, and Daisy, seated in the saddle, gave the sharp command, "Go on now, Pony."

With some misgivings I obeyed, slowly at first, but finding that the water reached only to my knees, began to make more haste. Like Daisy I could form a pretty good guess where the bridge was, and after some little maneuvering I placed my feet on the hard boards. Here, too, the water was not very deep and I gained confidence every moment. But alas! the time of my triumph was but short, for when I had proceeded only a few paces, the bridge began to rock and sway, and instantly, with the horrified screams of the little girls ringing in my ears, we sank down into the raging waters and were all covered up with foam.

Blinded and choking, I plunged wildly until my feet struck something hard, which I naturally supposed might be the missing half of the bridge. This was surely what it was, and by climbing upon it entirely, I was sufficiently elevated to keep my head above water. Standing there, trying to recall my breath, which the shock had momentarily swept from me, I was relieved to hear Daisy say, "You cling to me,

LOWELL INGRAIN CARPETS

"The all wool kind"

We have been telling you for weeks WHY you ought to insist upon getting a LOWELL INGRAIN the all wool kind—when you buy a carpet. Thousands have taken our advice and are highly pleased.

ISN'T IT TIME FOR YOU TO CONSIDER BUYING

Remember these points: Cover the whole floor—it's warmer, and easier to take care of; can be used on both sides, a great saving. LOWELL INGRAINS are made that way; can be had in newest styles and colors, just like high grade carpets. If it is wound on a hollow stick, it's a genuine LOWELL INGRAIN.

When you buy carpets, ask the local dealer for LOWELL INGRAINS. Look for the hollow stick and run no risk. Don't accept any other.

Marella, and I'll hold to the saddle," and brave Marella answered, "Yes, if we can hold tight I know Pony will save us."

Encouraged by my little mistress' faith in me, I started to swim down the stream, dodging with much difficulty the many things which were beginning to collect along the creek's side. Keeping in mind the precious burdens depending on me, I put forth my best efforts, taking long and careful strides in the direction of safety, and before I realized the possibility of such a happening I was standing on dry land.

"Oh, Pony! Pony!" spluttered Marella, and between hysterical laughing and crying both girls slipped off my back down on the ground.

Just then Mr. Dearrot drove up, the horses steaming and panting, his appearance frightening me a great deal more than did my experience in the water.

"Oh, children! what have you done?" he asked brokenly, as he gathered up both excited culprits, and wrapping them snugly in a warm blanket he turned his horses' heads and drove rapidly home, leaving me in deep meditation on the side of the bank. I was a little lonely as I made my way later on to the barn, but my slight heartache was forgotten when I went into Big Jake's stall and received his warm greeting.

The next day I was made happy again, for Marella and Daisy were both on hand, neither being any the worse for their recent adventure.

(To be continued.)

The Little Ones

The World.

The world is such a pleasant place
For any child to be,
With pleasant things to sing about
And pleasant things to see,
And other little children near
And pleasant roads to go,
And many things a-happening
Which only children know.

The world is full of apple-trees
And stony walls to climb,
And buttercups and meadow-sweet
And all the summer time,
And singing brooks where cowslips
grow.
And children wade and fish,
And blackberries as large and sweet
As any child may wish.

The world is full of giants bold
And princesses and elves,
When little children sit alone
And whisper to themselves.
The world is full of blocks and dolls
And toys a rainy day,
And little children everywhere
Who always want to play.

The world is full of lullabies
And loves for little heads;
And mother-dears to sit beside
The sleepy trundle beds,
And pretty dreams to run among
As far as you can see—
The world is such a happy place
For any child to be.

—Carolyn S. Bailey.

An Indian Legend—the Fox and the Rabbit.

There was a village, and in the village dwelt a pretty girl. All the young men were courting her, but none had been able to marry her. Even the animals were in love with her. So one day a fox thought he would go and visit the girl. So he started, and on the way he met a jack-rabbit. The fox asked the rabbit where he was going, and the rabbit said: "I am going to see the pretty girl in the village." "Well," said the fox. "I am going there, too, so we might as well go together." "Very well," said the rabbit. So they went on together.

When they came to the lodge, the rabbit was the spokesman. They were invited into the lodge. The rabbit did all the talking to the girl. The rabbit whispered to the girl and said: "Do you see yonder fox? I rode him when I came to see you." So the rabbit soon left and went to his home.

The fox then went up to the girl, and said: "What did the rabbit have to say?" The girl said: "The rabbit said he sides you whenever he comes to see me." The fox was mad when he heard what the rabbit had said.

So the fox went to the home of the rabbit and when the rabbit saw him coming he knew that the girl had told him what he had said and also knew that the fox was mad. So the rabbit lay down and began to groan, as if he were in great pain. When the fox got there he said: "What have you been saying to the girl? You never rode me, and I want you to go with me and tell and I want you to go with me and tell the girl that you told a lie; that you do not ride me." "But," said the rabbit, "I can not go for I am sick. I can

not walk." But the fox wanted the rabbit to go. So the rabbit said, "Let me ride you, and when we get to the girl's lodge then I can get off." So the fox let the rabbit ride him. The rabbit kept on falling off, so he asked the fox if he could put a rope around him, and the fox said: "All right." So the rabbit went for a rope and got his quirt also. The rabbit rode the fox until he got to the entrance, then the rabbit jumped off and handed the rope to one of the servants.

The girl saw the rabbit, and received him. She took him in. She talked to the rabbit a long time, then said: "Mr. Rabbit, I refuse to marry you, for you have such a big nose." The rabbit went out and never returned.

The fox then tried to marry the girl, and she refused him, for the rabbit rode him. Then the fox left and went into the timber. The fox felt so badly that he kept on running, and ever after that was afraid of people.—Indian School Journal.

RENT PAYS FOR LAND

FERTILE SECTIONS OF THE SOUTHWEST, WHERE
LAND SELLS FOR \$15 AND RENTS
FOR \$5 PER ACRE

One of the remarkable things about Eastern Arkansas and Northern Louisiana is the fact that cleared land rents for \$5 per acre cash, and can be bought for \$7.50 to \$15 per acre. It costs from \$6 to \$10 an acre to clear it. Other improvements necessary are slight and inexpensive.

The soil is rich alluvial, or made. It produces a bale of cotton per acre, worth \$45 to \$60. This accounts for its high rental value. Other crops, such as corn, small grains, grasses, vegetables and fruits thrive as well.

Alfalfa yields 4 to 6 cuttings, a ton to a cutting, and brings \$10 to \$16 per ton.

In other sections of these States, and in Texas as well, the rolling or hill-land is especially adapted to stock-raising and fruit-growing. Land is very cheap, \$5 to \$10 per acre; improved farms \$10, \$15, to \$25 per acre.

The new White River country offers many opportunities for settlers. High, rolling, fine water—it is naturally adapted to stock- and fruit-raising. Can be bought as low as \$3 per acre.

See this great country for yourself and pick out a location. Descriptive literature, with maps, free on request.

The Missouri Pacific-Iron Mountain System Lines sell reduced rate round-trip tickets on first and third Tuesdays of each month to points in the West and Southwest, good returning 21 days, with stop-overs. For descriptive literature, maps, time tables, etc., write to

The Movement in Kansas for Better Roads.

PROF. W. C. HOAD, KANSAS STATE UNIVERSITY.

(Continued from last week.)

IMPROVEMENTS ON THE PRESENT SYSTEM.

In the past in a majority of the counties both the property tax and the poll tax have been allowed to be "worked out" on the road. The writer believes, in the first place, that all road taxes, including the poll tax, should be paid in money. When such taxes are worked out, it is well known that between the lack of skill in the workers, the inability of teams to work well together, the doing of practically all road-work in the late summer or fall, when people are less busy with farm work, instead of when the roads need the attention, practically half the tax is wasted. This is so thoroughly recognized that it scarcely seems worth while to mention the various advantages of a tax paid in money, the same as other taxes, but one point in favor of the plan is sometimes overlooked, and may properly be spoken of. Every one who has had to work the soil in any way, whether it be to farm a crop or to dig a ditch or to work a road, knows that more important than machinery or methods is the matter of taking advantage of favorable soil-conditions, and of working with nature instead of against her. The road-overseer finds that with the cash in his hand he can get the road-work done not only in the right way, but also at the right time, which is of even greater importance. Almost any trustee or road-overseer will tell you that he could get better results with from one-half to two-thirds the amount of the tax if it were paid in cash instead of in work; and this is just as true of the poll tax as of the property tax.

In the second place, the writer feels sure that the prevalent methods of road-work are by no means the best possible. Too much reliance has been placed upon the plow and scraper and grading-machine, and too little attention paid to matters of drainage and continuous repairs. It is now pretty generally recognized that the method of road-maintenance usually practiced—that of a general tear-up in the late summer or fall—is based upon an entire misconception of the scientific principles involved in the problem of adapting a soft material like earth to the purpose of a road-surface.

The county, and not the township, should be the unit of road-administration. The township is too small to be the most efficient unit, for the main roads usually traverse two or more townships whose interests or inclinations in the matter of improvement may be very divergent; or the people of one township may largely use a thoroughfare to town lying almost wholly in another township. With the county as a unit, systematic methods of improvement and maintenance can be more easily applied, and standards for road cross-sections, ditches, culverts, and subdrainage can be adopted and maintained. Moreover, and perhaps more important than these, if the county is the unit it will be possible to place all road- and bridge-work under a county engineer. Ordinary road-work, as now, could be under the direct charge of the township trustee, who would be assisted by the proper number of road-overseers. All culvert- and bridge-work, however, and all special road-work should be under the county engineer, who should make surveys, draw up designs, prepare plans and specifications, inspect work, and make reports to the county commissioners. This would relieve the township trustees of a large part of the work connected with bridges and drainage, while it would place these larger matters of special road-work requiring technical knowledge under the charge of an expert. This county engineer should be a practical man, well informed and experienced in all matters relating to drainage, rocks and soils, grades, concrete, and all forms of construction work. He should give his whole time to this work, and could earn his salary two or three times over.

The writer does not believe it to be practicable or advisable that the State should be looked to for any direct financial aid in the building of hard roads. The conditions in Kansas are very different from those in the closely built-up Eastern States, where State aid to road-building is deservedly so popular a movement. He does believe, how-

ever, that there should be a permanent State Highway Commission, whose duty it would be to study the road conditions of the State, to collect and disseminate information concerning the plans and systems of highway improvement and maintenance best suited to the needs of the different sections of the State, and to the different classes of roads; to study and test the various stones, gravels, and other materials available for road-making, and to make the information available to any county officials or others undertaking road-improvement.

Now let us see how this would work out in a concrete case, that of our typical county. The county has, as before stated, a population of 21,400; the population of the county seat is about 5,000. Besides this there are about a half dozen small towns with populations of from 300 to 1,000. The area of the county is 708 square miles, and its taxable valuation is something over five million dollars.

The county has 1,416 miles of roads, or two miles of road per square mile of area. Of these 1,416 miles, about twenty per cent, or 282 miles, are what may be called main-traveled roads. These are the thoroughfares of the county—the main roads leading from the well-built-up communities inward to the county seat or other town, the direct interurban roads, and usually a main road along each important stream-valley. Along this twenty per cent of the road mileage, and within a mile of the thoroughfare, will live probably fifty per cent of the total rural population. More than this, these main roads will carry probably seventy-five per cent of the rural traffic of the county. The writer believes that the system of road-administration of the county should be broad enough and far-sighted enough to look forward to the building of permanent roadways, along at least half of these thoroughfares. By permanent roadways the writer means in general broken stone or gravel roads. Of course, this can not and should not all be done at once, but a start should be made as soon as the conditions warrant it, and an increasing amount should be completed in each succeeding year.

In view of our present makeshift methods and our customary attitude toward the whole road question, this seems a rather large thing to undertake. And yet it is a perfectly practicable and a very reasonable thing to do. The valuation of our typical county is about five million dollars. Suppose a three-mill levy were regularly imposed for permanent work on these thoroughfares. The \$15,000 a year resulting from this tax would be sufficient for the construction of five miles of broken stone road, or, if the real estate on each side and within a half mile of the thoroughfare were to bear, say, five per cent of the cost of the improvement, the \$15,000 would provide for about six miles of permanent road each year. If good gravel could be obtained, the length of road built with the same funds could probably be increased to eight or ten miles. These estimates assume that the broken stone or gravel would be hauled an average distance of not over three miles, and that an excessive amount of grading would not have to be done.

The writer speaks of a general tax levy of three mills over the entire county only by way of illustration. In his judgment in planning for hard roads, it would usually be better to have it arranged so that for any particular road-improvement, such as the macadamizing of three or four miles of thoroughfare, a special road-district would be formed in very much the same way as in the case of a drainage-district. The whole improvement would then be placed in the hands of a district commission, who would attend to the building of the road, and assess the cost in proportion to the benefits received from the improvement.

THE ADVANTAGE OF EARTH ROADS.

What has been said concerning hard roads relates only to the thoroughfares of the county, constituting only perhaps twenty per cent of the entire mileage. Some over-enthusiastic good roads advocates have assumed that all, or practically all, roads should ultimately be macadamized, and have pictured a golden age of life on earth when that time should come. The writer maintains, however, that for this remaining eighty per cent or more of the total road-mileage, the dirt road is the proper and the best form. He believes thoroughly in the usefulness and efficiency of the plain dirt road, and he resents the suggestion, sometimes made, that it is only a makeshift

WALNUT GROVE FARM ...FOR SALE...

Upon the advice of several specialists I am going to New Mexico for my health. On this account I must dispose of all my Kansas property, including the famous Walnut Grove farm, the most complete and profitable stock farm in Kansas. This includes 130 acres of the best land in Kansas, two miles from Emporia. Over 200 good O. I. C. hogs. All our Barred Plymouth Rocks, 36 Collies, 44 head of cows, 8 head of horses, the best farm house in the State. Also one small farm house, 2 large barns, 2 large cattle sheds, one 300-foot hen house, one 250-foot broiler house, 20 brooder houses, capacity of plant, 4000. The best hog house in the West, double-deck cement floors; many small hog houses. This is not an experiment, but a successful stock farm. Price, \$20,000 cash.

H. D. NUTTING, Emporia, Kans.

When writing our advertisers please mention Kansas Farmer

DIVIDEND

Dividends will commence in less than six weeks on the stock of the Uncle Sam Oil Company of Kansas. There is only about one-tenth of this valuable stock left unsold and that is being taken every hour. Money received on stock and from sales of refined oil for week ending May 6 totaled \$15,600.00, while for week ending May 12, with one good mail to hear from, was over \$17,000.00. Over one-quarter of million dollars have been subscribed for this stock at the same price asked herein of you.

Thousands are figuring on purchasing part of this stock, and record-breaking remittances are certain to follow during the next few weeks. Better send your order in early and secure some of this dividend stock before it is all sold or doubled in value.

Dividend Will Be Paid June 20, 1906.

There are few weeks left yet that you can secure stock in the Uncle Sam Oil Company, and participate in the first dividend to be paid by the company. If the stock is not all sold by June 20, it is safe to figure that it will be much higher or quickly picked up after the first dividend is paid. There are now nearly eight thousand stockholders, and they are continually increasing their holdings and inducing their friends to buy. The days are limited that you or any one will be able to secure Uncle Sam stock. Better send in your remittance while the price is right.

Why Uncle Sam Offers You a Good Deal.

It is the common talk among business men that this stock could be sold for more money. However, this company has a great work to complete and by selling the balance of the stock at even the 20 cents per share will be able to place itself where it can build, too, as large as it desires. For the past five months the stock has been selling at 20 cents per share until now close to one-quarter of a million dollars has been subscribed at that price. This money has all gone into the enterprise, and every one knows that under these conditions the stock is a good buy even at 35 cents per share. However, the company figures that by rushing the work to completion it can soon make back all that it loses on the low price of stock. Consider what the company has accomplished in the past five months and you will have to admit that you are offered a rare opportunity of investment herein. One that is commanding respect and consideration from investors from all over the United States, and one that you will have to avail yourself of at once or it will be all sold.

Remittances Are Strong.

Up to date there has been paid into this company over $\frac{1}{2}$ million dollars. Men are buying stock to-day that purchased stock on the start. Over one thousand inquiries have been received for this stock during the last few days. There

are thousands of the stockholders who will buy stock during the next ten days. There will be others who will wait too long and be too late. Remittances for the past two weeks total over thirty-two thousand dollars (\$32,000). Next week they will not run under twenty thousand and may go a half higher. The faster the remittances are received that much faster the work will be crowded. We solicit you to join our hand and help push the good work on to success.

Big River Refinery Nearly Completed.

On the banks of navigation, where it will be free from any criminal combines of the railroads and the oil trust, Uncle Sam Refinery No. 3, at Atchison, is nearing completion. The material is all on the ground, and it is just a question of days until this plant will be ready for business. Don't wait until this great revenue getter is fully completed, and then expect stock at even 50 cents per share.

First Pipe Line Pumping Station Nearly Completed.

During the last week two more of the mammoth pipe line pumps have arrived. Uncle Sam will have five large pumping stations and 135 miles of main trunk pipe line completed during the next sixty days. The first pumping plant to be built was completed this week just north of Uncle Sam Refinery No. 1 at Cherryvale. The men are now at work on another pumping station near Tyro, Kans., and will go from there to Bartlesville some time next week.

More Pipe Line Arriving Daily.

Two more car loads of pipe line were unloaded yesterday and eight miles more are on the road. Fifty miles more will be shipped during the next four weeks. It takes lots of money to complete refineries and build miles of pipe line, but when they are once completed they are the biggest money makers on earth. The quicker we can place the balance of this stock the quicker we can unload pipe line, and the company will make a special effort to raise sixty

thousand dollars for the pipe line department alone during the next fifteen days, after which this stock may be advanced to a half dollar per share.

Strikes Another Great Oilier.

As was to be expected, Uncle Sam drillers completed another fortune-maker in Eleven Hundred Acre Lot 43, Osage. At this writing the drills are lined up double-breast, following close on the trail of what oil men believe will develop the greatest oil pool of the Osage country. One of the drills is now within 48 hours' run of the pay dirt. It is going deeper every hour and is operating day and night. The oil sand has been increasing for several locations towards where the drills are now going down. Big gushers have been found in the past, and Uncle Sam may have one before another quotation is made on this stock. If you delay until a three thousand (3,000) barrel well puts this stock out of your reach it will be your fault. While you hesitate the drill may penetrate the oil pool. Uncle Sam already has a settled production in this one property of nearly five hundred (500) barrels per day. This oil, when manufactured into the different by-products will bring nearly \$5 per barrel. There is merit back of this stock on every hand, and you will make no mistake if you invest a few hundred or a thousand dollars now while the stock is certain to grow into great value.

Sixty Thousand Oil Burners Will Be Installed in Kansas by Early Fall.

For the past six months Uncle Sam men have been working on an oil burner for cook stove and heater. One that is a success has now been completed. An order has already been placed for 15,000 of these burners, and at least 60,000 of them will be installed in that many Kansas homes by early fall. This burner feeds the oil so as to generate a gas and burns the gas so that 100 gallons of oil is equal to one ton of the best coal. It looks very much like this burner would revolutionize the fuel business in Kansas and adjoining States and will open up in

time a market for domestic p. It makes Kan too valuable t force the large ing coal and w ers who are str labor. At the of the oppress larger market from all the United States.

Uncle Sam, v ing stations al cisterns at onc rounding territ rises ahead fo on this burner years has offer fuel burner—nation to give best fuel, but h ered the same, this great Uncle into existence d ucing compa being blacklist secured contr olance Uncle Sa than the most Should Build U D

It takes time thoroughly on Sam time and y refining capaci sand barrels day has reached its There is an op Sam is going to easily made in mestic fuel bus will be handled fineries. Uncle hour, and the s company advan

that must be put up with. When in good condition an earth road is a fine road—smooth, noiseless, affording good foothold to horses, but yet not too unyielding, pleasant to the eye, and comfortable to drive over. The great problem of the dirt road is that of maintaining it in this good condition, and this is largely a problem of surface and subsurface drainage. If this good earth road were to be protected from the water above and below, it would remain in good condition until it fairly wore out, like a well-built broken stone road.

It was stated at the outset that the soil in our typical county of Eastern Kansas was good for agriculture, but too clayey and too retentive of moisture to make the best natural roads. Roads in this kind of soil always need subdrainage, and by subdrainage is meant some condition either naturally or artificially created that will act promptly and certainly to lower the plane of saturation of the soil to a depth of several feet below the surface of the road. This requirement is often supplied by natural conditions, as a gravelly or sandy stratum underlying the road, or a deep, porous subsoil, or a deep ditch alongside the road. But sometimes the natural subdrainage is inadequate or entirely lacking, and the requirement must be met by artificial means. Right here is one of the weak points in the present system of road-improvement, for artificial subdrainage is seldom thought of and more seldom still employed. For the ordinary case of boggy road a single longitudinal line of four-inch or five-inch farm drain-tile laid from two to four feet under one of the side ditches, with a slight fall and free outlet, is a sure and permanent cure. Surface drainage should be provided, first, by side ditches of proper shape, size, and fall, and properly kept clean; and second, by a smooth and hard crown to be given and maintained on the road-surface. This crown should be about ten or twelve inches in height for an ordinary clay loam road, less for sandy soils, and more for gumbo; somewhat less perhaps on level roads, but more on hill slopes here.

THE USE OF THE SPLIT-LOG DRAG.

One of the features of the scheme of road-administration, which the writer

is advocating, in a system of thorough and scientific maintenance for the earth roads. The tool strongly recommended for this is the road drag, variously referred to as the King drag, the split-log drag, the Missouri drag, and the Western road drag. This tool is too well known to require a description here, but it may be stated that while it is doubtless true that there is no better form of drag than that made from a split log, in the manner advocated by Mr. King, it is also true that good drags can be made of plank. In either case a light drag is preferable to a heavy one, and the forward end of the front slab should be shod with a flat piece of steel about four feet long to serve as a cutting edge.

After a rain the first teams on a road cut up the surface more or less, and ruts tend to be formed. Now if at about this time, after the surface has dried somewhat but while it is still moist and crumbly, a drag is run over the surface, down on one side of the center and up on the other, the edges of the planks will plane off the projections and fill up the hollows. In addition, the diagonal position of the planks will force a little dirt toward the center of the road, where it will help fill up the ruts and holes and restore the impaired crown. Moreover, this smoothing action, followed by the wheels of the vehicles which now ride on the surface instead of following the ruts and cutting them deeper, on a clay or gumbo road produces in time a sort of puddled surface that is nearly impervious to water. The road then absorbs much less water and dries off much more quickly than an undragged road, is always smooth, except for the slight cutting up of the surface immediately after a rain, has the traffic somewhat uniformly distributed over its surface, always has the proper crown and a good surface to shed the next rain, and eventually develops a degree of hardness that is almost beyond belief. It is in first-class condition for probably more than ten months in the year, and in fair condition for the most of the remaining two months.

These results are certainly worth paying something for, but as a matter of fact the cost of maintaining a road with the drag is very small. The estimates usually made are from three dollars to six dollars per mile per year;

This would not be in addition to the work at present done, but would take the place of a very large part of it, so that the entire cost of maintaining the dirt roads would be decreased. The writer believes that he is conservative in estimating that by the proper and systematic use of the drag wherever possible, at least one-half of the fifteen dollars per mile per year spent for roads under the present system would be saved. For the entire county this would mean a saving of over ten thousand dollars a year, which sum could be used for such work as subdrainage, the grading down of bad hills, or other permanent improvements.

OTHER IMPROVEMENTS.

There are several other definite lines along which important improvements might well be made. One of the most notable of these relates to the use of some permanent form of culvert for the smaller waterways, instead of the common form of wood stringers with their ends resting on dry stone walls, and the whole covered with plank. Eastern Kansas is abundantly supplied with good stone, and there are several plants in the State that are manufacturing high-grade Portland cement. For most localities, good rubble masonry laid up in Portland-cement mortar will not cost over 15 cents a cubic foot, and Portland-cement concrete not over 20 cents a cubic foot. These figures are based, in the case of the stone masonry, on good, substantial random rubble work, with a mortar composed of one part cement and three parts sand; and in that of the concrete, on a mixture of one part cement, three parts sand, and six parts broken stone. An arch properly built of either of these materials is practically a permanent structure, and it may usually be shown in comparing it with the wooden culverts with dry-laid side walls that the larger first cost of the concrete or masonry arch is much more than counterbalanced by the very great saving in repairs and renewals.

Other desirable improvements, such as the subdrainage of wet places, the better looking after of highway fences, the mowing of all roadsides, the—may the writer dare suggest it?—setting out of shade-trees along the highway in places where their presence would add to the beauty or utility of the highway and would not be a source of in-

jury to adjoining property, all these and other things might be done in time if road-administration were placed on a little broader and more permanent basis.

It has been the writer's observation and experience that we have not been thinking of our roads in the right way, nor allowing to them the importance they deserve. If we took them a little more seriously, as we do our schools, we would search out the weak places and the wasteful places and the inefficient places in our present system of road-management, and remedy them. The writer is strongly of the belief that by the application of good business methods and strict scientific principles to the road question, all the improvements suggested in this paper excepting that of macadam or gravel surfacing could eventually be had at a cost not exceeding what is being spent now for the bare maintenance work.

THE PARCELS POST—CAN WE HAVE IT?

EDWIN TAYLOR, EDWARDSVILLE, KANS., BEFORE THE MISSOURI VALLEY HORTICULTURAL SOCIETY.

The answer to the above question is: Most anything can be had when people have the price and are willing to put it up.

The manner in which we are divided upon this and kindred subjects—divided according to our interests, our associations, and our predilections—is shown by a little occurrence that happened the past winter "over there in Kansas."

The Kansas Agricultural College held last year its most successful series of farmers' institutes. The especial reason of their success lay in the fact that last year, for the first time, the college employed an advance agent, director, manager, press-agent, and chaperon. For this responsible and various position, the college had the good fortune to secure the services of J. H. Miller.

Well, in all the meetings held under Mr. Miller's management, it was the published policy to eschew subjects of a controversial or political nature. But it wasn't always the case that Mr. Miller could keep the cavorting Kansans off the forbidden "grass."

For instance, at a certain town which may be called Blankville, the institute was numerously attended, with marked interest in the discourses and

Successful Oil Burner for Cook Stoves and Heaters Secured by Uncle Sam---Will revolutionize the Fuel Business of the Missouri Valley and Sound the Death Knell of the Oppressive Oil Trust

capacity of this growing enterprise will have been in great river refinery, Uncle Sam No. 2, by Atchison, Indian Territory; and sixty days longer the earnings double and will continue to increase until Uncle Sam up to 18,000 barrels daily capacity. With the bally cents per share, will place this great indenlarge from time to time to this capacity.

There are millions to be ng oil besides the great do that is now certain that addition to the different re will grow stronger every is bound to increase as the natural consequence. Let

reason reign, and no matter whether you live in New York, Canada, Florida, California, you can invest in Uncle Sam stock and you will get a square deal and almost certain great returns for your investment, for the company is following safe, practicable course and will continue that way.

Work Progressing on Uncle Sam Refinery No. 3.

On the banks of the Arkansas by Tulsa, in the very heart of the greatest oil field in the West, Refinery No. 3 for Uncle Sam will be completed during the next sixty days. The big boilers arrived this week. Several carloads of structural steel will be shipped the first of next week and the other shipments will follow rapidly. A large lubricating plant will be built at Tulsa, and a refined oil line built down the Arkansas River to Fort Smith, from where refined oil will be shipped by light barges to the Southern markets, after supplying all of Oklahoma, and Northern Texas and Arkansas.

Million Dollars Cash and Ten Thousand Stock-holders.

Will soon be back of Uncle Sam. With this vast strength it will be able to protect the interests of the smallest stockholders. If you have moner to invest—and most every one has—don't scare at shadows, but remember that Uncle Sam with its pipe lines and river barges completed can market oil just as economically as the trust, and considerably more so, for the public in general despise the methods of the trust and favor Uncle Sam wherever given a chance, and they will soon have the chance in every principal city in Kansas and neighboring States.

Why You Should Invest Now.

The time for any investor to secure a good deal is when the other fellow needs money. Now while Uncle Sam is raising more money than any time during the life of the company, still just at this time we need more in order to crowd the work. Just look ahead sixty days and consider what will be the condition then. Both of the last two big refineries will be completed and paid for. At least eight more large

Another great oiler was completed last week on Eleven Hundred acre Lot 43, Osage, and another Uncle Sam drill is down to-day within 48 hours' run of the pay dirt, and may develop the greatest oil pool in the Osage country. This stock is not only offered at a price that is right, but by development the assets back of it are continuously increasing.

Miles of pipe line are arriving daily. Pipe line pumping stations are being completed, and it is to crowd all this great work to final completion that this stock is offered at the present low price. By investing a few hundred dollars in Uncle Sam now you will not only help a good cause on to grander success but will secure a safe dividend investment that you will not have the opportunity to procure right away again.

producing oilers will be completed, and the 125 miles of pipe line will be completed. Thousands of oil burners will be installed. More distributing stations completed and the cash sales of oil will be close to two thousand dollars per day and all other departments of this great organization advanced accordingly. Certainly you can not afford to turn down an investment in Uncle Sam stock under these conditions, which can be proven unless you desire to insult your own pocketbook.

Write or Wire for Particulars and Pictures.

This company has just what is advertised. In the different departments, at the refinery, on the pipe line, in the oil fields and at the different distributing stations over one hundred men are crowding the great work of the company on to success. We have about eighty pictures taken from real life in the different departments showing part of the great work, also more complete reports. We will be glad to mail them to any investor in the United States or any foreign country, and any other information desired. We stand ready to prove any statement made herein and solicit your investment in this stock in good faith and will see that you get a square deal in fact as well as in words. The company will not sell over thirty thousand shares to any one man, and reserves the right to reject any offer by returning the remittance. Would rather have five men subscribe \$200 each than one man \$1,000, for this company is a common man's organization and wants as large a number of stockholders among the middle class as possible.

discussions, till an uninvited individual butted in with this resolution: "Resolved. That the best interests of the farmers of America and of a great majority of the American householders, in town or country, would be much benefited by the establishment of the parcels post." Then he took the floor to exercise the constitutional prerogative of every free-born Kansan, namely, to speak in behalf of his own resolution.

He said the parcels post, in connection with the free delivery, which is now practically universal, would enable that great commercial emancipator, Montgomery Ward, to extend his counter right down to every farmer's front door, as it were; and whether the farmer wanted a pound of tea, a pair of gum boots, or a baby wagon, he could have them any or all of them, delivered to him out of one of the biggest and freshest stocks of goods in the world, with the biggest Government on earth to run the errand for him. The resultant economy for the producing classes, he said, would largely compensate for low prices for products and low wages for work. When the parcels post was once established, he (the speaker) would not be obliged to hitch up and drive four miles, through the mud, down here to Blankville and then have to pay double price to a local skinflint, whose little, measly stock of goods, as to the size of it, was in inverse proportion to the cost of it. And there was another pirate, he said, besides this Blankville merchant, that the resolution, when it was realized, would put down and out, and that was Tom Platt. He used Tom Platt's name merely in representing the express combines of the country—a combine which, by its extortions and discriminations, had forfeited the right to exist, and which, on account of its political corruptions, with a lobby in every State capitol, and a representative in every important party convention, he had come to regard as a positive menace to democratic institutions.

Tom Platt had no spokesman on the ground, but the Blankville merchant was more fortunate. His father-in-law, a neighboring farmer, was in the front row of seats, and when he struck the floor to reply it was like a voice out of a whirlwind. That "pirate," as he had been called,

in Blankville, was his son-in-law, he said; and he wasn't no pirate, neither! He just charged for his goods what he had to to make a decent living for his family. And did they want to take the bread out of his children's mouths, so to speak, by bringing him into competition at close range with millionaire concerns that would overwhelm him like a wave? His son-in-law, he said, had as good a right to live as the farmers around him, if they were fifty to one. The very friction and delay and expense attendant upon supplying individual wants, of which complaint was made, was the basis, largely, of the business prosperity that the Blankville merchant and his fellows in all other small towns enjoyed; the conditions of trade referred to were in the nature of assets of these men, in fact those conditions might almost be said to stand in the relation of vested rights. And he would never cease to denounce a Government that would use its great strength to break those little merchants up. Now, it is proposed to overthrow the rights of those men because it is convenient to the majority to have them despoiled. When did it come about, he wanted to ask, that the rights of the minority ceased to have consideration?

And as for the express company—that some people wanted to see destroyed, he would like to know who it was but that same company which gave our people a reduced rate from Blankville to Kansas City, that year we had the peach crop, and saved the Blankville fruitmen several thousand dollars (some reports said \$8,000) in that one season? Why, some people, as it looked to him, didn't know when they were well off or when they were well used, and he wanted that Institute to "set down" on all such socialistic schemes as that proposed in the resolution just introduced. And as for keeping express people and railroad people out of politics and conventions, he wanted to inquire who would be left to run the politics of the country if all men of substance and experience in large affairs were to be barred? Why, who, indeed, would be left but agitators like the preceding speaker, whose only equipment for public affairs was the possession of an iron jaw?

How Mr. Miller got his term back in the trades and under control is another story, but the instant shows the direct

tion the line-fence takes that runs down between the advocates and the opponents of the parcels post. Most country consumers want the parcels post; most country dealers want it—not!

OPPOSITION TO THE PARCELS POST.

In the city the need of it and the dread of it are both less than in the country. But it is from the cities that the great opposition comes which prevents the parcels post from coming. If there were no influences or interests involved but the direct interests, namely, country people, including those from the country towns, on the one hand, and the express companies and small retailers upon the other, the parcels post would be established before Oklahoma is admitted as a State.

The opposition that controls comes from several sources. One is that large fraction of society which is against anything that promises to disturb the existing order. They reason thus: If a part of the express business may be absorbed by the Government, why not all of it? If the Government may take over that part of our transportation commonly called express, why not go a step farther and appropriate all kinds of carriage by rail? Where is this thing going to stop? Then there is that silent, but influential class, who look with dread and distrust upon any movement tending toward greater equality among men. The parcels post would be a step toward equality. With it the poorest farmer on the rural route could buy, to the extent of his small means, just as efficiently as the richest banker, and then have his purchases delivered to him by the same power that directs the Army and the Navy. The prospect is pregnant with hope or abhorrence, according to the way you look at it.

It was a fine tribute the British Government paid to Sir Walter Scott when its proud warship bore that distinguished author through summer seas in the last months of his fatal illness in a vain quest for strength. Such attentions, hitherto, have been paid exclusively to the learned, the powerful, the rich, the valiant. But now come these iconoclasts and propose that a Government agency, more powerful and more significant than a man of war, namely, the mail service, with an industrial attachment, shall be put at the

beck and call of any Farmer Comptroller who can lick a stamp. When the father-in-law in my storyette called the parcels post a "socialistic proposition," he spoke with exactness. It is socialistic. For what is socialism, calmly considered and clearly defined, but a reversal of the procedure as old as history which has made the bee rather than the hive the center of concern, substituting therefor an effort on the part of organized society—that is the Government—to give to the public welfare that paramount consideration which hitherto has been given to private advantage?

EFFECT OF THE PARCELS POST.

Men are like horses in shying at what is new to them. Many people shy at the parcels post because it is paternalistic. The same people go right along past the public schoolhouse every day without picking up their ears and yet the public school at which all the children, regardless of property or poverty, are taught, and to the support of which all taxpayers must contribute alike, regardless of parenthood, guardianship, celibacy, or sterility, is the extremist limit of paternalism that Americans have yet incorporated into law or custom. The point is the public school, with all its leveling and socialist attributes, is accepted because we are used to it. The parcels post won't be a particle more scary when we grow accustomed to it. In my estimation there is no more question about the effect the parcels post will have upon the storekeepers of cross-roads villages and country towns than there is about the closing up of the private schools which took place when the public schools came in. When the parcels post gets into full action, the merchants I have referred to will have lots of leisure to sit on their lonesome counters and watch the Government mail-carriers drive by delivering to their quondam customers the parcels put up by Jones Bros. and Montgomery Ward.

It is only fair to say that the little dealer, wherever he may be located, is threatened with extinction by a variety of causes besides the parcels post—causes that in the main go to make up what we call "progress." The department store, the trolley car, the asphaltum pavement, the electric light, the

(Continued on page 670)

Dairy Interests**Water for Cows.**

An exchange urges very properly that inasmuch as it has been proved by actual experiment that the average cow will drink 1,600 pounds of water a month, great care should be exercised to provide her with water. That is true enough, but there are two other points that need to be also included.

1. This water should be pure. Impure water is just as hurtful to the health and vigor of a cow as it is to a human being. It produces disease just the same. It reduces the amount of milk the cow would naturally give.

Where is it impossible to have springs of pure, running water, a good substitute is a well, windmill, and tank, with a float which throws the mill out of gear when the water in the tank rises to a certain height.

2. The water should be easy of access for the cow, both in the pasture and the barnyard. With a large herd of cows, say 30 to 50, it is a good plan to have two or three watering tanks in the yard, where the cows are watered out of doors. It is worth while also to have a man remain in the yard while they are drinking, to drive the master cows away from the tanks as soon as they have drank their fill. In turning cows out to drink, it is a good plan to first turn out the underlings and the most timid ones, giving them plenty of time to get what water they want undisturbed. Lots of money can be lost with a herd of cows by being indifferent or careless on this water question.

Education vs. Ignorance.

A Kansas creamery reports that for a year just past it has paid one patron \$60 per cow for each cow milked in a herd of sixteen, and five of the number were helpers milking with first calf. To another patron it paid \$25 per cow in a herd of twenty, and to another \$17 per cow in a herd of thirteen. The latter herd is not to be considered in our remarks, for the cows were allowed to "rough it," and no man who pretends to do dairy-farming will so handle his cows. The \$25 cows were given good roughage and grain in abundance, were warmly stabled, and kindly treated. The \$60 cows were bred for the dairy, fed a balanced ration, and otherwise treated about as their \$25 neighbors. The cows of each herd were neighbors, belonging to farmers of the same community, kept on the same kind of land, and the climatic conditions were identical.

What produced the difference in the earnings of these cows? It was the difference in the owner. The feeder of the \$60 cows was a student. He studied the question of breeding a good cow, what and how to feed and how to care for her. He read a dairy paper weekly, read and filed away for future reference bulletins from agricultural colleges, and studied a book on "Feeds and Feeding," which cost him \$2. He owned and operated a Babcock test, and scales being convenient to his milk-can in the barn, the weight of each cow's milk night and morning was recorded. In payment for this exercise of brains, he received \$35 more per cow from his milk for the year than did his neighbor. A profitable dairy was the reward of his study.

The \$25 man used to laugh at his \$60 neighbor and call him a book farmer, saying that he'd see the day when he could afford to spend his time in the corn-field rather than with his cows, but that time seems farther off than ever. The \$25 man didn't believe in

studying dairy questions. He knew a cow would give plenty of milk on any kind of feed; all she required was plenty of it. He knew that it didn't pay to pump warm water for the winter drink, and he was very sure that the weighing and testing business was a humbug and unnecessary. The result is pitiful. That man received \$25 each per year from his cows in milk; it was \$5 per head more than the feed cost. He and his children worked and tugged all summer making feed for those cows, and realized a mere pittance for their trouble.

The \$25 man is grumbling—dairying don't pay. His test does not suit him and the butter-fat prices are too low. It is impossible to make that man see that the creamery is not to blame for his condition. His is a plea of dissatisfaction and so it will be ten years from this time. The milk from each of these herds was handled in the same creamery and the butter packed in the same tub. It went into the common market and sold for the same price. For one man the creamery made a living and allowed him money besides; for the other it paid little for feed and trouble, yet the fault lay not with the creamery. The \$60 man was a dairyman, the \$25 man ran a steer dairy. He wouldn't take a year's subscription to a dairy paper as a gift. He would do nothing to educate himself. The low results from his herd was his punishment for his ignorance.—Nebraska Dairyman.

Milking-Machine.

Will you please tell me through the KANSAS FARMER where I can secure the milking-machine (spoken of in the KANSAS FARMER of March 22) that was used at the National Dairy Show, also the price of the same? E. C. P.

Harper County.

A milking-machine, such as was exhibited at the National Dairy Show in Chicago, may be seen in operation at the dairy-barn of the Kansas State Agricultural College in a few weeks. This machine is expected to arrive here in a few days, and will be installed as soon as possible. The dairy-barn will have to be equipped with air-pipes and connections and the gasoline engine set up. These will be the only requirements necessary for the use of this machine in our barn, as our stalls are arranged for the machines without any further change.

C. W. MELICK.

Silo Questions.

Can you give me the size and cost of a silo that will supply four cows for a period of eight months? Also the manner of storing silage and other particulars pertaining to the silo?

Butler County. C. M. Cook.

I would advise you to build a 50-ton silo for your four cows, but if you intend to go into the dairy business it will be less expensive in proportion to the size of your herd to double the number of cows and build a 100-ton silo. We have two 100-ton silos here at the Experiment Station, which cost about \$150.00 apiece. These were made with cypress staves, using a cement foundation and bottom to the silo. The staves are dove-tailed together with iron bands around the outside to make them air-tight.

In filling a silo, corn is cut and thrown onto a low wagon, immediately hauled to the silo, run through an ensilage cutter, and carried through a tube by means of an air blast into the silo window. It is delivered into the middle of the silo and tramped around the outside while being filled, for in settling the ensilage tends to adhere to the sides of the silo which prevents packing around the periphery, while it settles perfectly air-tight in the center.

The essential feature to preserving silage is the same as that of canned products, that is, the exclusion of air. We have found corn to make the most satisfactory crop for storing in the silo, although alfalfa, soy-beans, Kafir-corn, or most other forage-crops are kept more succulent and juicy, therefore, making better feed than when in their natural state. The use of a silo means the production of more and cheaper protein per acre and succulent feed during the dry summer months and during the winter, storing the greatest amount of feed in the smallest space, and increasing the capacity of the farm. Silage is one of the most palatable feeds for the dairy cow.

C. W. MELICK.

H. G. Van Pelt Elected.

At a recent meeting of the board of trustees of the Iowa Agricultural College, Mr. H. G. Van Pelt, who graduated in 1903, was elected to the position of assistant professor of animal husbandry and superintendent of the dairy-

Peerless Cream Separators**Reasons Why the PEERLESS is the Best**

1st—Twice the capacity of any other bowl. That is to say two times smaller than any other bowl of equal capacity.

2d—Compound feature, two bowls in one, hollow bowl, and disk bowl, combining all the features of the tubular and disk machines.

3rd—Enclosed frame. Free from dust. Injury resulting from machine impossible.

4th—Perfectly noiseless.

5th—Heavy enough and strong enough to lift a box car, which insures durability.

6th—The bushings made of phosphor bronze—the most serviceable material for the purpose. Fitted and guaranteed to be accurate to $\frac{1}{2}$ of 1-100 of an inch.

7th—Every journal bushed with brass or phosphor bronze. This fact together with the fine adjustment described above, accounts for the light draft of the Peerless machine. Each bushing is made in duplicate and interchangeable and if at any time they show wear they can be replaced at small cost.

8th—at normal temperature the skimmed milk will always show less than 5-100 of 1 per cent of butter-fat and generally less than 1-100 of 1 per cent butter fat. PEERLESS CREAM SEPARATORS are guaranteed to anybody—everybody, anywhere—everywhere.

farm. The college authorities consider themselves most fortunate in securing the services of so well-trained a man as Mr. Van Pelt. He is a worthy example of what hard work and a determined purpose will do for a young man. He entered the college in 1898, a poor boy. By working in the barns during the school year and on stock farms during his vacations, he earned enough money to defray all of his expenses for a complete college course.

Upon graduating, he entered the employ of Swift & Co. as salesman in their animal food department. He made good, and was rapidly advanced. In the spring of 1904 when the Jersey cattle breeders were scouring the country in search of the most competent man to be had to take charge of their cows in the famous St. Louis dairy test, Van Pelt was given the preference over all others and was induced to take up the work. In this work he won for himself an international reputation as a feeder and manager of dairy-cattle. The cattle under his charge won everything in sight. Since completing the test he has prepared for publication a comprehensive statement of the methods of feeding and management practiced in the St. Louis test, which has been very widely copied by many of the leading agricultural papers in this and other countries. During the winter of 1904 and 1905 he was instructor in animal husbandry at Purdue University, Lafayette, Ind. Since then he has been employed on the Auten Farm, at Jerseyville, Ill., and the Hartman Stock Farm, at Columbus, Ohio.

In his new position he will devote his sole time to instructional and investigation work in connection with dairy-cattle. He will be in charge of the Iowa College dairy-farm which is now being equipped with buildings and cattle. It is believed that this addition to the animal husbandry staff will materially strengthen the same.

Horticulture

The Squaw-Apple.

EDITOR KANSAS FARMER:—I wish to call the attention of the readers of your paper to a plant we have that has many valuable qualities, but the fruit of which is quite tasteless. I refer to the common squaw-apple.

It grows freely on the thin soil of our hills. It is quite hardy, and even this dry spring has an abundant crop of attractive red and green berries.

Could some of our scientifically inclined farmers experiment with this plant, as Luther Burbank has with his plants, we might by crossing it obtain rich results.

Here is a wide field for some experimenter, with a possible fortune as the result.

A SUGGESTER.

Chase County.

The Cherry.

E. F. STEPHENS, CRETÉ, NEBRASKA.

The cherry has less to contend with than the apple or plum. The tree attains nearly all of its growth during the early portion of the summer while there is an ample supply of moisture in the soil. It ripens its crop of fruit and ends summer growth before the dry periods of July and August. Hence, it is better suited to dry climates and dry soils than such varieties of trees as require a longer season for maturity. The cherry is peculiarly suited to dry soils and to the higher and drier elevations.

VARIETIES.

In Nebraska we can grow only the sour and sub-acid varieties of the Morello type. Among these the Early Richmond for early, Large Montmorency for medium, and the English

Morello for late are the three most reliable varieties. Since all of the red-juice cherries in humid climates are subject to the shot-hole fungus, it is not wise to plant the English Morello in Eastern Nebraska or in other climates where there is a large amount of moisture in the atmosphere during the summer season. The Early Richmond and Montmorency can endure a greater degree of humidity than English Morello or any other variety having red juice. This fact has led planters of Eastern Nebraska to drop out the English Morello and confine their planting mostly to the Early Richmond and to a moderate proportion of Montmorency.

The writer has found it utterly impossible to grow the sweet varieties of cherry in Nebraska, because the trees are not hardy in our climate. A sweet cherry may be made to live perhaps three to five years, but is almost invariably destroyed by the first severe winter. It is not wise to plant any of the Duke family of cherries. They are not as hardy as the Morello type and not nearly as productive.

METHODS OF PLANTING.

Since the tree does not attain large size in the farm family-orchard, the cherry may be planted sixteen feet apart each way. In town gardens where the trees are not likely to receive cultivation and therefore will not attain as large size, they are sometimes planted as closely as twelve to fourteen feet.

In planting the trees care should be taken to dig the holes at least two and a half feet across. It is also wise to dig them eighteen inches in depth. If the subsoil is of poor quality, it should be thrown to one side and in refilling the hole use surface soil of the best quality. It is admissible to use a couple of shovels full of very fine old manure. That from the cow-yard is best suited to the purpose. It is practicable to use fresh manure on the surface around the trees, allowing the rains to dissolve the application and leach it into the ground.

In planting be sure to set the tree with great solidity, tramping the earth firmly about the roots. After the tree has been solidly set and several inches of earth above the roots, it is admissible to apply two or three palls of water. After this has soaked away, finish filling the hole, leaving the surface loose.

PRUNING THE TREES.

After the trees have been planted, they should be pruned the same day. In forming the head of the tree it should be remembered that the cherry suffers more from bad methods than any other tree. The head should be left as close to the ground as possible. Do not cut away any of the lower branches. It is wise to shorten all of the limbs, trimming in such form that each branch will have three or four good, strong buds remaining. The central shoot should not be shortened as much as the others, since this should be allowed to make an upright, vigorous growth and help form a symmetrical head.

It is well to bear in mind that if the side branches are removed and the trunk of the tree exposed to the full force of the winter's sun, the tree will suffer from sun scald. The bark on the south side of the tree would be killed. The cherry-tree should be headed within eighteen to twenty-four inches of the ground. In its after care the cherry requires less pruning than other fruit. Simply remove the cross branches that tend to crowd or rub each other. The removal of large branches from the cherry-tree should be avoided.

CULTIVATION.

If planted in a climate where there is not always an ample supply of moisture, it is better not to grow any crop among the cherry-trees; rather conserve all possible moisture. Where trees receive suitable care and culture, they should the first season make a growth of eighteen to thirty inches.

The tree should commence bearing when three or four years planted, and when five or six years of age should be yielding a very fair crop of fruit. At the age of nine years from planting, the writer has picked more than a hundred quarts from a single tree.

When the trees are too large to cultivate both ways, the writer has found it to be decidedly advantageous to mulch the row one way with stable litter or straw manure and continue to cultivate between the rows. Should the planter mulch the entire area of the orchard, it would have a tendency to bring the feeding roots to the surface. Cultivation one way compels a considerable portion of the feeding

Cleveland Cream Separator

Direct to you
30 Days Test

Cleveland

You want an easy running separator and the Cleveland is the only all ball-bearing separator made.

You want an easy cleaning separator and the Cleveland is the first separator and the only one that uses aluminum in its slimming device. The only metal that milk will not stick to. No coating to wear off. Non-corrosive, non-poisonous. The metal recommended by scientists for cooking utensils.

You want a long lived separator and the Cleveland has the fewest parts of any separator made and gets results at slowest speed. Fewer parts, less wear, less repairs. The Cleveland is a guaranteed perfect skimmer.

You want to save money and the Cleveland is the only all-grade separator that is sold at a reasonable price. And it will let you prove that for yourself before you invest a cent by trying a Cleveland on your own farm. No money in advance. Our catalog tells you how to get a Cleveland and save money. Write for it.

THE CLEVELAND CREAM SEPARATOR CO.
Dept. D, 34 Michigan Ave., N. W., Cleveland, Ohio.

well as by the wind, so that the same flood which makes the sand-bar often seeds it with the tree which will redeem it. In heavier soils other shrubs, such as the smooth sumac, the wolfberry, and the wild plum, which grow in clumps and are able to win in the fight against grass, are forerunners of the forest.

The one thing which, above all others, makes for improved conditions on the plains, and gives assured hope for better tree-growth in the future than in the past, is the cessation of fires. Before the country was settled, fires were both frequent and extensive. Only the trees along streams could survive, and, at best, make a stunted, scrubby growth. Reproduction was extremely uncertain, owing to the loss of seedlings, and grass gained the ascendancy over all other forms of vegetation. But with the nearly complete stoppage of fires since the country has been permanently settled, conditions are greatly improved. Several tree species have succeeded, despite other most adverse circumstances, in forcing their way into the very heart of the plains by following up the water courses tributary to the Missouri River. It is, therefore, quite certain that with protection they will in the future steadily gain new territory.

As a result of the study, it becomes clear that the forests of this region are much more restricted in area and poorer in character than they need be. That it takes a long time to grow trees fit for any practical purpose is true, yet a region without trees is seriously handicapped, and few farmers can do better for their property than to establish groves upon it. The Government is so well convinced of the practicability of growing trees from seed in this region that it has created two forest reserves, containing 208,000 acres, in the sand-hills of Nebraska for this purpose.

The tables contained in the bulletin make it possible to learn how land now given over to stock can be made, in a comparatively few years, to produce a stand of trees whose value will exceed the accumulated rents as pasture.

The bulletin closes with an account of the tree species found in Western Kansas and Nebraska.

Indian Runner Ducks.

Can you or any of your readers tell me anything in regard to Indian Runner, or leghorn' ducks, their size, laying qualities, rapidity of growth, immunity from disease, and vermin?

Where could pure-bred eggs be obtained? Have read they were great layers, but thought it might be an advertising scheme. S. FRANCIS. Osborne County.

ANSWER.—There are several breeders of Indian Runner ducks in this State, and some of them advertise them in the KANSAS FARMER. O. C. Sechrist, Meriden, Kansas, breeds them extensively and is a reliable gentleman to deal with. He had them on exhibition at the State Show, taking all the premiums. A noted poultry writer has this to say of them: "The best laying ducks undoubtedly are Indian Runners. The eggs from them are not so large as from the Pekin duck nor do they make such good table fowls, but where eggs are the object they are very profitable, being hardy both as ducklings and adults, and good winter layers. Their usual weight, though they are not very large, is about 4 pounds and they are fine in bone, usually have a good heart, and are of most delicious flavor. They do well on soft, marshy ground whenever they can have a free run, but in confinement they would be quite uneasy and uncomfortable. They are non-sitters and rarely if ever become broody." Writing on this breed, Matthew Hunter says: I can with confidence state that they are the ducks to supply the table with eggs, and to those who prefer duck's eggs to hen's eggs, they come as a boon, as they can almost be relied on all the year round, hence, one need never despair of not being able to have ducklings when others can scarcely get eggs. I consider them the most profitable breed to keep, as they will pick up almost all the food they require, returning for a little supper and bed, which saves much time in duck hunting. As to a morning meal they never look for any and can not be persuaded to stop and have it, preferring to find their own. They are not particularly fond of water, beyond a bath and drink, and their sole aim seems to be to roam about the fields in search of insects or animal food. They will pay well to cross with other breeds, to improve laying and early maturity for the table. They lay a large egg for the size of the duck, averaging about five to the pound, and are, in my opinion, the most profitable utility breed of ducks that can be kept." The color of the breed varies, but their points may be put down as follows: Head and neck, fine and long; beak yellow, bordering on green; duck that of leaden green; markings lustrous green; black on top of head and on each side of cheeks, going past the eye V shaped; in the duck it is dark brown, almost black; color, nice fawn breast and back, running much darker on duck by the aid of markings; wings white, when crossed, gives them the effect of saddles on the back; style and carriage upright, lively, and alert, better when startled; movement a perfect run, without the waddle; head carried very high. The origin of this variety of duck appears to be almost unknown, though we believe the first consignment was brought to this country by a sea captain from India.

Overfeeding Chickens.

I would like to know if you or any of the readers of your valuable paper can tell me what ails my chickens and what to do for them. They have been sick for about a month. Out of a flock of 175 I have lost about two dozen. Some of them die suddenly and some linger along for a couple of weeks. They first took with a dysentery and the droppings were either quite green or tinged with yellow. I do not see much of that color any more, but the droppings are quite thin and even sometimes watery yet. From the appearance under the roosts the whole flock must be affected, and yet the most of them look fine with red combs and voracious appetites. They lay well, but I notice every morning several eggs in all stages of immaturity under the roosts, indicating a weakness. Just before they became sick they were caught in a sudden rain storm and became drenched to the skin. Have been feeding them a soft feed in the morning and whole corn at night. Lately I have been taking

nearly all grain from them; letting them get what they can on the range, but they do not get enough that way to satisfy them. Have been giving copperas in the drinking water. Am now trying kerosene. Have also given condition powders. Will some one please advise me? The disease seems to me peculiar in that it hangs on so long, yet is not very fatal, although none that have been very sick have recovered. I remove all droppings at once. MRS. T. H. IRWIN.

Saline County.

ANSWER.—Your chickens are probably too fat, and it would be well to feed sparingly for a while. Feed no mash at all, but if you have lots of skim-milk, boil that and let them have all they will drink of it. When you feed grain see that none of it falls among the droppings of the fowls, as that is generally the way that disease spreads among a flock. The drenching in the cold rain storm probably started the trouble.

Birds That Pay.

Some hens are not worth their keep. Others produce enough to cover the cost of their handling. The hens that pay are those that more than meet the expense of money and time necessary to make them worth while. Here are three classes of hens, and the last is the one that we can have if willing to pay the cost.

What is necessary to own birds that pay? It takes more than money to do this. You can buy birds that can pay, but it is another thing to have them pay you after you own them. Not only must you have the right kind of hen, but you must use time and thought in caring for her to make her of the "paying kind." This kind is usually hatched from a paying strain. The paying hen that comes out of a flock of good-for-nothing birds is seldom met and is not worth hunting for. It takes time, it takes money, it takes born hen-sense, to produce a flock of paying hens. It takes a very little neglect to send this flock back to the class of non-paying birds.

Paying birds are a delight to the eye. You like to show them to your friends, and linger in your description of what they are and what they have done for you. This class of birds—because they pay—receive thought and attention from you. You gladly take good care of them; you are willing to properly mate and feed them; you look for fresh blood to improve your flock. They never make up a large part of your flock when you sell the cream of the chicks every year. Money-making flocks are made up of the best you raise, always letting the second quality go to market.

Paying birds live in houses free from vermin and supplied with pure air and water. They get food that is needed to bring the profit to the produce point. Cheap food, because it is cheap, never helped to produce the paying hen and keep her running to the nest. Hens that pay can be yours if you are willing to do your part. Hens that more than pay, that bring splendid profits, are what the world is asking for, is looking for, is demanding. Are you going to be among the breeders who fill the orders for this kind of bird?—Mrs. B. F. Wilcox, in Northwestern Agriculturist.

Chicken Talk.

Many of us in Kansas and surrounding territory have a good thing, and one that is cheap, right at home. I refer to crude oil. The writer is using it for the second season. Last year I used it freely about the roosts and hen-houses with good results. This year I am using it in coops and boxes for sitting hens. I use it sparingly on the inside of the nest boxes, but paint the bottom freely with it. I also use lice powder on hens and in the nest about once a week. One method or both has kept vermin away, and I have had good hatchings. In several instances every egg has hatched, and with two or three exceptions every fertile egg. In fact, my hens have averaged better than my incubator this season and have not caused much more trouble, as I find Plymouth Rocks good sitters and mothers.

To make a cheap coop with little trouble, take a coffee box or one of about that size. Take an inch board the length of the end of the box and 6 or 8 inches wide, saw it from corner to corner and with cleats nail it on top of the ends of the box. This will give the shape for the roof. Take narrow pieces of tin and with small lath nails, nail on in front, leaving spaces for lath to slip in. Make a little door. A single board will often do with cleats on, and with leather hinges

LANGSHANS

BLACK LANGSHAN EGGS—From main flock, 15 for \$1.00; 100 for \$5.00; from pen, \$2.00 for 15. Mrs. Geo. W. King, Route 1, Solomon, Kansas.

BLACK LANGSHANS—Hens scoring 98 and upward—headed by 2d and 4th prize cockerels from Kansas City 1906 show. Eggs, \$2 for 15; \$3.50 for 30; special price by hundred. Can fill orders at once. Mrs. C. S. Cross, Fair Acres Farm, Emporia, Kansas.

BUFF LANGSHANS

 \$4.00 per 12 eggs. White \$2, Black \$2, \$1 and \$5 per 100; Buff Leghorns, Orpingtons, Cochins, S. & D. C. B. and White Leghorns, B. and W. Rocks, W. and S. L. Wyandottes, L. Brahmas, \$1.50 to \$2.00 per 15. Toulouse Geese eggs 20c each. M. B. turkeys, \$1.50 and \$2 per 9.

Imported and native high-scoring blood in our yards. America's Central Poultry Plant. J. A. Lovette Mullinville, Kans.

LEGHORNS

ROSE COMB BROWN LEGHORN EGGS, 15 for \$1, 50 for \$2.50, 100 for \$4. Mrs. John Holzhey, Benden, Kans.

BUFF LEGHORNS AND BUFF ORPINGTONS. Catalogue free. W. H. Maxwell, 1240 Quincy St., Topeka, Kans.

STANDARD-BRED SINGLE-COMB BUFF LEGHORNS—Headed by first prize pen Chicago show 1908 and took six first prizes and first pen at Newton 1904. Eggs \$3 for 15. S. Perkins, 801 First street, Newton, Kansas.

SINGLE-COMB WHITE LEGHORN cockerels, \$1 each; two or more, 80 cents each. Fine white, pure, thoroughbred birds. Also a few Barred Plymouth Rocks, barred to the skin—fine, pure and vigorous; hens, cocks and pullets, \$1 each; two or more, 80 cents each. All of our customers are very well pleased. We will make reductions on large lots. Meadow Poultry Farm, Coulterville, Illinois.

EGGS FOR SALE—S. C. W. Leghorns, W. Wyandottes, \$1 per 15. W. H. turkeys, \$1.50 per 8. Emdegeese, 20c each. W. African guineas, \$1 per 17. All guaranteed pure-bred. A. F. Hintley, Route 2, Maple Hill, Kansas.

FOR SALE—Exhibition S. C. Black Minorca cockerels, \$2. I guarantee them. Address George Kern, 817 Osage street, Leavenworth, Kans.

Pure Single Comb Brown Leghorn Eggs—30 for \$1; 100 for \$3. F. P. Flower, Wakefield, Kans.

Buff Leghorns

S. C. Eggs, 30 for \$1.25, 100 for \$3. John A. Reed, Route 2, Wakefield, Kans.

Johnnie Chase, Glasco, Kas.

Breeds Black Minorcas, S. C. Brown Leghorns and Barred Rocks. Second to none in the state. Eggs, \$2 per sitting.

PRIZE-WINNING S. C. BROWN LEGHORNS

Exclusively. (Short's strain.) Farm stock eggs from pen scoring 198. \$2 per 15; \$1 per 15 as they run. Incubator eggs a specialty.

MRS. W. O. MAGATAGEN, BEATTIE, KANS.

Mention 'KANSAS FARMER' when writing.

Rose Comb Brown Leghorns EXCLUSIVELY

Farm raised. Eggs, per sitting of 15, \$1. Incubator users write for special prices in 100 lots.

P. H. MAHON, Route 3, Clyde, Cloud Co., Kans.

ROSE COMB BROWN LEGHORNS AT READING, KAN.

Pure stock. 15 eggs \$1.00; 50, \$2.75; 75, \$4.00; 100, \$5.00. Main flock farm range. Have pen to furnish eggs no relation to stock or eggs sold last year. These are for my last year's customers.

MRS. IDA STANDIFERD, "Up-To-Date" Farm

Rose and Single Comb White Leghorns and White Wyandottes

IN ALL THEIR PURITY Unsurpassed in every respect for beauty, utility as winter layers. At State show, the largest in the U. S., just held at Topeka Kansas, 26 prizes were awarded me. Write for my catalog, giving prices on stock and eggs.

W. S. YOUNG, McPherson, Kansas When writing mention this paper.

BUFF COCHINS

BUFF COCHIN EGGS—From high scoring prize-winning stock, \$1.25 per 15; \$5 per 100. Stock for sale. A. R. Gage, Minneapolis, Kans.

MAMMOTH BRONZE TURKEYS

EGGS FOR HATCHING from large high-scoring M. B. turkeys, \$2 per 9; S. C. and R. S. Brown and S. C. White Leghorns, S. Spangled Hamburgs, S. C. Black Minorcas. Prize-winners in every pen. Eggs, \$1 per 15. Virg. Bailey, Kinsley, Kans.

Eggs for Hatching

M. B. turkeys, \$2 per 10. Golden Wyandottes, \$1.50 and \$1.25 per 15. Satisfaction guaranteed. Mrs. A. B. Grant, Emporia, Kansas.

Eggs For Hatching

WHITE HOLLAND TURKEYS, MAMMOTH, PEKIN DUCKS AND BARRED PLYMOUTH ROCKS, \$1 per setting for any of the above, fresh eggs carefully packed and safe arrival guaranteed. A. F. Huse, Manhattan, Kans.

SAVE YOUR CHICKS.

Use the Itumar Mite and Lice Killer, a mite and lice destroyer. Guaranteed to kill mites and lice if properly used. If not satisfied return bottle and label and money will be refunded.

CHAS. E. MOHR, Glendale Park, Hutchinson, Kans.

CHICK FEED

The cleanest, purest feed for baby chicks on the market. Every day egg producer on alfalfa, hemp, starts the hens to laying and keeps them laying. Wholesale poultry supplies. Send for circular.

The Old Weiss Alfalfa Stock Feed Co.

Wichita, - - - - - Kansas

BRAHMAS

LIGHT BRAHMAS

More prizes than any breeder in the state; 10 Brats this season. Eggs, \$1.50. Cockerels, \$2 to \$4. T. F. Wenver. - Blue Mound, Kansas

Light Brahma Chickens

Chicks pure bred cockerels for sale. Write or call on Chas. Foster & Son, Eldorado, Kan. Route 4

GEES

BROWN CHINA GEESE, Indian Runner Ducks, also Barred Rock cockerels. Prize winners at State Poultry Show.

O. C. Sechrist, Meriden, Kansas.

SILVER SPANGLED HAMBURGS.

MY SILVER SPANGLED HAMBURGS led their class at the last three State Shows; also have World's Fair Premium. Eggs \$1.25 to \$2.00. Mrs. Fay Finkle, Galva, Kans.

INDIAN RUNNER DUCKS.

Indian Runner Ducks and White Wyandottes Eggs

Fresh, fertile and from high-class stock. Price reduced to \$1 per sitting. L. D. Arnold, Enterprise, Kans.

INDIAN GAMES

Cornish Indian Game Eggs.

Write L. C. Horst, Newton, Kansas.

fusen to the front to let down at night. If you want a bottom in the coop, nail cleats on and make the floor to slip in. I always want floors removable, and do not use them unless the ground is wet or there is danger from rats. The above is little more trouble to fix than a common box, and you have a convenient coop with a good roof. I have a number of larger and heavier coops made much on the same plan, but find these light and handy and quickly made. If the good man is too busy, get the boys to make up several or the woman can make them herself. I paint these coops over with crude oil which preserves them and is a hint to lice and mites that they are not wanted. I do not use much oil inside excepting on the floor and I cover that over with about an inch of fine soil.

When many chicks are raised, I find the brooders take less work, but I use both methods and, unless one is well fixed with brooder-houses, think perhaps one method is as good as the other.

D. S. THOMPSON.
Anderson County.

Poultry Notes.

The profit from poultry depends largely upon economical feeding from utilizing materials which would otherwise be wasted. When grain must be purchased to supply their needs, close figuring is necessary if a fair profit is realized.

Linseed-meal is highly nitrogenous and is excellent as an egg-producing food, and if given when the eggs are well supplied with grass or other bulky food, is excellent. If too much is given, however, it will make the hens too fat. A teaspoonful to each hen three times a week is sufficient.

A small box of charcoal kept where the hens can have access to it will serve to arrest disorders of the bowels from overfeeding. The charcoal should be broken to small sizes so that the fowls can swallow it readily, and should be freshly burned. There is no danger of their eating too much.

Too many of those who go into poultry to make a specialty of eggs are too ready to overrate the importance of the breed and underrate the value of proper food and shelter. High prices are paid for pure-bred fowls and then no care is given them and in a short time they are ready to declare there is no money in them.

One object in keeping poultry is to use it as an agent for converting some cheap article into another that is more salable. As a rule there is no necessity for growing food especially for poultry, when it can be procured so low as to permit of utilizing the land for the growth of something better.

The practice of discarding the hens and keeping the pullets may be carried too far and result in a degeneracy of the stock. This may not be noted at once, as it will not be a rapid process, but after a time lack of vigor and vitality will be discernable. Keep a sufficient number of well-matured, vigorous hens to supply the eggs needed for hatching.

One of the best means of removing lice from fowls is to make them do it themselves by having a lot of dry earth where they can dust themselves whenever they feel like it. Sprinkle the earth with diluted carbolic acid. This acid proves too much for the lice and they leave the premises at once, or it causes them to give up the ghost.

One great source of unfertilized eggs is due to the fact that too many females are yarded with one cock. His vitality is exhausted, only a limited number of eggs hatch, the chicks are debilitated, and not a few are so weak that they can not break the shell, and die without being hatched.

The guinea fowl is one of the best foragers known on the farm. It industriously seeks its food without scratching and not only eats the seeds of noxious weeds and unpalatable grass, but its quick movements enable it to be very successful in destroying winged insects. A flock of guinea fowls will do very effective service in this direction and are also attractive and pretty fowls, even though they are noisy at times.

\$18.00 to New Haven, Conn., and return.

Plus \$1 from Chicago, via Nickel Plate Road, June 2, 3, 4, and 5; also via New York City at excursion rates. Return limit June 30, by arranging for extension. Nickel Plate office, Room 298, 113 Adams St., Chicago. (6)

The Simple Life and How to Live It.
READ BY MRS. MARY M'DONALD, BEFORE MANHATTAN GRANGE.

The simple life, I find, is not a very simple subject to treat. I suppose because it is something we have never thought much about. We never think about it, because all our thoughts are absorbed on what we suppose are our needs. Anyway we are almost wholly absorbed in the gratification of our desires; or in trying to overcome the many obstacles to the attainment of our desires. We do not discriminate between our desires and our real needs. But as individual tastes differ, so will each person have his own ideas as to what constitutes the simple life. Our idea is this: The simple life has for its basis simple thought; and simple thought is thought evolved from our inner consciousness, is home thought; thought that is not borrowed.

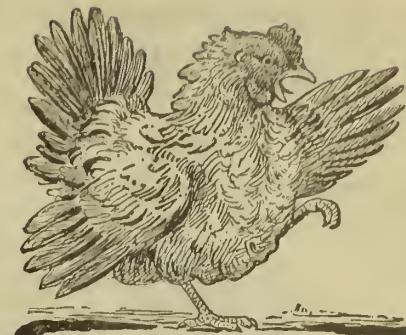

In this day of many books, when the floods of cheap literature throng our desks, it is hard to know whether we are voicing our own thoughts or the thoughts of some one else. But let us not underestimate our great advantages over past ages of the world. We can take what is most congenial to our tastes and leave the rest out. And if we make proper use of the means within our reach, we will find much help in the attainment of a simpler and less complex form of life than we have yet attained. To know a thing we must study it. Study it from our own point of view. Each and every individual should be master of the situation for himself. Each can simplify his or her own life according to his or her desires or needs.

The real remedy is to give the subject our earnest thought, and the means fitted to each case will not be found wanting. No hard and fast rules can be laid down to simplify life. Each must be his or her own judge. But it is well to discuss the subject, for it is a most important one. In this day of hurry and rush, this day of competition in all lines of business, of arduous labors, and many cares, we are overlooking a subject that is of real interest to us all.

In order to get the clearest idea of the simple life, we must go back to primitive man, when, according to the information we have on the subject, our race lived in tents; lived, of course, in the most simple manner imaginable in all the details of their lives, and it seems that this simple life was considered by the wise and experienced ones as the better way; indeed as the only way to attain the higher or spiritual life. As in one instance, at least, they were commanded to build no houses and to plant no vineyards or to sow no seed.

Each age has its own work to do; each age has its improvements and is in advance of the last. This age is the age of work. We work more than ever before, but we do not always work wisely, for we cumber ourselves with much that is unnecessary; much that we soon tire of and wish we had not taken so much pains to acquire. Our time thus spent is a waste to ourselves and no good to any one.

The trouble is that our tastes are exaggerated; our imagination distorted; our thoughts are given a loose reign and lead us a pretty chase. We should train our thoughts and prune our desires to meet the simple demands of nature. We have heard people say that they could not help their thoughts, but we must or we will never attain the new, the true, the

A Crazy Hen

eaten alive with lice can't lay eggs, and is a most wretchedly unprofitable bird. Instant Louse Killer in the nests, on the roosts and in the dusting places will work wonders in restoring peace and harmony. The egg basket will show better and the flock will do better in every way.

Instant
Louse Killer

(Powder or Liquid)

costs little to use and does much. It kills lice on stock and ticks on sheep. It destroys bugs on cucumber, squash and melon vines, cabbage worms, slugs on rose bushes; is harmless when applied to eatable plants. Instant Louse killer put up in round cans with perforated top. Besure of the word "Instant." See that it is on the can—there are over 25 imitations.

higher, simple life. In the life that is honestly and really simple, just common sense is all that is required. Life ordered according to common sense is not to have more possessions, not to desire more than one mind can comprehend at a glance. Anything that adds to mental confusion is not simple, is not natural, and therefore not necessary. Great material possessions bring confusion, distortion, lack of harmony, and undue desire for such things, and rob the mind of its highest, noblest aspirations.

Our age of the world is a peculiar one. Never before was there such a mad rush for material things. It seems that every one is striving to gain the whole world, even if he should lose his own soul. Time was when only kings and princes could live in luxury. The common people did not aspire to a life so seemingly unattainable. American freedom and equality have set the world on fire. The highest gifts of life belong not alone to royalty, but all from the highest to the lowest are free to compete for the prize. What wonder then that all join in the mad chase. What wonder that the world has overstepped the bounds of reason and that extravagance and vulgar show take the place of common sense. Too quickly have the leaders in this mad chase, those who have obtained wealth by their wits, emerged from indigence to affluence. They were not prepared for the sudden change. Simple, natural taste is thus demoralized. Imitation has taken the place of the real. Time was when it was considered a disgrace to work. But now that the shame is taken away, a new danger threatens us. We are taking upon ourselves too much. We have not learned to regulate our lives according to our strength. We have passed from simple to complex at a bound, and are altogether unprepared to appreciate our position. Our ancestors were wise, but their lives were simple. We have sought knowledge rather than wisdom, and have invented many things to lessen labor or to enable us to do our work more easily. But lacking in wisdom, we have let our wants go far ahead of our needs. Knowledge is from without while wisdom is from within. It behoves us to inquire within and heed the voice of reason. To curb our desires and train our thoughts to the simple natural needs of life which brings only peace, hope, happiness. We trust that the next step in the advancement of the human race will be a return to primitive simplicity, embellished by the intelligence acquired in the intervening ages.

The Shawnee County Fruit- and Truck-Growers' Association has been formed. A central market will be established at Topeka to handle the products of the members. The officers of the association are: B. F. Van Orsdal, president; O. F. Whitney, secretary; A. B. Smith, J. M. Kennedy, and W. J. Kearney, trustees.

Cheap Rates

To New Haven, Conn., from Chicago direct and via New York City, June 2, 3, 4, and 5. Extended return limit June 30. Write Nickel Plate Road, Room 298, 113 Adams St., Chicago, for particulars.

The Parcels Post—Can We Have It?
(Continued from page 565.)

telephone, the auto delivery wagon, all are unfavorable to small businesses. By merely taking up a little stick of black rubber with a diaphragm in one end and a wire at the other the housewife in the extreme limits of the city, without leaving her kitchen, can, with the celerity of Ariel or of a disseminated spirit, summon to her ear the downtown merchant to price his wares for her, to discuss their qualities with her, discovering by the very tones of his voice whether he tells her the truth or no, and then the order that she may place with him will presently be delivered in a wagon that propels itself. Is it any wonder she trades at the trade-center, or that the deserted grocer at the end of the car-line tells his casual visitor that times are hard? The toils are also tightening around the country merchant, as well. Every rod of macadam, every mile of suburban railway, every reduction in the cost of travel and whatever tends to eliminate time and expense and friction in supplying the needs of the public, all these are hostile to his thrift. Between the high tides of metropolitan commerce and the rural tradesman the principal barrier now remaining is the delay and cost and vexation of transit. That barrier would be removed in large measure by the establishment of the parcels post.

Call for County Union.

EDITOR KANSAS FARMER:—I hereby call a Farmers' Union meeting in the city of Topeka, to convene on Saturday, May 26, 1906, at 2 o'clock p. m., at Industrial Council Hall, over the "Fair" store, 618 Kansas Avenue, for the purpose of organizing a Farmers' Union in Shawnee County, and to take steps to organize a Farmers' Union Exchange, at Topeka, Kans., for the sale and exchange of garden produce, fruit, and other products of the farm. All members of the Farmers' Union, truck gardeners, fruit-growers, and farmers who are favorable to organization and in sympathy with the Farmers' Union are invited to attend. Each local Farmers' Union in Shawnee County should send five delegates to aid in forming a County Farmers' Union.

Objects of the Union:

To teach true cooperation; to practice justice, equity, and the Golden Rule; to assist members in buying and selling; to discourage the mortgage and credit system; to secure and maintain profitable and uniform prices for grain and live stock and other products of the farm; to eliminate gambling in farm products by boards of trade and other speculators; to bring farming up to the standard of other industries and business enterprises; to labor for the education of the agricultural classes in the science of crop diversification and scientific agriculture; to constantly strive to secure entire harmony and good will among all mankind, and brotherly love among ourselves; to form a more adequate union with those in authority for a more rigid and impartial enforcement of the law, that crime, vice, and immorality may be suppressed; to garner the tears of the distressed, the blood of the martyrs, the laugh of innocent childhood, the sweat of honest labor, and the virtue of a happy home as the brightest jewels known.

This is in no sense a political party, and we shall forever abstain from so much as a discussion of partyism, yet we do not feel it is our right to place shackles upon the mind nor a padlock upon the lips of any one who may wish to discuss for educational purposes the science of government, because upon this great rock must rest all important structures for either mental, moral, social, or financial development.

JAMES BUTLER,
State Organizer for The Farmers' Educational and Cooperative Union of America.

THE INTERNATIONAL SUNDAY-SCHOOL LESSON.

(Copyright, Davis W. Clark.)
SECOND QUARTER, LESSON VIII.
Mark 6:14-29. May 20, 1906.

Death of John the Baptist.

Extremes met in the fortress-palace of Herod Antipas on the occasion of his birthday banquet. Nazaritish abstinence kept vigil in the dungeon. Herodian wantonness blazed and reeled in the banquet-chamber. Self-oblivious devotion below is matched by an overweening ambition above. The forgiving spirit, ready to pray for despiteful users, is offset by a vindictive thirst for the blood of one whose very life was a rebuke to sinners. On the inky agate of the Herodian court the character of John Bap-

ist stood out in high relief, a clear-cut cameo of smoky luster. . . . If any Herod ever needed a post-graduate course in the art of luxury, this one had it. He received his finishing touches during his visit to Rome. At that capital of debauchery he contracted the incestuous and adulterous connection which called forth the Baptist's stern and constant, "It is not lawful."

. . . This banquet seems to have been, in part at least, a military affair. Antipas was toasting and feasting his chilarchs. He was putting them in heart for the war into which his unnatural crime had plunged him. The ivory couches rested upon tessellated floor of banquet-hall in the marble palace, within the impregnable fortress of Machærus. The tetrarch's couriers had brought in haste from every quarter the daintiest viands of fish, flesh and fowl, while wine filled the golden goblets to their brim, and the air was scented with jet and spray of perfume. . . . Herodias was in her boudoir. Ambition was her ruling vice. She had discarded her rightful husband, father of her beautiful daughter, because, forsooth, he had no title. She married one who already sustained the relation of uncle and brother-in-law to her, and in doing so displaced a loyal wife from her husband's side. . . . At length, Herodias had a title and numerous palaces and fawning courtiers, but she had also a Nemesis, whose imperious, "It is not lawful," neither threat nor cajolery nor bribe could silence. Her strait was desperate. The uncompromising preacher of righteousness was making progress with her paramour. If he converted him she would be discarded and all lost. She had secured the Baptist's imprisonment. But locks and bars seemed no restraint to his subtle influence, while his dungeon walls seemed to echo his "It is not lawful!" with ever louder detonations.

. . . The desperate and wicked woman baited her hook with her daughter's modesty, and went angling in the pool of drunken revelry. When Antipas found himself caught, he lacked moral courage to snap the hook. He feared to vex Herodias, and had superstitious scruples about breaking his oath. He doubted the effect of his vacillation upon the courtiers and chilarchs whom he was seeking by this very banquet to attach more closely to himself. On the other hand, he was apprehensive of the effect on the people of the murder of a man who stood so high in their regard. Wretched man! This was the turning-point in his career. With the infamous choice of this hour he began the descent which terminated in disgrace, exile, death. . . . A moment later, Salome, a paragon of voluptuous beauty, flushed with her lascivious dance, carries, with an inhumanly steady hand, a golden platter from the banquet-table, on which rests the ghastly head of the martyr. A choice dish that for Herodias! It was her share of the banquet.

Money Kings Like the De Laval.

The De Laval Separator Co. have just issued a neat folder containing the names of some of the prominent people of the United States who use their machines. This list is a wonder, and reads like a directory of millionaires. It includes the Vanderbilt, Rockefeller, Carnegie, Morgan, Wanamaker, Law-son, Harriman, Hill, Belmont, Gould, Tiffany, Pope, Mackay, Armour, Swift, and Havemeyer names with many others of equal prominence. It also includes the Continental Creamery Co., the largest creamery company in the world. As these men have unlimited wealth they can buy the best machines in the world. They have selected the De Laval.

Cheap Rates to Boston.

\$19 for round-trip from Chicago (plus \$1), via the Nickel Plate Road, May 31 to June 9, inclusive, with privilege of extension of return limit to July 15. \$24 via New York City, all rail, or \$23 via New York City and steamer in both directions between New York and Boston. Stopover at Niagara Falls and Chautauqua Lake points, if desired, within limit of ticket. Tickets good on any train on above dates. No excess fare charged on any train on Nickel Plate Road. Meals in Nickel Plate dining-cars, on American Club Meal Plan, ranging in price from 35 cents to \$1. Mid-day luncheon 50 cents; also a la carte. Three through trains daily, with modern Pullman sleeping-cars to Fort Wayne, Findlay, Potosi, Cleveland, Erie, Buffalo, New York City, and New England points. Trains depart from La Salle St. Station, Chicago, the only depot on the Elevated Loop. Write John Y. Calahan, General Agent, Room 298, 113 Adams St., Chicago, for reservation of berths, in through standard and tourist sleepers, and full particulars.

\$15 St. Paul and Minneapolis and Return.

From Kansas City via Chicago Great Western Railway. Tickets on sale June 1 to September 30. Final return limit October 31. Equally low rates to other points in Minnesota, North Dakota, Wisconsin, and Lower Michigan. For further information apply to Geo. W. Lincoln, T. P. A., 7 West 5th St., Kansas City, Mo.

CORDIAL INVITATION**ADDRESSED TO WORKING GIRLS**

Miss Barrows Tells How Mrs. Pinkham's Advice Helps Working Girls.

Girls who work are particularly susceptible to female disorders, especially those who are obliged to stand on their feet from morning until night in stores or factories.

Miss Abby F. Barrows Day in and day out the girl toils, and she is often the bread-winner of the family. Whether she is sick or well, whether it rains or shines, she must get to her place of employment, perform the duties exacted of her—smile and be agreeable.

Among this class the symptoms of female diseases are early manifest by weak and aching backs, pain in the lower limbs and lower part of the stomach. In consequence of frequent wetting of the feet, periods become painful and irregular, and frequently there are faint and dizzy spells, with loss of appetite, until life is a burden. All these symptoms point to a derangement of the female organism which can be easily and promptly cured by Lydia E. Pinkham's Vegetable Compound.

Miss Abby F. Barrows, Nelsonville, Athens Co., Ohio, tells what this great medicine did for her. She writes:

Dear Mrs. Pinkham:—

"I feel it my duty to tell you the good Lydia E. Pinkham's Vegetable Compound and Blood Purifier have done for me. Before I took them I was very nervous, had dull headaches, pains in back, and periods were irregular, I had been to several doctors, and they did me no good.

"Your medicine has made me well and strong. I can do most any kind of work without complaint, and my periods are all right.

"I am in better health than I ever was, and I know it is all due to your remedies. I recommend your advice and medicine to all who suffer."

It is to such girls that Mrs. Pinkham holds out a helping hand and extends a cordial invitation to correspond with her. She is daughter-in-law of Lydia E. Pinkham and for twenty-five years has been advising sick women free of charge. Her long record of success in treating woman's ills makes her letters of advice of untold value to every ailing working girl. Address, Mrs. Pinkham, Lynn, Mass.

Ring-Bone

There is no case so old or bad that we will not guarantee Fleming's Spavin and Ringbone Paste to remove the lameness and make the horse go sound. Money refunded if it ever fails. Easy to use and one to three 45-minute applications cure. Works just as well on Sidebone and Bone Spavin. Before ordering or buying any kind of a remedy for any kind of a blemish, write for a free copy of Fleming's Vest-Pocket Veterinary Adviser.

Ninety-six pages of veterinary information, with special attention to the treatment of blemishes. Readably bound, indexed and illustrated. Make a right beginning by sending for this book.

of the state the coolest part of the week occurred on Friday or Saturday; the lowest temperature was 33° at Norton on the 18th. The maximum temperature for the week occurred in the west portion of the State on the 16th and in the east portion on the 17th, except in the extreme southeastern counties where they occurred on the 18th. The maximum temperatures were 90° or above in the western half of the State, but below 90° in the eastern half except in Osage, Franklin, Coffey, Woodson, and Bourbon Counties; the highest temperature for the week was 95° at Toronto on the 18th. Showers have occurred in nearly every county of the State. Good showers occurred in the central northern counties with heavy rain in the northwestern part of Republic County. Good showers occurred in most of the southern counties with heavy rains in Harper, Sumner, Butler, Greenwood, and Woodson Counties. Good showers fell in Chase County and thence northeastward through Lyon, Osage, and Douglas Counties with heavy rain in Wyandotte County. Hamilton, Wallace, Thomas, and Norton Counties report no rain. Decatur, Washington, and Linn Counties report a trace of rain.

CONDITIONS IN DETAIL.

EASTERN DIVISION.

Allen.—It was a moderately warm week with strong southerly winds till Friday. Light showers fell on the 15th and 16th. Rain is very much needed. Three days were clear and the rest partly cloudy.

Alderson.—Uniformly warm weather prevailed. No rainfall occurred.

Athchison.—The week was very dry, only .03 of rain falling, and the sun being visible less than half the time. The first part of the week was characterized by high winds. Rain is needed badly.

Brown.—Three days were clear, two cloudy, and two partly cloudy. High winds prevailed the first four days. .02 of an inch of rain fell on the 15th. The dry weather is becoming serious.

Chase.—It was dry up to the 15th when a good rain fell. The highest temperature was 88° on the 17th and the lowest 52° on the 12th.

Chautauqua.—This has been a very pleasant week with light showers on the 15th and 16th. Maximum temperatures generally ranged in the eighties and minimum temperatures in the sixties.

Cherokee.—The week was warm and the days generally partly cloudy. A light shower fell on the 15th and .03 of an inch on the 18th.

Coffey.—The week was warm and dry. The highest temperature was 90° on the 17th and the lowest 55° on the 18th. The rainfall was .08 of an inch.

Crawford.—Only one light shower of .06 of an inch fell during the week. Maximum temperatures ranged in the eighties on all but one day and minimum temperatures in the sixties. All the days were clear.

Elk.—A good shower fell on the 15th and light ones on the 14th, 16th, and 18th, making the to-

tal for the week .06 of an inch. The temperature the first part of the week was about normal, the latter part above normal.

Franklin.—The week was warm and dry with only .01 of an inch of rain. The temperature exceeded eighty on five days and fell below 60° on only one morning.

Greenwood.—There was a fine rain of .90 of an inch on the 14th and light showers on four other days. The week was warm, the latter part being warmer than the first part.

Jefferson.—It is getting very dry. The rainfall for the week was only .06 of an inch. The weather has been very warm, the temperature being above 80° every day but one, and the minimum not falling below 60° any night.

Johnson.—The week has been warm, dry, and cloudy. A light shower of .03 of an inch fell on the 15th and a trace of rain on the 18th. The highest temperature was 87° on the 17th and the lowest 55° on the 19th.

Lambette.—The week was dry and windy up to the 18th when .03 of an inch of rain fell. The days were partly cloudy but rather warm.

Linn.—There was a good local rain in the southeast part of the county Friday afternoon, but only a trace fell during the week in the east central part. The temperature was uniformly high.

Lyon.—Rain fell on four days, the total for the week being .53 of an inch. Warm weather prevailed throughout the week.

Marshall.—Showers fell the first three days, the total being .07 of an inch. Three days were clear, three partly cloudy, and one cloudy. The temperature was uniformly high.

Osage.—Showers fell on four days as follows: 15th, .06; 16th, .08; 18th, .15; and 19th, .24. The highest temperature was 90° on the 17th and the lowest 60° on the 13th.

Riley.—Light showers fell on the 14th, 15th, and 16th. The weather was warm throughout the week.

Shawnee.—The week was warm and dry with southerly winds on six days and high winds on the 18th, 14th, 16th, and 17th. The temperature for the week averaged about 7° above normal daily. Only one light shower, .09 of an inch on the 15th, was received. Rain is very much needed.

Wilson.—The week has been partly cloudy and warm with a strong southerly wind most of the time, .07 of an inch of rain fell on the 15th and .05 on the 19th.

Woodson.—Showers fell on five days, the weekly total being 1.16 inches. The highest temperature was 92° on the 18th and the lowest 60° on the last three days.

Wyandotte.—On the whole the week was pleasant and seasonable and needed rainfall in the shape of a refreshing thunderstorm occurred on the evening of the 17th. During this storm hail fell at intervals, for ten minutes but no damage resulted therefrom. Light showers fell on the 15th and 19th.

MIDDLE DIVISION.

Barber.—Strong winds have been experienced. A thunderstorm occurred on the 17th. Light showers on five days have been very beneficial. The weather was warm all week.

Barton.—This has been a very windy week. Dust storms occurred on the 12th, 13th, and 16th, and thunderstorms on the 13th and 18th. Very

Clay.—Southerly winds prevailed on all but one day and temperatures were uniformly high, .05 of an inch of rain fell during the week.

Cloud.—The temperature ranged from 4° to 17° above normal every day. Four days were cloudy and three partly cloudy. Light showers fell on the 14th and 15th, the total being .04 of an inch.

Ellsworth.—Light showers fell in the northwestern part of the county the first of the week and heavy rains fell in the southern part. There was considerable sunshine and warm weather.

Ellsworth.—A light shower fell on the 13th and a good rain of .53 of an inch on the 15th. The weather was warm every day.

Harper.—The week was cool and pleasant with 1.85 inches of rain. There was a little fall on the 17th but no damage was done.

Harvey.—The week has been cloudy and threatening but only a small amount of rain has fallen.

Jewell.—Showers fell on the 13th, 14th, and 15th, the total being .56 of an inch. The weather was warm and generally clear.

Kingman.—Showers fell on every day but two, the total being .99 of an inch. There was considerable cloudiness and the weather was warm.

McPherson.—There was a refreshing rain of .40 of an inch on the 15th but more is needed. The temperature was moderate.

Ottawa.—It was a very warm, dry week with .01 of an inch of rain. More rain is needed. There was considerable cloudiness and the temperature was moderate.

Pawnee.—Strong southerly winds prevailed till the 17th when the wind shifted to the north. There were a few light scattered showers making about .13 of an inch.

Reno.—There were high southerly winds on the 12th, 13th, and 16th, and light showers on the 12th, 14th, 15th, and 18th, making a total of .18 of an inch. There was much cloudiness but the weather was warm.

Republican.—A trace of rain fell on the 13th, .02 on the 14th, and .02 on the 15th. The highest temperature was 87° on the 16th and the lowest 45° on the 18th.

Russell.—The days were uniformly warm, the highest temperature being 91° on the 16th and the lowest 53° on the 19th. Refreshing showers fell on three days, the total being .64 of an inch.

Saline.—Light but beneficial showers fell on the 14th and 15th, making a total of .03 of an inch. There were high winds on the 14th, 15th, and 16th. The weather was warm.

Sedgwick.—The cloudiness was above the average with showers on the 14th, 15th, and 16th, and sprinkles on the 13th and 18th. During the thunderstorm of the 17th a fine rain fell north and south of Wichita. The daily temperatures ranged from normal to 16° above normal.

Smith.—The week was warm. It was clear all week except on the 14th when we had half an inch of rain. The highest temperature was 87° on the 16th and the lowest 49° on the 15th.

Stafford.—Showers fell on the 13th, 14th, and 19th, making a total of half an inch of precipitation. The week was warm.

Summer.—Rain fell on four days. During a thunderstorm on the 17th, 1.30 inches of rain fell in less than an hour. The total rainfall for the week was 1.68 inches.

Washington.—Warm and clear weather prevailed. It was a dry week, only a trace of rain falling. The highest temperature was 85° on the 18th, and the lowest 50° on the 19th.

WESTERN DIVISION.

Decatur.—Warm, dry weather prevailed. Four days were clear and three partly cloudy. Only a trace of rain fell.

Ford.—.05 of an inch of rain fell on the 13th, .02 on the 14th and .02 on the 19th. The daily temperature ranged from 2° to 15° above normal. The weather was generally clear.

Hamilton.—It was a warm week with no rain. The highest temperature was 91° on the 16th and the lowest 44° on the 13th.

Lane.—With the exception of the 15th and 17th this has been a very warm week. A fine local shower fell on the 14th. The total rainfall for the week was .04 of an inch.

Norton.—It was a very warm, dry week with strong southerly winds. There was no rain but it is badly needed. The days were generally clear.

Scott.—Very beneficial rains fell on the 13th and 14th. The total precipitation was .79 of an inch. The highest temperature was 93° on the 16th and the lowest 49° on the 18th.

Thomas.—There were strong winds during the week but no rain fell. The highest temperature was 90° on the 16th and the lowest 44° on the 18th.

Trego.—On the 14th .39 of an inch of rain fell but no other precipitation occurred during the week. The weather was warm, the highest being 92° on the 16th and the lowest 49° on the 18th.

Wallace.—It was a very dry week with no rain and southerly winds most of the time. The maximum temperature was 90° on the 16th and the minimum 41° on the 18th.

OLDS ENGINES

There is no gas engine as simple as the Olds—Compare it with others and this statement is proved. The repairs cost practically nothing.

The Most Economical Engine

for pumping, sawing wood, feed grinding, churning and all farm work.

The reason why is interestingly told in our catalog mailed on request. Tell us your requirements and we will help you figure out what you need. Send for our catalog showing Type A (2-8 h.p.) Types K and N (12-1200 h.p.) used with our Gas Producer, it will reduce fuel cost 75 per cent.

Celebrated Picture Free
For 4c in stamps to pay cost of mailing we will also send you Rosa Bonheur's "Horse Fair," the most celebrated animal picture in the world, size 16 x 20, beautifully colored, suitable for framing.

Stock for sale. Write to E. L. Lindner and E. L. Waterman, Clay Center, Kan.

An exhibit which testified with waving banners and fluttering flags to the magnitude of Kansas manufacturing enterprise came into Ottawa this week in a shipment by special train of the largest single order of fence-wire ever executed by the Pueblo mills. The shipment is said to have been the largest of the kind ever made. The shipment was consigned to the Warner Fence Company, of Ottawa, for manufacture into the various kinds of fencing turned out by that institution. Twenty-seven cars, fully loaded, brought 675 tons of wire. The train, with the addition of special couches for the railroad officials and business men who accompanied it, made a day-

to do is to poultice the foot with bran and linseed-meal, keeping the poultice wet; as soon as pus forms it will break at the heel at the place where the frog is attached to the bars. The foot at this place is rather soft and allows the pus to escape. Failing to find the trouble in this location, let us hear from you again, as you may be able to notice additional symptoms which will aid in the diagnosis of the case.

Lumpy Jaw.—Is there any remedy for the lumpy jaw in cattle that can be given internally that will cure it? One of my neighbors told me he saw something of the kind in your paper.

Derby, Kansas. A. W. P.

Answer.—A similar inquiry was answered in the KANSAS FARMER of May 4, 1905, as follows:

"Lump jaw in cattle is caused by a fungus known as the Ray Fungus (actinomyces) which is found on fodder, gaining access to the mouth on the food. If any abrasion is in the mouth, this fungus readily develops in the gums and later on in the jaw bone, causing it to become honeycombed, with a formation of abscesses, the jaw becoming greatly enlarged—thus the name 'lump jaw.' Treatment consists of opening the swelling and injecting the pockets where the pus is, with a tincture of iodine daily; giving internally, one-half dram of iodide of potash in a pint of water daily for about two weeks; then withhold the medicine for a few days and begin again."

C. L. BARNES.

The Veterinarian

We cordially invite our readers to consult us when they desire information in regard to sick or lame animals, and thus assist us in making this Department one of the most interesting features of The Kansas Farmer. Kindly give the age, color, and sex of the animal, stating symptoms accurately, and how long standing, and what treatment, if any, has been resorted to. All replies through this column are free. In order to receive a prompt reply all letters for this Department should be signed with full name and should be addressed to the Veterinary Department of The Kansas Farmer, Topeka, Kans., or to Dr. C. L. Barnes, Veterinary Department, Kansas State Agricultural College, Manhattan, Kans.

If in addition to having the letter unanswered in The Kansas Farmer, no immediate answer is desired by mail, kindly enclose a 2-cent stamp. Write across top of letter: "To be answered in Kansas Farmer."

Cullions on Horse's Shoulder.—I have a horse that got his shoulder blistered while plowing; the blister was on right side of shoulder, and the size of my hand. I opened it at the bottom, and bathed it with hot water and arnica for ten days. It is about one-fourth the original size and is hard and calloused. How can I remove this callous?

Clearwater, Kans. S. P. T.

Answer.—I would advise cutting the callous part off the shoulder, then secure from a druggist the following: 1 ounce tannic acid, 2 ounces boracic acid, and 1 ounce acetanilid; mix and dust on wound daily.

Ailing Horse.—My 10-year-old horse is thin in flesh; his breath is foul at times; I feed him on corn and prairie hay; I do not work him much; he runs in pasture. I think there is something wrong with his stomach, but have done nothing for him.

A READER.

Rice County.

Answer.—If you will have the horse examined I think you will find that there is a bad tooth, and would therefore advise your having the teeth properly treated by a competent veterinarian.

Heifer Gives Bloody Milk.—I have a heifer that gives bloody milk; calf is a week old. What will cure the trouble?

J. E.

Lyons, Kans.

Answer.—If you will melt together 2 ounces of gum camphor and 4 ounces of lard, and stir until cool, then apply to your cow's udder, three times daily, I think you will remedy the trouble. Your cow has evidently had a little inflammation in the udder from some injury which has caused the bleeding.

Poll Evil and Ailing Chickens.—I have a mare that I think is getting poll evil.

Also have some good, healthy chickens that are looking spry. They break down and lose all control of their legs; they turn over after first day of illness and lay on the other side, but still look healthy. Look as though they were paralyzed in the back, but can use legs freely for kicking.

Jamestown, Kansas. O. W. C.

Answer.—(a) We are sending you press bulletin on fistulous withers and poll evil which we trust will give you the desired information.

(b) The only chickens I have ever known to act in this manner were those having crops bound from eating too much oats. Examine the crops, and if you find them full and hard make an incision in the skin over the crop, make a slit in the same so that the two cuts will not be in the same place, then empty the crop by inserting a finger. You may draw the outer incision together with thread and feed the fowl soft food for a few days.

It is possible that your fowls may have epilepsy, caused by intestinal parasites. It is characterized by fits. During the fit the fowl will make beating movements with its wings, its legs will draw up, and it will fall down and flutter around, but seldom dies. A few grains of bromide of potash or sulfur and turpentine given in the drinking water will prove beneficial in removing the worms.

Linne Mule.—My 5-year-old mule has been lame in hind leg for two weeks; holds leg up as though in great pain. I examined the foot carefully but could find nothing; the foot and leg is carried well forward and up. I think the trouble is in the hock joint, but no well-defined soreness was discovered. Am I correct in diagnosing the trouble as spavin?

A READER.

Leavenworth, Kans.

Answer.—From the fact that you did not find any soreness in the hock joint, and also that the mule carries foot well forward and up would largely remove the idea of the seat of the trouble being in the hock joint. From the history of the case I would be inclined to think the trouble is from a stone bruise, and before long you will notice a decided swelling above the foot and about the fetlock. In that event the best thing

CATTLE.

GALLOWAY BULLS—4 head, 16 to 18 months old, suitable for service. All registered. Address C. A. Kline, R. F. D., Tecumseh, Kans.

FARMERS!

There's Land Waiting For YOU In NEW ZEALAND

The Paradise of the Pacific; Sixteen Days Steam from San Francisco

THERE IS ROOM FOR THOUSANDS OF SETTLERS

Rich Soil. Abundance of Water. No Droughts. No Snow-bound Winters. Mild and Equable Climate. A Land of Peace and Plenty. New Zealand's WEALTH Per Head of Population is the Highest in the World.

ITS DEATH RATE IS THE LOWEST IN THE WORLD.

Government land is obtainable on easy terms, perpetual leasehold or freehold. Government assistance to new settlers. State loans to farmers at low rate of interest.

New Zealand is a magnificent dairyland, meat-raising, lumber and wool-growing country. Last year the produce of the farms of New Zealand totaled a value of one hundred million dollars. New Zealand's butter, wool and frozen mutton fetch the highest prices in the world's markets.

New Zealand Railways are owned by the Government. Cheap freight and passenger rates. Government and Municipal ownership of public utilities. Government Trust Offices, Insurance, Savings Banks, etc.; Government Sanatoria and Hot Mineral Water Spas.

New Zealand is a region of grand and novel scenery. It is largely visited by American tourists who escape the rigors of winter.

A land of splendid sport. Trout-fishing and Deer-stalking. Thousands of miles of angling waters carrying the biggest trout in the world.

It is SUMMER in New Zealand when WINTER in America. New Zealand's summer is cool and enjoyable for traveling. Comfortable hotels. Good Transportation. Cheap rates.

YOU WILL FIND OUT ALL ABOUT NEW ZEALAND

by dropping a postcard asking for information and literature to T. E. DONNE, Superintendent, Government Department of Tourist and Health Resorts, Mail Steamers from San Francisco to New Zealand Every Three Weeks.

HART & HOLLOWAY,

Butler, Missouri

\$5,000

Reward will be paid to any person who can find one atom of opium, chloral, morphine, cocaine, ether or chloroform in any form in any of Dr. Miles' Remedies.

This reward is offered because certain unscrupulous persons make false statements about these remedies. It is understood that this reward applies only to goods purchased in the open market, which have not been tampered with in any way.

Dr. Miles' remedies cure by their soothing, nourishing, strengthening and invigorating effects upon the nervous system, and not by paralyzing and weakening the nerves as would be the case if these drugs were used.

For this reason Dr. Miles' Anti-Pain Pills are universally considered the best pain remedy.

I have suffered for 25 years with severe pains in my head, heart and back, and have tried everything I could get and could not find any relief until I got a box of Dr. Miles' Anti-Pain Pills. I suffered as long as 12 hours at a time with such severe pains that I feared I would lose my mind. The Anti-Pain Pills gave me relief in from 10 to 20 minutes. I do not have to use Morphine any more. I wish you would publish this so that other sufferers may find relief."

L. A. WALKER.

R. F. D. No. 6, Salem, Ind. Dr. Miles' Anti-Pain Pills are sold by your druggist, who will guarantee that the first package will benefit. If it does, 25 cents. Never sold in bulk.

Miles Medical Co., Elkhart, Ind.

Gasoline Engine Superiority

When a man invests in a farm power, he owes it to himself to get the best that can be bought for the money.

The modern business farm can no longer be successfully operated without a power of some kind.

The best, most economical, and safest farm power is a gasoline engine.

The best engine is the

I. H. C. Gasoline Engine.

Why? Well, because it's so simple, easily kept in order and operated definitely. It develops the full rated horse power and sustains it against the heaviest load.

It is safer, cheaper and more efficient than steam power.

It is adaptable to any and every use requiring a power.

Among its many uses may be named:

Shelling, Husking and Shredding Corn; Grinding Feed; Cutting Dry Fodder and Ensilage; Pumping; Sawing Wood; Separating Cream, Etc.

I. H. C. engines are made in the following sizes and types:

Vertical, 2, 3, 5 Horse Power.

Horizontal, Portable and Stationary, 4, 6, 8, 10, 12, 15 Horse Power.

If interested in powers in any way, go to the International Local Agent and have him show you the I. H. C. gasoline engine, and supply you with catalogues, or write for further information.

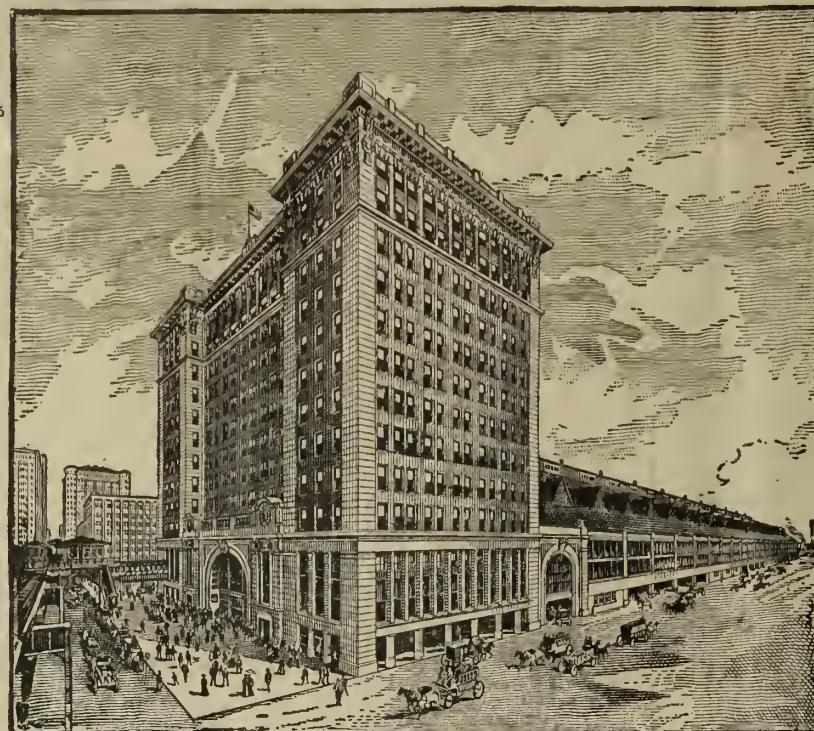

INTERNATIONAL HARVESTER COMPANY
OF AMERICA, CHICAGO, ILL., U. S. A.
(INCORPORATED)

La Salle
Street
Station,
Chicago

Only one
on the
Elevated
Loop

Used by Rock Island-Frisco Lines

Have YOU ever been in CHICAGO?

If so, you know the extremely convenient location of La Salle Street Station.

If you are a stranger in the city, however, it is of great importance that you learn about this magnificent and comparatively new terminal, used jointly by Rock Island-Frisco Lines—C. R. I. & P. Ry. and C. & E. I. R. R.

It is nearest the heart of the city—closely adjoining the business section—within easy walking distance of State Street shopping center and all the principal hotels.

Another advantage of entering the city through La Salle Street Station is the second-story viaduct directly connecting the main waiting-room with the Elevated Railroad loop—you can reach the North, Northwest, West or South sides of the city by elevated trains for a five cent fare without descending to the street. You thus avoid the dangers and delays of the great, crowded city.

The Rock Island right-of-way into Chicago is elevated for more than eight miles out through the suburbs. Prompt arrival at Chicago terminal is thus assured. Englewood Union Station, seven miles out, affords ready access to southern suburbs—all through trains stop there.

Where you will land is an item to consider.

JOHN SEBASTIAN, Passenger Traffic Manager, Rock Island-Frisco Lines, CHICAGO and ST. LOUIS.

The Southwest Limited

was the first train to give first-class service between Kansas City and Chicago. In service and equipment it has no equal. Your patronage is solicited on these two facts by the

Chicago, Milwaukee & St. Paul Railway

If you doubt the first fact compare the service of to-day with that before The Southwest Limited entered the field. If you doubt the second fact a trial trip to Chicago will convince you of its truth. The Southwest Limited leaves Union Station 5.55 p.m.; Grand Avenue 6.07 p.m. Arrives Union Station, Chicago, 8.20 a.m.
